to the wants and enjoyments of physical life, they have done so by the help of means with which they were furnished by the Grecian mind—the mother of civilization—and only pursued a little further the track which that had already pointed out. In the development of intellectual power, they will hardly bear comparison. Those noble republics in the pride of their strength and greatness, may have anticipated for themselves—as some of their poets did for them—an everlasting duration and predominance. But they could not have anticipated, that when they had fallen under barbarous arms, that when arts and civilization were lost, and the whole earth involved in darkness—the first light should break from their tombs—that in a renewed world, unconnected with them by ties of locality, language or descent, they should still be held the models of all that is profound in science, or elegant in literature,—all that is great in character, or elevated in imagination. And perhaps when England herself, who now leads the war with which we are on all sides threatened, shall have fulfilled her mission, and like the other glorious things of the earth, shall have passed away; when she shall have diffused her noble race and noble language, her laws, her literature and her civilization, over all quarters of the earth, and shall perhaps be overrun by some northern horde—sunk into an ignoble and anarchical democracy,* or subdued to the dominion of some Cæsar,—demagogue and despot,—then, in southern regions, there may be found many republics, triumphing in Grecian arts and civilization, and worthy of British descent and Roman institutions.

If after a time, when the mind and almost the memory of the republic were lost, Romans degenerated, they furnish conclusive evidence that this was owing not to their domestic, but to their political slavery. The same thing is observed over all the eastern monarchies; and so it must be, wherever property is insecure; and it is dangerous for a man to raise himself to such eminence, by intellectual or moral excellence, as would give him influence over his society. So it is in Egypt, and the other regions bordering the Mediterranean, which once comprehended the civilization of the world; where Carthage, Tyre and Phœnicia flourished. In short, the uncontradicted experience of the world is, that in southern States where good government and predial and domestic slavery are found, there are prosperity and greatness; where either of these conditions is wanting, degeneracy and barbarism. The former however is equally essential in all climates and under all institutions. And can we suppose it to be the design of the Creator, that these regions, constituting half of the earth's surface, and the more fertile half, and more capable of sustaining life, should be abandoned forever to depopulation and barbarism? Certain it is that they will never be reclaimed by the labor of freemen. In our own country, look at the lower valley of the Mississippi, which is capable of being made a far greater Egypt. In our own State, there are extensive tracts of the most fertile soil, which are capable of being made to swarm with life. These are at present pestilential swamps, and valueless, because there is abundance of other fertile soil in more favorable situa-

tions, which demand all and more than all the labor which our country can supply. Are these regions of fertility to be abandoned at once and forever to the alligator and tortoise—with here and there perhaps a miserable, shivering, crouching *free* black savage? Does not the finger of heaven itself seem to point to a race of men—not to be enslaved by us but already enslaved, and who will be in every way benefitted by the change of masters—to whom such climate is not ungenial, who though disposed to indolence are yet patient and capable of labor; on whose whole features, mind and character, nature has indelibly written—*slave*;—and indicate that we should avail ourselves of these in fulfilling the first great command to subdue and replenish the earth?

It is true that this labor will be dearer than that of northern countries, where under the name of freedom, they obtain cheaper and perhaps better slaves. Yet it is the best we can have, and this too has its compensation. We see it compensated at present by the superior value of our agricultural products. And this superior value they must probably always have. The southern climate admits of a greater variety of productions. Whatever is produced in northern climates, the same thing, or something equivalent, may be produced in the southern. But the northern have no equivalent for the products of southern climates. The consequence will be, that the products of southern regions will be demanded all over the civilized world. The agricultural products of northern regions are chiefly for their own consumption. They must therefore apply themselves to the manufacturing of articles of luxury, elegance, convenience or necessity,—which requires cheap labor—for the purpose of exchanging them with their southern neighbors. Thus nature herself indicates that agriculture should be the predominating employment in southern countries, and manufactures in northern. Commerce is necessary to both—but less indispensable to the southern, which produce within themselves a greater variety of things desirable to life. They will therefore have somewhat less of the commercial spirit. We must avail ourselves of such labor as we can command. The slave must labor and is inured to it; while the necessity of energy in his government, of watchfulness, and of preparation and power to suppress insurrection, added to the moral force derived from the habit of command, may help to prevent the degeneracy of the master.

The task of keeping down insurrection is commonly supposed, by those who are strangers to our institutions, to be a very formidable one. Even among ourselves, accustomed as we have been to take our opinions on this as on every other subject, ready formed from those whom we regarded as instructors, in the teeth of our own observation and experience; fears have been entertained which are absolutely ludicrous. We have been supposed to be nightly reposing over a mine, which may at any instant explode to our destruction. The first thought of a foreigner sojourning in one of our cities, who is awakened by any nightly alarm, is of servile insurrection and massacre. Yet if any thing is certain in human affairs, it is certain and from the most obvious considerations, that we are more secure in this respect than any civilized and fully peopled society upon the face of the earth. In every such society,

* I do not use the word democracy in the Athenian sense, but to describe the government in which the slave and his master have an equal voice in public affairs.

there is a much larger proportion than with us, of persons who have more to gain than to lose by the overthrow of government, and the embroiling of social order. It is in such a state of things that those who were before at the bottom of society, rise to the surface. From causes already considered, they are peculiarly apt to consider their sufferings the result of injustice and misgovernment, and to be rancorous and embittered accordingly. They have every excitement therefore of resentful passion, and every temptation which the hope of increased opulence, or power or consideration can hold out, to urge them to innovation and revolt. Supposing the same disposition to exist in equal degree among our slaves, what are their comparative means or prospect of gratifying it? The poor of other countries are called free. They have, at least, no one interested to exercise a daily and nightly superintendence and control over their conduct and actions. Emissaries of their class may traverse, unchecked, every portion of the country, for the purpose of organizing insurrection. From their greater intelligence, they have greater means of communicating with each other. They may procure and secrete arms. It is not alone the ignorant, or those who are commonly called the poor, that will be tempted to revolution. There will be many disappointed men, and men of desperate fortune—men perhaps of talent and daring—to combine with them and direct their energies. Even those in the higher ranks of society, who contemplate no such result, will contribute to it, by declaiming on their hardships and rights.

With us, it is almost physically impossible, that there should be any very extensive combination among the slaves. It is absolutely impossible that they should procure and conceal efficient arms. Their emissaries traversing the country, would carry their commission on their foreheads. If we suppose among them an individual of sufficient talent and energy to qualify him for a revolutionary leader, he could not be so extensively known as to command the confidence, which would be necessary to enable him to combine and direct them. Of the class of freemen, there would be no individual so poor or degraded (with the exception perhaps of here and there a reckless and desperate outlaw and felon) who would not have much to lose by the success of such an attempt; every one therefore would be vigilant and active to detect and suppress it. Of all impossible things, one of the most impossible would be a successful insurrection of our slaves, originating with themselves.

Attempts at insurrection have indeed been made—excited, as we believe, by the agitation of the abolitionists and declaimers on slavery; but these have been in every instance promptly suppressed. We fear not to compare the riots, disorder, revolt and bloodshed which have been committed in our own, with those of any other civilized communities, during the same lapse of time. And let it be observed under what extraordinary circumstances our peace has been preserved. For the last half century, one half of our population has been admonished in terms the most calculated to madden and excite, that they are the victims of the most grinding and cruel injustice and oppression. We know that these exhortations continually reach them, through a thousand channels which we cannot detect, as if carried by the birds of the air—and what human being,

especially when unfavorably distinguished by outward circumstances, is not ready to give credit when he is told that he is the victim of injustice and oppression! In effect, if not in terms, they have been continually exhorted to insurrection. The master has been painted a criminal, tyrant and robber, justly obnoxious to the vengeance of God and man, and they have been assured of the countenance and sympathy, if not of the active assistance of all the rest of the world. We ourselves have in some measure pleaded guilty to the impeachment. It is not long since a great majority of our free population, servile to the opinions of those whose opinions they had been accustomed to follow, would have admitted slavery to be a great evil, unjust and indefensible in principle, and only to be vindicated by the stern necessity which was imposed upon us. Thus stimulated by every motive and passion which ordinarily actuate human beings—not as to a criminal enterprise, but as to something generous and heroic—what has been the result? A few imbecile and uncombined plots—in every instance detected before they broke out into action, and which perhaps if undetected would never have broken into action. One or two sudden, unpremeditated attempts, frantic in their character, if not prompted by actual insanity, and these instantly crushed. As it is, we are not less assured of safety, order and internal peace, than any other people; and but for the pertinacious and fanatical agitation of the subject, would be much more so.

This experience of security, however, should admonish us of the folly and wickedness of those who have sometimes taken upon themselves to supersede the regular course of law, and by rash and violent acts to punish supposed disturbers of the peace of society. This can admit of no justification or palliation whatever. Burke I think somewhere remarks something to this effect,—that when society is in the last stage of depravity—when all parties are alike corrupt, and all wicked and unjustifiable in their measures and objects, a good man may content himself with standing neuter, a sad and disheartened spectator of the conflict between the rival vices. But are we in this wretched condition? It is fearful to see with what avidity the worst and most dangerous characters of society seize on the occasion of obtaining the countenance of better men, for the purpose of throwing off the restraints of the law. It is always these who are most zealous and forward in constituting themselves the protectors of the public peace. To such men—men without reputation or principle, or stake in society—disorder is the natural element. In that, desperate fortunes and the want of all moral principle and moral feeling constitute power. They are eager to avenge themselves upon society. Anarchy is not so much the absence of government as the government of the worst—not aristocracy but kakistocracy—a state of things, which to the honor of our nature, has seldom obtained amongst men, and which perhaps was only fully exemplified during the worst times of the French revolution, when that horrid hell burnt with its most lurid flame. In such a state of things, to be accused is to be condemned—to protect the innocent is to be guilty; and what perhaps is the worst effect, even men of better nature, to whom their own deeds are abhorrent, are goaded by terror to be forward and emulous in deeds of guilt and violence.

The scenes of lawless violence which have been acted in some portions of our country, rare and restricted as they have been, have done more to tarnish its reputation than a thousand libels. They have done more to discredit, and if any thing could, to endanger, not only our domestic, but our republican institutions, than the abolitionists themselves. Men can never be permanently and effectually disgraced but by themselves, and rarely endangered but by their own injudicious conduct, giving advantage to the enemy. Better, far better, would it be to encounter the dangers with which we are supposed to be threatened, than to employ such means for averting them. But the truth is, that in relation to this matter, so far as respects actual insurrection, when alarm is once excited, danger is absolutely at an end. Society can then employ legitimate and more effectual measures for its own protection. The very commission of such deeds, is proof that they are unnecessary. Let those who attempt them then, or make any demonstration towards them, understand that they will meet only the discountenance and abhorrence of all good men, and the just punishment of the laws they have dared to outrage.

It has commonly been supposed, that this institution will prove a source of weakness in relation to military defence against a foreign enemy. I will venture to say that in a slave holding community, a larger military force may be maintained permanently in the field, than in any State where there are not slaves. It is plain that almost the whole of the able bodied free male population, making half of the entire able bodied male population, may be maintained in the field, and this without taking in any material degree from the labor and resources of the country. In general the labor of our country is performed by slaves. In other countries, it is their laborers that form the material of their armies. What proportion of these can be taken away without fatally crippling their industry and resources? In the war of the revolution, though the strength of our State was wasted and paralyzed by the unfortunate divisions which existed among ourselves, yet it may be said with general truth, that every citizen was in the field and acquired much of the qualities of the soldier.

It is true that this advantage will be attended with its compensating evils and disadvantages; to which we must learn to submit, if we are determined on the maintenance of our institutions. We are, as yet, hardly at all aware how little the maxims and practices of modern civilized governments will apply to us. Standing armies, as they are elsewhere constituted, we cannot have; for we have not, and for generations cannot have, the materials out of which they are to be formed. If we should be involved in serious wars, I have no doubt but that some sort of conscription, requiring the services of all citizens for a considerable term, will be necessary. Like the people of Athens, it will be necessary that every citizen should be a soldier, and qualified to discharge efficiently the duties of a soldier. It may seem a melancholy consideration, that an army so made up should be opposed to the disciplined mercenaries of foreign nations. But we must learn to know our true situation. But may we not hope, that made up of superior materials, of men having home and country to defend; inspired by higher pride of character, of greater

intelligence, and trained by an effective, though honorable discipline, such an army will be more than a match for mercenaries? The efficiency of an army is determined by the qualities of its officers, and may we not expect to have a greater proportion of men better qualified for officers, and possessing the true spirit of military command? And let it be recollected that if there were otherwise reason to apprehend danger from insurrection, there will be the greatest security when there is the largest force on foot within the country. Then it is that any such attempt would be most instantly and effectually crushed.

And perhaps a wise foresight should induce our State to provide, that it should have within itself such military knowledge and skill as may be sufficient to organize, discipline and command armies, by establishing a military academy or school of discipline. The school of the militia will not do for this. From the general opinion of our weakness, if our country should at any time come into hostile collision, we shall be selected for the point of attack; making us, according to Mr. Adams' anticipation, the Flanders of the United States. Come from what quarter it may, the storm will fall upon us. It is known that lately when there was apprehension of hostility with France, the scheme was instantly devised of invading the southern States and organizing insurrection. In a popular English periodical work, I have seen the plan suggested by an officer of high rank and reputation in the British army, of invading the southern States at various points and operating by the same means. He is said to be a gallant officer, and certainly had no conception that he was devising atrocious crime, as alien to the true spirit of civilized warfare, as the poisoning of streams and fountains. But the folly of such schemes is no less evident than their wickedness. Apart from the consideration of that which experience has most fully proved to be true—that in general their attachment and fidelity to their masters is not to be shaken, and that from sympathy with the feelings of those by whom they are surrounded, and from whom they derive their impressions, they contract no less terror and aversion towards an invading enemy; it is manifest that this resource would be an hundred fold more available to us than to such an enemy. They are already in our possession, and we might at will arm and organize them in any number that we might think proper. The Helots were a regular constituent part of the Spartan armies. Thoroughly acquainted with their characters and accustomed to command them, we might use any strictness of discipline which would be necessary to render them effective, and from their habits of subordination already formed, this would be a task of less difficulty. Though morally most timid, they are by no means wanting in physical strength of nerve. They are excitable by praise; and, directed by those in whom they have confidence, would rush fearlessly and unquestioning upon any sort of danger. With white officers and accompanied by a strong white cavalry, there are no troops in the world from whom there would be so little reason to apprehend insubordination or mutiny.

This I admit might be a dangerous resource, and one not to be resorted to but in great extremity. But I am supposing the case of our being driven to extremity. It might be dangerous to disband such an army, and reduce them with the habits of soldiers, to their former

condition of laborers. It might be found necessary, when once embodied to keep them so, and subject to military discipline—a permanent standing army. This in time of peace would be expensive, if not dangerous. Or if at any time we should be engaged in hostilities with our neighbors, and it were thought advisable to send such an army abroad to conquer settlements for themselves, the invaded regions might have occasion to think that the scourge of God was again let loose to afflict the earth.

President Dew has very fully shown how utterly vain are the fears of those, who though there may be no danger for the present, yet apprehend great danger for the future, when the number of slaves shall be greatly increased. He has shown that the larger and more condensed the society becomes, the easier it will be to maintain subordination, supposing the relative numbers of the different classes to remain the same—or even if there should be a very disproportionate increase of the enslaved class. Of all vain things, the vainest and that in which man most shows his impotence and folly, is the taking upon himself to provide for a very distant future—at all events by any material sacrifice of the present. Though experience has shown that revolutions and political movements—unless when they have been conducted with the most guarded caution and moderation—have generally terminated in results just the opposite of what was expected from them: the angry ape will still play his fantastic tricks, and put in motion machinery, the action of which he no more comprehends or foresees than he comprehends the mysteries of infinity. The insect that is borne upon the current, will fancy that he directs its course. Besides the fear of insurrection and servile war, there is also alarm lest when their numbers shall be greatly increased, their labor will become utterly unprofitable, so that it will be equally difficult for the master to retain and support them, or to get rid of them. But at what age of the world is this likely to happen? At present, it may be said that almost the whole of the southern portion of this continent is to be subdued to cultivation; and in the order of Providence, this is the task allotted to them. For this purpose, more labor will be required for generations to come than they will be able to supply. When that task is accomplished, there will be many objects to which their labor may be directed.

At present they are employed in accumulating individual wealth, and this in one way, to wit, as agricultural laborers—and this is perhaps the most useful purpose to which their labor can be applied. The effect of slavery has not been to counteract the tendency to dispersion, which seems epidemical among our countrymen, invited by the unbounded extent of fertile and unexhausted soil, though it counteracts many of the evils of dispersion. All the customary trades, professions and employments, except the agricultural, require a condensed population for their profitable exercise. The agriculturist who can command no labor but that of his own hands or that of his family, must remain comparatively poor and rude. He who acquires wealth by the labor of slaves, has the means of improvement for himself and his children. He may have a more extended intercourse, and consequently means of information and refinement, and may seek education for his children where it may be found. I say, what is obvi-

ously true, that he has the means of obtaining those advantages; but I say nothing to palliate or excuse the conduct of him, who having such means neglects to avail himself of them.

I believe it to be true, that in consequence of our dispersion, though individual wealth is acquired, the face of the country is less adorned and improved by useful and ornamental public works, than in other societies of more condensed population, where there is less wealth. But this is an effect of that, which constitutes perhaps our most conspicuous advantage. Where population is condensed, they must have the evils of condensed population, and among these is the difficulty of finding profitable employment for capital. He who has accumulated even an inconsiderable sum, is often puzzled to know what use to make of it. Ingenuity is therefore tasked to cast about for every enterprise which may afford a chance of profitable investment. Works useful and ornamental to the country, are thus undertaken and accomplished, and though the proprietors may fail of profit, the community no less receives the benefit. Among us, there is no such difficulty. A safe and profitable method of investment is offered to every one who has capital to dispose of, which is further recommended to his feelings by the sense of independence and the comparative leisure, which the employment affords to the proprietor engaged in it. It is for this reason that few of our citizens engage in the pursuits of commerce. Though these may be more profitable, they are also more hazardous and more laborious.

When the demand for agricultural labor shall be fully supplied, then of course the labor of slaves will be directed to other employments and enterprises. Already it begins to be found, that in some instances it may be used as profitably in works of public improvement. As it becomes cheaper and cheaper, it will be applied to more various purposes and combined in larger masses. It may be commanded and combined with more facility than any other sort of labor; and the laborer, kept in stricter subordination, will be less dangerous to the security of society than in any other country, which is crowded and overstocked with a class of what are called free laborers. Let it be remembered that all the great and enduring monuments of human art and industry—the wonders of Egypt—the everlasting works of Rome—were created by the labor of slaves. There will come a stage in our progress when we shall have facilities for executing works as great as any of these—more useful than the pyramids—not less magnificent than the sea of Meveria. What the end of all is to be; what mutations lie hid in the womb of the distant future; to what convulsions our societies may be exposed—whether the master, finding it impossible to live with his slaves, may not be compelled to abandon the country to them—of all this it were presumptuous and vain to speculate.

I have hitherto, as I proposed, considered it as a naked, abstract question of the comparative good and evil of the institution of slavery. Very far different indeed is the practical question presented to us, when it is proposed to get rid of an institution which has interwoven itself with every fibre of the body politic; which has formed the habits of our society, and is consecrated by the usage of generations. If this be not a vicious prescription, which the laws of God forbid to ripen into

right, it has a just claim to be respected by all tribunals of man. If the negroes were now free and it were proposed to enslave them, then it would be incumbent on those who proposed the measure, to show clearly that their liberty was incompatible with the public security. When it is proposed to innovate on the established state of things, the burden is on those who propose the innovation, to show that advantage will be gained from it. There is no reform, however necessary, wholesome or moderate, which will not be accompanied with some degree of inconvenience, risk or suffering. Those who acquiesce in the state of things which they found existing, can hardly be thought criminal. But most deeply criminal are they, who give rise to the enormous evil with which great revolutions in society are always attended, without the fullest assurance of the greater good to be ultimately obtained. But if it can be made to appear, even probably, that no good will be obtained, but that the results will be evil and calamitous as the process, what can justify such innovations? No human being can be so mischievous—if acting consciously, none can be so wicked—as those who finding evil in existing institutions, rush blindly upon change, unforeseeing and reckless of consequences, and leaving it to chance or fate to determine whether the end shall be improvement, or greater and more intolerable evil. Certainly the instincts of nature prompt us to resist intolerable oppression. For this resistance no rule can be prescribed, but it must be left to the instincts of nature. To justify it, however, the insurrectionists should at least have a reasonable probability of success, and be assured that their condition will be improved by success. But most extraordinary is it, when those who complain and clamor, are not those who are supposed to feel the oppression, but persons at a distance from them, and who can hardly at all appreciate the good or evil of their situation. It is the unalterable condition of humanity, that men must achieve civil liberty for themselves. The assistance of allies has sometimes enabled nations to repel the attacks of foreign power; never to conquer liberty as against their own internal government.

In one thing I concur with the abolitionists; that if emancipation is to be brought about, it is better that it should be immediate and total. But let us suppose it to be brought about in any manner, and then inquire what would be the effects.

The first and most obvious effect, would be to put an end to the cultivation of our great southern staples. And this would be equally the result, if we suppose the emancipated negroes to be in no way distinguished from the free laborers of other countries, and that their labor would be equally effective. In that case, they would soon cease to be laborers for hire, but would scatter themselves over our unbounded territory, to become independent land owners themselves. The cultivation of the soil on an extensive scale, can only be carried on where there are slaves, or in countries superabounding with free labor. No such operations are carried on in any portions of our own country where there are not slaves. Such are carried on in England, where there is an overflowing population and intense competition for employment. And our institutions seem suited to the exigencies of our respective situations. There, a much greater number of laborers

is required at one season of the year than at another, and the farmer may enlarge or diminish the quantity of labor he employs, as circumstances may require. Here, about the same quantity of labor is required at every season, and the planter suffers no inconvenience from retaining his laborers throughout the year. Imagine an extensive rice or cotton plantation cultivated by free laborers, who might perhaps strike for an increase of wages, at a season when the neglect of a few days would insure the destruction of the whole crop. Even if it were possible to procure laborers at all, what planter would venture to carry on his operations under such circumstances? I need hardly say that these staples cannot be produced to any extent, where the proprietor of the soil cultivates it with his own hands. He can do little more than produce the necessary food for himself and his family.

And what would be the effect of putting an end to the cultivation of these staples, and thus annihilating at a blow, two-thirds or three-fourths of our foreign commerce? Can any sane mind contemplate such a result without terror? I speak not of the utter poverty and misery to which we ourselves would be reduced, and the desolation which would overspread our own portion of the country. Our slavery has not only given existence to millions of slaves within our own territories; it has given the means of subsistence and therefore existence to millions of freemen in our confederate States, enabling them to send forth their swarms, to overspread the plains and forests of the west, and appear as the harbingers of civilization. The products of the industry of those States, are, in general, similar to those of the rest of the civilized world, and are little demanded in their markets. By exchanging them for ours, which are every where sought for, the people of these States are enabled to acquire all the products of art and industry, all that contributes to convenience or luxury, or gratifies the taste or the intellect, which the rest of the world can supply. Not only on our own continent, but on the other, they have given existence to hundreds of thousands, and the means of comfortable subsistence to millions. A distinguished citizen of our own State, than whom none can be better qualified to form an opinion, has lately stated that our great staple, cotton, has contributed more than any thing else of later times to the progress of civilization. By enabling the poor to obtain cheap and becoming clothing, it has inspired a taste for comfort, the first stimulus to civilization. Does not *self defence* then demand of us, steadily to resist the abrogation of that which is productive of so much good? It is more than *self defence*. It is to defend millions of human beings, who are far removed from us, from the intensest suffering, if not from being struck out of existence. It is the defence of human civilization.

But this is but a small part of the evil which would be occasioned. After President Dew, it is unnecessary to say a single word on the practicability of colonizing our slaves. The two races, so widely separated from each other by the impress of nature, must remain together in the same country. Whether it be accounted the result of prejudice or reason, it is certain that the two races will not be blended together, so as to form a homogeneous population. To one who knows any thing of the nature of man and human society, it would be unnecessary to argue that this state of things cannot

continue; but that one race must be driven out by the other, or exterminated, or again enslaved. I have argued on the supposition that the emancipated negroes would be as efficient as other free laborers. But whatever theorists, who know nothing of the matter, may think proper to assume, we well know that this would not be so. We know that nothing but the coercion of slavery can overcome their propensity to indolence, and that not one in ten would be an efficient laborer. Even if this disposition were not grounded in their nature, it would be a result of their position. I have somewhere seen it observed, that to be degraded by opinion, is a thousand fold worse, so far as the feelings of the individual are concerned, than to be degraded by the laws. They would be thus degraded, and this feeling is incompatible with habits of order and industry. Half our population would at once be paupers. Let an inhabitant of New York or Philadelphia conceive of the situation of their respective States, if one half of their population consisted of free negroes. The tie which now connects them, being broken, the different races would be estranged from each other, and hostility would grow up between them. Having the command of their own time and actions, they could more effectually combine insurrection, and provide the means of rendering it formidable. Released from the vigilant superintendence which now restrains them, they would infallibly be led from petty to greater crimes, until all life and property would be rendered insecure. Aggression would beget retaliation, until open war—and that a war of extermination—were established. From the still remaining superiority of the white race, it is probable that they would be the victors, and if they did not exterminate, they must again reduce the others to slavery—when they could be no longer fit to be either slaves or freemen. It is not only in self defence, in defence of our country and of all that is dear to us, but in defence of the slaves themselves, that we refuse to emancipate them.

If we suppose them to have political privileges, and to be admitted to the elective franchise, still worse results may be expected. It is hardly necessary to add any thing to what has been said by Mr. Paulding on this subject, who has treated it fully. It is already known, that if there be a class unfavorably distinguished by any peculiarity from the rest of society, this distinction forms a tie which binds them to act in concert, and they exercise more than their due share of political power and influence—and still more, as they are of inferior character and looser moral principle. Such a class form the very material for demagogues to work with. Other parties court them and concede to them. So it would be with the free blacks in the case supposed. They would be used by unprincipled politicians of irregular ambition, for the advancement of their schemes, until they should give them political power and importance beyond even their own intentions. They would be courted by excited parties in their contests with each other. At some time, they may perhaps attain political ascendancy, and this is more probable, as we may suppose that there will have been a great emigration of whites from the country. Imagine the government of such legislators. Imagine then the sort of laws that will be passed, to confound the invidious distinction which has been so long assumed over them, and if possible to

obliterate the every memory of it. These will be resisted. The blacks will be tempted to avenge themselves by oppression and proscription of the white race, for their long superiority. Thus matters will go on, until universal anarchy, or kakistocracy, the government of the worst, is fully established. I am persuaded that if the spirit of evil should devise to send abroad upon the earth all possible misery, discord, horror and atrocity, he could contrive no scheme so effectual as the emancipation of negro slaves within our country.

The most feasible scheme of emancipation, and that which I verily believe would involve the least danger and sacrifice, would be that the entire white population should emigrate, and abandon the country to their slaves. Here would be triumph to philanthropy. This wide and fertile region would be again restored to ancient barbarism—to the worst of all barbarism—barbarism corrupted and depraved by intercourse with civilization. And this is the consummation to be wished, upon a speculation, that in some distant future age, they may become so enlightened and improved, as to be capable of sustaining a position among the civilized races of the earth. But I believe moralists allow men to defend their homes and their country, even at the expense of the lives and liberties of others.

Will any philanthropist say that the evils, of which I have spoken, would be brought about only by the obduracy, prejudices and overweening self estimation of the whites in refusing to blend the races by marriage, and so create an homogeneous population. But what if it be not prejudice, but truth, and nature, and right reason, and just moral feeling? As I have before said, throughout the whole of nature, like attracts like, and that which is unlike repels. What is it that makes so unspeakably loathsome, crimes not to be named, and hardly alluded to? Even among the nations of Europe, so nearly homogeneous, there are some peculiarities of form and feature, mind and character, which may be generally distinguished by those accustomed to observe them. Though the exceptions are numerous, I will venture to say that not in one instance in a hundred, is the man of sound and unsophisticated tastes and propensities so likely to be attracted by the female of a foreign stock, as by one of his own, who is more nearly conformed to himself. Shakspeare spoke the language of nature, when he made the Venetian senator attribute to the effect of witchcraft, Desdemona's passion for Othello—though, as Coleridge has said, we are to conceive of him not as a negro, but as a high bred, Moorish chief.

If the negro race, as I have contended, be inferior to our own in mind and character, marked by inferiority of form and features, then ours would suffer deterioration from such intermixture. What would be thought of the moral conduct of the parent who should voluntarily transmit disease, or fatuity, or deformity to his offspring? If man be the most perfect work of the Creator, and the civilized European man the most perfect variety of the human race, is he not criminal who would desecrate and deface God's fairest work; estranging it further from the image of himself, and conforming it more nearly to that of the brute? I have heard it said, as if it afforded an argument, that the African is as well satisfied of the superiority of his own complexion, form and features, as we can be of ours. If this were true,

as it is not, would any one be so recreant to his own civilization, as to say that his opinion ought to weigh against ours—that there is no universal standard of truth and grace and beauty—that the Hottentot Venus may perchance possess as great perfection of form as the Medicean? It is true, the licentious passions of men overcome the natural repugnance, and find transient gratification in intercourse with females of the other race. But this is a very different thing from making her the associate of life, the companion of the bosom and the hearth. Him who would contemplate such an alliance for himself, or regard it with patience, when proposed for a son, or daughter, or sister, we should esteem a degraded wretch—with justice, certainly, if he were found among ourselves—and the estimate would not be very different if he were found in Europe. It is not only in defence of ourselves, of our country and of our own generation, that we refuse to emancipate our slaves, but to defend our posterity and race from degeneracy and degradation.

Are we not justified then in regarding as criminals, the fanatical agitators whose efforts are intended to bring about the evils I have described? It is sometimes said that their zeal is generous and disinterested, and that their motives may be praised, though their conduct be condemned. But I have little faith in the good motives of those who pursue bad ends. It is not for us to scrutinize the hearts of men, and we can only judge of them by the tendency of their actions. There is much truth in what was said by Coleridge: "I have never known a trader in philanthropy who was not wrong in heart somehow or other. Individuals so distinguished, are usually unhappy in their family relations—men not benevolent or beneficent to individuals, but almost hostile to them, yet lavishing money and labor and time on the race—the abstract notion." The prurient love of notoriety actuates some. There is much luxury in sentiment, especially if it can be indulged at the expense of others; and if there be added some share of envy or malignity, the temptation to indulgence is almost irresistible. But certainly they may be justly regarded as criminal, who obstinately shut their eyes and close their ears to all instruction with respect to the true nature of their actions.

It must be manifest to every man of sane mind, that it is impossible for them to achieve ultimate success; even if every individual in our country, out of the limits of the slave holding States, were united in their purposes. They cannot have even the miserable triumph of St. Domingo—of advancing through scenes of atrocity, blood and massacre, to the restoration of barbarism. They may agitate and perplex the world for a time. They may excite to desperate attempts and particular acts of cruelty and horror, but these will always be suppressed or avenged at the expense of the objects of their truculent philanthropy. But short of this, they can hardly be aware of the extent of the mischief they perpetrate. As I have said, their opinions, by means to us inscrutable, do very generally reach our slave population. What human being, if unfavorably distinguished by outward circumstances, is not ready to believe, when he is told, that he is the victim of injustice? Is it not cruelty to make men restless and dissatisfied in their condition, when no effort of theirs can alter it? The greatest injury is done to their characters, as well

as to their happiness. Even if no such feelings or designs should be entertained or conceived by the slave, they will be attributed to him by the master, and all his conduct scanned with a severe and jealous scrutiny. Thus distrust and aversion are established, where, but for mischievous interference, there would be confidence and good will, and a sterner control is exercised over the slave who thus becomes the victim of his cruel advocates.

An effect is sometimes produced on the minds of slave holders, by the publications of the self styled philanthropists, and their judgments staggered and consciences alarmed. It is natural that the oppressed should hate the oppressor. It is still more natural that the oppressor should hate his victim. Convince the master that he is doing injustice to his slave, and he at once begins to regard him with distrust and malignity. It is a part of the constitution of the human mind, that when circumstances of necessity or temptation induce men to continue in the practice of what they believe to be wrong, they become desperate and reckless of the degree of wrong. I have formerly heard of a master who accounted for his practicing much severity upon his slaves, and exacting from them an unusual degree of labor, by saying that the thing (slavery) was altogether wrong, and therefore it was well to make the greatest possible advantage out of it. This agitation occasions some slave holders to hang more loosely on their country. Regarding the institution as of questionable character, condemned by the general opinion of the world, and one which must shortly come to an end, they hold themselves in readiness to make their escape from the evil which they anticipate. Some sell their slaves to new masters (always a misfortune to the slave) and remove themselves to other societies, of manners and habits uncongenial to their own. And though we may suppose that it is only the weak and the timid, who are liable to be thus affected, still it is no less an injury and public misfortune. Society is kept in an unquiet and restless state, and every sort of improvement is retarded.

Some projectors suggest the education of slaves, with a view to prepare them for freedom—as if there were any method of a man's being educated to freedom, but by himself. The truth is, however, that supposing that they are shortly to be emancipated, and that they have the capacities of any other race, they are undergoing the very best education which it is possible to give. They are in the course of being taught habits of regular and patient industry, and this is the first lesson which is required. I suppose, that their most zealous advocates would not desire that they should be placed in the high places of society immediately upon their emancipation, but that they should begin their course of freedom as laborers, and raise themselves afterwards as their capacities and characters might enable them. But how little would what are commonly called the rudiments of education, add to their qualifications as laborers? But for the agitation which exists, however, their education would be extended further than this. There is a constant tendency in our society to extend the sphere of their employments, and consequently to give them the information which is necessary to the discharge of those employments. And this for the most obvious reason; it promotes the master's inte-

rest. How much would it add to the value of a slave, that he should be capable of being employed as a clerk, or be able to make calculations as a mechanic? In consequence, however, of the fanatical spirit which has been excited, it has been thought necessary to repress this tendency by legislation, and to prevent their acquiring the knowledge of which they might make a dangerous use. If this spirit were put down, and we restored to the consciousness of security, this would be no longer necessary, and the process of which I have spoken would be accelerated. Whenever indications of superior capacity appeared in a slave, it would be cultivated; gradual improvement would take place, until they might be engaged in as various employments as they were among the ancients—perhaps even liberal ones. Thus, if in the adorable providence of God, at a time and in a manner which we can neither foresee nor conjecture, they are to be rendered capable of freedom, and to enjoy it, they would be prepared for it in the best and most effectual, because in the most natural and gradual manner. But fanaticism hurries to its effect at once. I have heard it said, God does good, but it is by imperceptible degrees; the Devil is permitted to do evil, and he does it in a hurry. The beneficent processes of nature are not apparent to the senses. You cannot see the plant grow or the flower expand. The volcano, the earthquake and the hurricane, do their work of desolation in a moment. Such would be the desolation, if the schemes of fanatics were permitted to have effect. They do all that in them lies, to thwart the beneficent purposes of Providence. The whole tendency of their efforts is to aggravate present suffering, and to cut off the chance of future improvement; and in all their bearings and results, they have produced, and are likely to produce, nothing but “pure, unmixed, dephlegmated, defecated evil.”

If Wilberforce or Clarkson were living, and it were inquired of them “Can you be sure that you have promoted the happiness of a single human being?” I imagine that, if they considered conscientiously, they would find it difficult to answer in the affirmative. If it were asked “Can you be sure that you have not been the cause of suffering, misery and death to thousands?”—when we recollect that they probably stimulated the exertions of the *amis des noirs* in France, and that through the efforts of these, the horrors of St. Domingo were perpetrated, I think they must hesitate long to return a decided negative. It might seem cruel, if we could, to convince a man who has devoted his life to what he esteemed a good and generous purpose, that he has been doing only evil—that he has been worshipping a horrid fiend, in the place of the true God. But fanaticism is in no danger of being convinced. It is one of the mysteries of our nature, and of the divine government, how utterly disproportioned to each other, are the powers of doing evil and of doing good. The poorest and most abject instrument, that is utterly imbecile for any purpose of good, seems sometimes endowed with almost the powers of omnipotence for mischief. A mole may inundate a province—a spark from a forge may conflagrate a city—a whisper may separate friends; a rumor may convulse an empire—but when we would do benefit to our race or country, the purest and most chastened motives, the most patient thought and labor, with the humblest self distrust, are hardly sufficient to

assure us that the results may not disappoint our expectations, and that we may not do evil instead of good. But are we therefore to refrain from efforts to benefit our race and country? By no means: but these motives, this labor and self distrust, are the only conditions upon which we are permitted to hope for success. Very different indeed is the course of those, whose precipitate and ignorant zeal would overturn the fundamental institutions of society, uproar its peace, and endanger its security, in pursuit of a distant and shadowy good, of which they themselves have formed no definite conception—whose atrocious philosophy would sacrifice a generation—and more than one generation—for an hypothesis.

ODDS AND ENDS.

To Mr. T. W. WHITE,

Editor of the Southern Literary Messenger.

I have been, for many months past, “in a peck of troubles,” lest my non-appearance among your correspondents might realize, in my own case, the old adage, “out of sight out of mind.” But no man above the grade of a brute beast is willing to be forgotten by his fellow men,—especially by that portion of them with whom he has long maintained friendly intercourse. I hope, therefore, that this natural feeling will plead my excuse for knocking once more at your door for admittance. This would have been done long ago, but I was so thrown “all a-back” on the last occasion, by the fearful anathemas of certain popes of the press, (as our modern newspaper editors may justly be called,) for being “too old fashioned,” that I have hardly yet recovered sufficient courage to show my antiquated phiz again, among your numerous fashionable visitors. Some short time ago, however, I was just beginning, once more, to exorcise a few addenda to my former “Odds and Ends,” when I was startled by the sight of my own name, in your Messenger. Not even imagining that any other person would so fall in love with it as to counterfeit the signature, and being most deplorably forgetful, I began to ask myself, “Is it I? Can I already have done and forgotten what I supposed I was just about to do; or am I dreaming?” The thought suddenly flashed across my mind, that Cogin Hansen, or “the sleeper awakened,” when in a somewhat similar predicament, as recorded in the “Arabian Nights Entertainments,” had severely pinched himself to make sure of his personal identity. I resorted instantly to the same rousing process, and immediately discovered upon beginning to read, that “a fresh hand had taken hold of the bellows.” The perusal of a few lines only, convinced me thoroughly of his blowing it far better than I had ever done, or could do; and I was on the point of publicly surrendering my name in his behalf, and praying for an act of our legislature to sanction the transfer, (as the law requires,) when it occurred to me, that I owed it to myself, before such petition to our beneficent law-makers, at least to attempt some self-vindication against the alarming charge of being “too old fashioned.” This, however, is no easy task, in the entire absence of all those specifications which the law requires in every case of indictment, showing the *how* and

the ~~wherein~~ the alleged offence has been committed, and moreover, in a case where the accused has scarcely a chance of being tried by a jury of his peers. The only plan I can think of to effect my object, if possible, is, by contrasting many old fashions with new ones, in relation to similar things; and if all fails, to throw myself on the mercy of your court. Even then, unless half at least of its members are sexagenarians and past that age, I cannot cherish much hope of acquittal. But the charge against me is still recorded in your Messenger, and not a word have I yet offered in my defence. *Now* then, or never, let me offer it, unless I am barred by your act of limitation.

Before I begin my contrasts of old and new fashions, I must tell you what a quandary I have been in, relative to the proper application of the term *fashion*. After half an hour's hard study in Mr. Crabb's admirable work on English synonyms, to determine when I should use *that term*, or *custom*, or *practice*, or *habit*, I gave the matter up in despair, and resolved, "*meo periculo*," to make *fashion* act as a sort of omnium-gatherum for every meaning of which Mr. Crabb had constituted the four terms, distributees. Against his apportionment I have not a word to say; for I plead incompetence clearly to understand his rules of choice; and I make this confession in hope of propitiating, in some degree, our newspaper-popes, of whom I am in such mortal dread; and whose next anathema, I fear, may be against my style. With this propitiatory offering to their acknowledged supremacy in giving the law on all matters of taste, of science, arts, morals, politics and religion; in short, on all subjects about which printers' ink can be shed, I proceed to my array of old fashions against new ones: and first, on the score of economy, in which a greater minuteness of detail will be necessary, than I would enter into, if I could well avoid it.

In by-gone times, our families generally, could adjust their limbs much to their own comfort and satisfaction, in what were familiarly and figuratively called "*flag-chairs*." These cost from two shillings and sixpence, to three shillings, while those of a more patrician order, and specially intended for *company*, were only a few shillings more costly. But to compensate, in some degree, for this extra expense, they were covered with good substantial leather, quite strong enough for children's shoes, or dancing pumps; when the then fashionable style of "chicken-flutter and cross-shuffle," required quadruple the strength which similar articles now do, under the "lackadaisical system," of practising this exhilarating amusement, which, (by the way,) seems entirely to have changed its nature by becoming most decidedly soporific. In these days, a large portion of us, have become so very delicate and sensitive in our members, that it is indispensable to their repose from the wearisomeness of existence, to deposit them generally, upon rocking chairs with spring bottoms, costing from fifteen to forty dollars each; or on sofas equally elastic, and covered with expensive materials, at thirty, forty, fifty times the price of the old fashioned receptacles for our basement stories, which formerly supported their superstructures quite as well, quoad all the purposes of health and comfort, as their modern successors do, and at one-eighth or tenth of the expense. For the moral of this fact I refer you and your readers

to the maxims of Dr. Franklin's Poor Richard, where they will find it stated as an axiom, that "*other people's eyes cost us more than our own*." And between ourselves, I must think, that this most silly and ridiculous passion for show, which I verily believe has existed ever since the Devil tempted our mother Eve to eat the apple of knowledge, is far more virulent in these days of perfectibility, than in those by-gone days which I am laboring to vindicate against the anathemas of our newspaper popes.

As to our daily meals, either with or without company, the cheap, homely tables *once* used for them, would now go near to destroy all appetite among the fashionables of the present race; whilst the substantial viands which they formerly held, and which every body knows as familiarly as household words, have been banished, in a great measure, especially from our large towns and cities, the established arbiters and dictators of all fashions to the country. The successors of these viands are certain Frenchified kickshaws, the very names and substances of which are culinary mysteries, necessarily requiring some explanation before old-times-people can venture to eat any thing: unless, indeed, when simultaneously pressed by resistless hunger and the fear of betraying their rusticity, they could content themselves to follow the laudable example of an old country-gentleman, once at President Jefferson's table, who, (as report says,) incontinently made his dinner,—"entirely of baked Irish potatoes!" they being the only old acquaintance he could recognise among the sophisticated host of materials most abundantly spread before him. But this mystification of eatables, is not the worst of it, since they must be served up, for consistency sake, on very costly tables, and in sets of fine china, cut-glass, and sometimes silver, the first cost alone of which would purchase a full year's allowance of bacon for the largest Virginia family. Add to all this, and, likewise, for consistency sake, those dishes so numerous, so variegated, so exquisitely foreign in composition, taste, and titles, must, "*ex necessitate rei*," be well washed down with equally exquisite foreign potations, maugre the cost!—provided, always, that *credit enough to buy them*, can once be established. Hence the former comparatively cheap drinks, which were used in "the olden time," at the tables of what were then called, (par excellence) "*the gentry*," have been nearly excluded, to make way for such a motley multitude of French, Spanish, Portuguese, German, and other foreign wines, that I can no more recollect, *even their names and titles* than I could remember and repeat all the names and genealogies recorded in the book of Genesis. Yet the many silly adventurers in the still more silly race after *gentility*, dash through them all, as if they belonged to their mother-tongue, although they make quite as sad havoc among them, as the cost of these foreign wines does among their purses. This latter havoc is, not unfrequently such, in a single day, if the party be given by a planter or farmer, (whose only return probably, will be *ridicule for his folly*,) as to require some months of hard agricultural labor to pay for it. But, if such parties be frequent, the inevitable end of this tragi-comic farce is, that the performers must very soon exchange all the comforts, luxuries, and social intercourse which they enjoyed in the *old States*, for the coarsest fare, incessant drudgery, and the constant risk of dirks or Bowie knives

being thrust into their vitals, in the new States and territories, if they only crook their fingers at any one out of their own family. Here, if theory can be determined by practice, *liberty* means that every man shall do as he pleases to the full extent of his physical powers, to indulge his brutish or any other propensities. That there are hundreds and thousands of men in these parts of our country, who deeply deplore such a state of things, I have not the smallest doubt; for I have several personal friends among them, who have assured me of the fact. But *all* their communications contribute to confirm what I have just said; and that *they*, for the time being, are suffering a sort of moral martyrdom for the sacrifices which they formerly made, in some one or other of the old United States, to obtain the mere soap-suds-bubble of superior fashion and gentility. Most of the competitors in this preposterous,—may I not say, *immoral* race,—have been taught by the morbid public sentiment on this subject, to lavish their money for *that* which all the money in the world cannot purchase. They have been most fatally led to believe, that the greatest spendthrift among them will always gain the prize of gentility, in preference to the men most distinguished for their good morals, manners, and mental endowments—qualities which the wise and the good, whether poor or rich, and from time immemorial, have always determined can alone constitute any just title to the character of a real gentleman. Those who are truly entitled to this highly honorable distinction, may adopt different external modes, (all of which may be good,) at distant periods, of evincing their claims, and therefore I shall not now attempt to compare the present with the former fashions, any farther than to say, that it is much easier *now*, than in the *olden time*, to counterfeit the gentleman, since in these *levelling-downward days*, fit subjects for a penitentiary not unfrequently smuggle themselves into the genteel society, under the specious disguise of a good suit of clothes and fashionable manners. In by-gone days, such an occurrence was hardly possible, for infinitely greater pains were taken to guard against such impostors. To aspire to the character of a true gentleman is certainly both honorable and highly improving in every point of view;

“*Emolliat mores, nec sint esse feros*.”

But to rest our pretensions on the success of the struggle, who shall squander the most money in the vain pursuit, is quite as great a folly, to say nothing of the sin, as we can possibly commit. In *this*, as in numerous other popular fallacies, we may rest perfectly assured, that “*the race is not always to the swift, nor the battle to the strong*.”

Take another contrast. Fifty years ago, indeed still later, a gentleman's summer dress, especially in the country, usually consisted of a home-made straw-hat, worth perhaps twenty-five cents; a single change of coats of some cheap material; a few pair of nankeen breeches (if I may be pardoned for using so vulgar a term in these days of exquisite refinement;) and as many pair of thread or cotton stockings, protected, when he rode on horseback, by what were called “*leggings*,” of check or “brown holland.” The aforesaid breeches, (by the way,) were made, during the revolutionary war, of what is now called “par excel-

lence”—“*the Forsythe cotton*,” then as common as any other kind, under the title of “*nankeen-cotton*,” although usually so mottled, that the arnotto-dye was generally used to produce uniformity of color; after which, a country congregation of males, thus equipped for Sunday exhibition, looked at a little distance for all the world like an assemblage of the tropical birds,—called *Flamingoes*. Happy then, the country beau whose breeches had most of this Flamingo hue; and still happier the house-wife who had succeeded best in compounding the arnotto-dye to adorn the lower extremities of her husband, son, or brother, as the case “mought” be. But this is a digression (to which I am most unfortunately, and I fear incurably, addicted;) let me, therefore, add to the above, two pair of shoes; one for every day, the other for Sundays, with one Sunday coat,—and the summer wardrobe for an old-times' gentleman was complete. His external habiliments for winter, were, a good “beaver hat,” made, not like Peter Pindar's razors “*only to sell*,” but to last until he was tired of it, and long after; a plain, neat, broadcloth coat, rarely if ever costing more than thirty shillings or thirty-six shillings a yard, with the coat of the previous year, for daily use,—except Sunday, when the best was put on as a matter of course. The breeches, or “*inexpressibles*”—as it became the modest fashion to call them, before the beaux, who had no calves to their “spindle-shanks,” succeeded in their final expulsion—seldom exceeded two pair, neither of them very costly; his shoes were the same in number, but more water proof; and with them he associated a single pair of stout boots—worn only upon grand occasions,—such as musters, county courts, and elections. Moreover, these said boots were made of leather so strong and durable that no fair play could wear them out in much less than three or four years: for be it remembered that boots were not *then* as *now*, the wear for every day in the year. To finish the winter wardrobe, and furnish a defence against rain or snow, (for mere cold was little regarded in those days, even by ladies,) one great coat was kept, of some very strong cloth, costing from ten to twenty shillings a yard, and so lasting as to perform most effectual services through several winter campaigns.

But now, what do we find to be deemed all essential in forming a gentleman's wardrobe, for both seasons? Not only an entire change of form—against which I shall say nothing,—but a most striking one in the number, materials, and cost of the articles;—to an amount more than triple what it formerly was, while individual income, especially from agriculture, the paymaster-general, has diminished in nearly an equal ratio.

In by-gone days, we deemed our heads quite hard enough, if protected by a hat with some brim around it, to encounter any degree of summer heat, without the smallest risk to our brains of being either addled, baked or roasted. *Now*, our craniums have become so exceedingly tender, and the consequent hazard of such disaster so imminent, as to render fur caps and band-box hats for winter, with non-descript noddle covers of silk, for summer,—but umbrellas also—articles of vital necessity, and thereby adding two or three hundred per cent to what may well be called our self-imposed *skill tax*, for both seasons. Even the beaux and belles among our darkies have adopted the fashion, and have

learned to flourish *their* umbrellas, (numberillas, as they call them,) quite as stylishly as their masters and mistresses, except when they first put themselves into training; during which time their extreme awkwardness in handling these skull protectors, forms a most ludicrous burlesque of the higher powers. A correspondent change in the summer-covering of our limbs and bodies, has been deemed equally essential to suit their diminished power of enduring summer-heat; so that the old fashioned, cheap pair of coats are now thought far too heavy, hot, and what is much worse, *too ungentle*, to be sustained by those who can hardly survive the dog-days in any thing but the thinnest and lightest of those costly gossamer fabrics, at present used for gentlemen's summer apparel. Our foot tax, also, for both seasons, contributes its full share to widen the difference between old fashioned and new fashioned expenditures: for most of us—especially our youth—must now have at least two pair of thin boots for summer—two of more substance for winter, (although none of them are made to keep out water,) besides slippers, pumps, booties, Jefferson shoes, &c., &c., the total number and cost of which, for one man, would formerly have kept a whole family in boots and shoes for double the period.

When we compare the *old* with the *new* outfit for a winter campaign, the contrast is still more striking, still more illustrative of what I am trying to prove. *Now*, after a modern gentleman has ensconced himself in all imaginable envelopes deemed essential to his comfort and preservation *within doors*, at greatly increased cost, compared with former times, he has, alas! to guard himself with more than double diligence, against what the amiable Sancho Panza used to call, "*the inclemencies of the Heavens*." To do this most effectually in the olden time, every man firmly believed, that a single, substantial great coat was amply sufficient, and his practice accorded with his faith. *Now*, should the thermometer sink only a few degrees below thirty-two, not less than two *over* coats, (for *great coats* they can no longer be called, being much more like gun-cases in tightness,) with a cloak to make assurance doubly sure, must be added, to guard at least against being frost-bitten, if not frozen to death. This triple provision against the horrors of congelation is particularly remarkable in a large portion of those truly unfortunate victims of parental neglect just arriving at that much *envied*, I wish I could say *enviable* age, when so many of them become their own masters, who are utterly unfit to be masters of anything. But far be it from me to blame *them* so much for it. Their *parents* are the great criminals in these cases: for *they* might have given their sons, by a proper *physical education*, constitutions too hardy to require such unmanly indulgences; and by a correct *moral education*, principles and sentiments which would have led them to aspire to far higher, much nobler distinction, than notoriety for dandyism, and effeminacy.

On this vital subject of education for our sons, I have much more to say, than my present purpose will allow me. But if you will pardon a short digression, I will here state as briefly as I can, what it *should not be*, leaving the all important inquiry, what it *should be*, for a few concluding remarks: since I deem it demonstrable, that every thing censurable in the present times

results from false education. Would you guard then against this greatest of all curses, both to individuals and nations, the education of our sons should *not be* either by inculcation or mere sufferance, to spend more of the family property than their parents allow them. It should *not be* to dictate to their fathers or mothers, either in opinions, manners, morals, or domestic duties. It should *not be* to think that very expensive dress and costly living constitute either the man or the gentleman. It should *not be* to become the most frequent, roistering, arrogant, and boisterous attendants at tavern bars, grog shops, and eating houses:—*not to consider* profanity, gambling, hard drinking and lewdness, altogether the most genteel accomplishments they can acquire:—*not to deem* the effort to become of somewhat greater use in the world, than merely "to consume the fruits of the earth," either needless or derogatory to their stations:—*not to run up bills* with their tailors and with tavern keepers, during their minority, which afterwards will require their whole income, for some years, to pay:—*not to deem* it penurious to keep accurate accounts of their receipts and expenditures—a habit (by the way) never to be acquired, unless commenced in early life:—*not to become* critics in the sublime art of cookery, nor first rate judges of every variety of intoxicating liquors:—*not to believe* their young stomachs even so early as their tenth or twelfth year, incapable of performing all their healthful functions without the smoke or juice of that poisonous narcotic, tobacco;—*not to feed* their young brains with snuff, as if *that* were the only food they are capable of receiving. And lastly, it should *not be* to assume to be men, before they have qualified themselves to act as such.

Could modern parents only be prevailed on to exert their whole authority, aided both by wise precepts and virtuous example, to correct the numerous heart-sickening evils in modern education;—to exert it *tho*, but for a few years, without either cold or hot fits in applying it; and the whole generation of idlers, drones, dandies, and profligates, would be swept from the face of the earth, to be replaced by a band of hardy, active, industrious, intelligent and moral young men—the pride of their parent's hearts, and an honor above all price, both to themselves and to their country. Do not, I beseech you, understand me to say, or even to *think*, that we have no such young men, among the present generation. No,—God forbid; for it rejoiceth my old heart—now almost worn out—to feel, with absolute certainty, that our good mother, Virginia, has many such to sustain her waning fortunes. But the misfortune is, that their number is small, when compared with those of opposite character, and consequently it requires far more moral courage than young people—even the most intelligent, virtuous and best educated—usually possess, to resist the ridicule and innumerable artful devices always used to drive or to lure them from the paths of rectitude. The youths who, in these times, can successfully resist such baneful, deadly enemies, deserve all the praise, all the honors, all the rewards that a grateful and generous country can confer.

In pursuing my contrasts between past and present times, relative to expense, I was about to say something of *ladies' dresses*; but on further reflection, I deem them quite too mysterious matters for us old men to talk about, with no better information than our modern

exquisites and men-milliners can give us. I will therefore be admonished on this delicate and recondite subject by the good old proverb, "least said is soonest mended." There are, however, some differences between their former and present educations—both physical and moral, which require animadversion. To them, therefore, I will request your attention for a few minutes.

In old times a degree of skill in *housewifery* was esteemed an important, although by no means the most essential acquirement for most ladies; since the greater part of their lives would probably be devoted to such domestic duties as wives and mothers should always be well qualified to fulfil—at least such wives and mothers as were taught to believe themselves under a sacred obligation to become real *helpmates* to their husbands—devoted, faithful, affectionate, ever watchful *guardians* of their children. In those by-gone days, it had never entered into the minds even of the most imaginative, the hop-step-and-jump racers after human perfectibility—of which we had none before philosopher Godwin's day—that the entire emancipation of mankind from all moral and religious restraints was to be attempted, much less achieved, by *reformers in petticoats*—nor that *females* utterly regardless of all the general sentiments of mankind, relative to their appropriate occupations and duties, should become itinerant public lecturers—or teachers of *any thing*. The universal opinion, in the olden time, was, that woman's most sacred duty, her greatest praise and highest honor, consisted in the zealous, untiring, faithful and judicious discharge of all those arduous, but delightful duties, (where they succeed,) which naturally devolve upon the *mistresses of families*. May God, in the plenitude of his mercy, forever bless them all, both in this world and the next; for painful indeed, *most painful* is often their lot; complicated, laborious, and frequently revolting, their necessary occupations; distressing in the highest degree, the scenes wherein they are the chief, the only actors; whilst they, most generous, most noble souls! ask no other reward in this world, than the love and devoted affection of husbands and children—the sincere friendship and lasting attachment of other relatives and friends; yet too seldom, alas! do they meet this reward, highly as they deserve it, and easy as it is to bestow. Pardon me, Mr. Editor, should you think I dwell more on this subject than is due to its intrinsic merits; but my mind and my heart are full of it, and I plead, in justification, the old adage, that "out of the heart the mouth speaketh." Our *matrons*, our *mistresses of families*, not only give a tone to society, but contribute (unobtrusively as they work,) more than all other causes put together, to form the national taste, opinions, principles and morals; how vitally essential then is it that all possible attention should be paid to *their* education. Our children derive from them their *first lessons* in *every thing*. Should they be incapable of giving them to good purpose, all their pupils will probably become instruments of evil rather than of good, and curses instead of blessings to society. Yet, for every dollar now spent towards qualifying our daughters to discharge those all important duties for which nature's God designed them—duties which men are physically as well as morally, incapable of performing—hundreds and thousands of dollars are worse than thrown away

in attempts, often utterly abortive, to teach them certain things called "*accomplishments*," for which a very large portion of these truly pitiable victims of parental folly and vanity, have neither taste nor talents; accomplishments, too, of which they make not the least use, after once gaining the liberty to neglect them. Nay, why should they *not* neglect them, since a mere smattering is the sum total of all their most costly, laborious, and reluctant acquisitions?—acquisitions moreover, which, if made at all, require almost constant gadding about from home to display them!

The parents of former days were not entirely guiltless of this preposterous shameful waste and misapplication of time and money, in educating their daughters. Although housewifery, a term nearly obsolete in these perfectibility-days, always then held a conspicuous rank among the things to be taught; yet *spinnetts* and *harpsichords*, (the fashionable instruments of those times,) were often made household gods, where no true worshippers could be either found or made, even by the most laborious and costly efforts. These instruments, however, were rare, comparatively speaking; and when kept at all, were looked upon as a kind of heirlooms to last for some generations. There is now one of these remembrances of by-gone times in a branch of my own family, but an alien bought for others' use, which seems destined—after indoctrinating three or four generations of "no plus ultra" strummers in the musical art—to sound its last expiring notes in my own county. "Requiescat in pace," is my most earnest wish for it; but if it could speak, while remembering all it has suffered in being forced to attempt impossibilities, I have not a shadow of doubt it would exclaim, "let me return to my original dust, for I have had no peace, no pleasure on earth, during nine-tenths of my existence." *Look at the present fashion in this matter of music-mania*, if you can do it with impartial eyes, and what will you see? Not only must *all* be forced to learn, "*no less volens*," and often to the entire exclusion of every really useful branch of knowledge, whatever interdict nature or circumstances may have interposed; but both nature and art must be tortured to perform what *the one* has forbid, and *the other* is incapable of achieving. *Now*, at least one piano, (pyrannees, as some of the illiterate aspirants call them,) must be kept in almost every house, whatever the condition and circumstances of the owners may be, as a standing and necessary article of furniture, for visitors, as well as the females of the family to strum upon; but another more costly, must be given as an essential part of the wedding paraphernalia, to every daughter who has gained a husband (God help him!) by her *fingers*. It once happened to me, that in passing along the main street of a town, I counted in less than a quarter of a mile, some eight or ten of these instruments on which the diligent performers were murdering certain marches and waltzes, although nearly as easy to execute as the once popular old tune of "Poor Betty Martin, tip toe toe," with as much uniformity, as if it had been a matter of previous agreement. I cannot affirm that there was in either case the "malice prepense" required by law to constitute the crime of murder in the first degree; but if there had been, the heinous act could not have been more effectually perpetrated.

Permit me to exhibit another still more striking con-

trast, in regard to expense, between past and present times. Formerly our wives and daughters usually rode on horseback, and greatly to the improvement and preservation of their constitutions and general health. Now, in these boastful days of human perfectibility, when we hear and read so much silly verbiage about "*the march of mind*," and witness so few proofs of its being really progressive, the horseback mode of conveyance is no longer endurable for women or girls, and scarcely for men or boys,—especially to take a journey. Of late years, *all*, at least among the real and quasi gentry, have grown so exceedingly delicate and refined; so lackadaisical and dyspeptic; (a term formerly unintelligible except by the doctors,) so disqualified for labor either of body or mind; so fearful of melting or freezing from heat or cold, that to transport our ladies only a few miles, the costly barouche or tandem must be substituted for the cheap ponies and side-saddles; while the gentlemen, both old and young, with very few exceptions, cannot trust *their* locomotion to any thing less expensive than sulkies, gigs and buggies; the etymology of all which terms, by the way, is quite as untraceable as that of any terms in the Goolah negro dialect. But this is far from being the most effective cause in augmenting the extravagance of the present times, beyond any thing known or practised during the period which is now so derisively called "*old fashion*." Once a year regularly, nearly our whole white population are seized with a new disease, for which the doctors hitherto have found neither name nor cure in the whole materia medica. Its first symptoms always appear early in June, but the malady never assumes its most aggravated form, until about the full moon in August. That it is caused by the increased effeminacy, luxury, and dissipation of our people, seems perfectly certain; for our climate is not worse than it was sixty or seventy years ago; yet our physicians both diplomatized and self-created, have multiplied at least twenty or thirty fold. With permission of these learned gentlemen, I will call this wide-sweeping, devastating epidemic, the *hydromania*, or water-drinking lunacy; for it sets all who are afflicted with it to scampering in every direction, after mineral springs, where, without any knowledge, even approaching to certainty of their specific qualities, they guzzle the water day and night—as if for a wager—whose stomach could hold the most, and in full faith that each spring has perfect power to cure every disease under heaven. "*To raise the wind*" for these very expensive excursions, formerly so seldom taken in our state as scarcely to be known, it is not now uncommon, especially for our farmers and planters, to obtain large loans from banks, in anticipation of their crops, the proceeds of which, when thus neglected for one-fourth of the busiest time of the year, rarely fail to come far short of the money borrowed. And no wonder, since their farms are left during the whole of this water-guzzling campaign, to the tender mercy of men whose pecuniary interest it is to exhaust them for their own benefit, at the expense of their absentee proprietors. Similar anticipations of income, for similar purposes, are now common among all other trades, professions, and callings, and with like results. Multitudes of far less innocent persons than imagined invalids, congregate at these mineral springs, to the great demoralization of society in general, and

the certain ruin of many innocent families. At the head of these must be ranked the entire tribe of gamblers, now, in these much vaunted times, formed into a regular systematic profession, and by far the most showy, dashing, and prodigal amongst us. Like so many vultures or prowling wolves, they are ever on the watch for their prey, and rarely indeed are they disappointed! For, the keepers of all our watering places, with few if any exceptions, rent to them rooms, at enormous prices, for the special purpose of carrying on their nefarious business; and no President of the United States has ever had more crowded levees, than the master spirits of these haunts ("*hells*," as they are very properly called,) of criminal cunning and fraud; plundering, under a pretence of fair play, the unsuspecting, the ignorant, the guilty victims of the gambling passion.

At all our mineral springs, but particularly at those most celebrated as places of "*fashionable resort*," there may always be found hundreds of persons led thither by the mere love of show; of its inseparable companion—gadding about; and of almost every imaginable means of killing their great and inexorable enemy, time! Here you may often see, in heart-sickening crowds, fathers and sons, either gaming, drinking, or wasting their hours together in utter idleness,—which they call *healthful recreation*: young ladies—the future mothers and first teachers of the next generation—diligently preparing themselves for this most momentous, most sacred duty, by husband-hunting among the exquisites of our sex,—very many of whom would probably not sell for ten dollars a dozen, if brought into a fair market: while the doting mothers of these pitiable victims of false education, find full employment in looking on with fond anticipation of the great matrimonial speculations which their fingers and toes are to achieve for them; since far more care and expense is now lavished upon *their* instruction, than on any indoctrination of the head and the heart that man or woman either can possibly bestow.

Let me entreat you, Mr. Editor, not to suppose for one moment, that any of my remarks are designed for those who are really afflicted with such bodily diseases, as good physicians have pronounced curable by the use of mineral waters; or, for the numerous and highly estimable persons, in good health, who may be found occasionally, at all of them; and who visit them from motives which none would condemn. They are aimed at those alone who labor under the maladies—incurable either by medicine or medicinal waters—of idleness, indolence, licentiousness, prodigality, and, *vanity*, the greatest spendthrift of them all! And I am perfectly willing to submit it to impartial judges, if any such can be found, to decide whether the *old* or the new fashioned times have produced the greatest number of these nuisances to society. One great cause of their rapid increase of late years, did not formerly exist: it is the wonderfully increased *facilities of travel*. These, notwithstanding their vast and innumerable advantages to mankind, certainly hold out to the vicious, so many more temptations to the indulgence of all their worst passions, that it is no wonder they should multiply enormously. Variety, despatch, secrecy, and quick escape from punishment, are constantly luring them on; while no moral nor religious restraint holds them

back. Even on the virtuous portion of our race, these facilities of travel, truly valuable as they are, have had a baneful influence, by impairing most manifestly, that fondness for domestic life, that love of "*home, sweet home*," without which, especially in females, neither family prosperity nor family happiness can possibly exist, in any degree comparable to that which characterised, in the olden time, a very large portion of what was then called the best society. The temptations to leave our homes having multiplied a thousand fold, it follows, naturally, that the numbers who yield to them will augment in a corresponding ratio.

In the foregoing contrasts between old fashioned and new fashioned people, I have confined my remarks chiefly to matters of expense. Let us now see, more particularly, how they will compare in regard to moral and physical education. In the olden time, almost every parent, whether religious or not, taught their children to say their prayers, at least *once* in every twenty-four hours; a practice, which however inefficient of itself, gave them, if nothing more, some idea of a future state of rewards and punishments; some notion of their accountability to a supreme being; which, if modern children in general acquire at all, it must be by their own seeking, rather than by parental inculcation. Formerly, they were always taught implicit obedience in all matters which they were too young to understand. Now, they must be reasoned into it, even while yet in their nurse's arms; often too, by mothers whose own reason has never been trained for any such duty, as that of early education. Formerly they were taught, both by precept and example, to love home; to aid their parents in such little domestic labors as they were capable of performing; to avoid public houses as they would the devil; to abstain from drinking ardent spirits, as a practice that would be followed by condign punishment; to treat old age with the utmost deference and respect; and to consider the whole period of their minority not a proper time for playing the parts of men, but to make all suitable preparations for it. *Now*, they must be breeched nearly as soon as they can walk; must be dressed like men by the time they get into their "teens;" and, long before they get beards, mustachios and whiskers, must be suffered, for fear of cramping their geniuses, to strut about taverns in all the fancied dignity of manhood, inuring and case-hardening their yet unvitiated stomachs to alcohol, in all its innumerable combinations; and, to cap the climax, of precocious health—destructive indulgencies, finishing off their manly education by becoming, *per saltum*, perfect judges in regard to the true gusto and fumet of segars and chewing tobacco!—articles, by the way, in the use of which a youth of the olden time would have been quite as much ashamed of being caught, as with a stolen sheep on his back. Moreover, our children of the present day must often be taken from school to be introduced into general society,—lest the girls should be too awkward to substitute the mistress of the family, should accident take her out of the way, and the boys become quite too bashful for the practice of medicine, law, or politics, which they are all destined to commence as soon as possible, in spite, often, of nature's most manifest interdiction,—for, the legalised creators of such professional

characters have only to pronounce the omnipotent fiat, "let A, B, and C, be a doctor,—an attorney at law, or a politician and statesman," according as he may petition to be; and each aspirant, in the twinkling of an eye, becomes, "*au fait*," up to every thing in his selected line, although he may be scarcely able to read or write his own language, or have common sense enough to acquire skill, even in the least intellectual of all the various trades, professions and callings essential to the well-being of society. Should any doubt this, at the first glance, let them ask themselves to what proportion of young men with medical diplomas in their pockets, they would be willing to trust their lives? To how many out of ten young attorneys at law, they would confide a cause involving as much money over the fifteen shilling fee, as would pay for dinner and horse-feed, at a county court? Or lastly, and above all, (in every case, however, premising that the self-questioners shall be in their sober senses,) let them ask themselves to what proportion of legislators and rulers in our state and federal governments, created, "*spéciali gratia*" by "the sovereign people," they would feel safe in trusting their lives, liberty and property? Let them farther ask themselves, in regard to many of these hap-hazard deputies of the said sovereigns, if there could be any other rational answer given to the question, "*for what purpose were they made?*" than, "*merely to fill up the assortment of human beings.*" Was this the case in old fashioned times, or was it not? I answer in the negative, although I am perfectly willing to submit the question to the arbitrament of better judges than myself,—provided, that half the number be *old* and half *new* fashioned people, pledging their honor to try the cause according to the evidence. But, to proceed with my contrasts between moral and religious education, in past and present times. Formerly, parents in general deemed it an essential part of their duty, at least to attempt, (however feebly and imperfectly,) the imbuing the minds of their offspring, with the great leading principles of morality, and with some idea of religion. *Now*, it seems, at least to the *new* fashioned people, that all these perplexing, anti-sensual matters, can be far better taught (if at all), in our public *academies*—as schools of every grade are now called—for, in every one of these, the formal pledge is constantly given, that, *every possible attention shall always be paid to the morals of the pupils*; and this seems to be considered by a very large portion of the patrons and patronesses of these bettering hospitals, as a complete exoneraton from all farther domestic attention to their children, than merely to feed and clothe their bodies; their intellects from seven or eight years of age, being left entirely to those who make a public profession of directing and guiding what, in modern times, has been called,—(God save the mark,) "*the march of mind*." Not that I mean to disparage, in the slightest degree, either the true *march*, or any of the well qualified conductors of it—for they form a highly useful, most meritorious, ill-requested class—but merely to maintain, that far too much is left for them to do, which it is the sacred duty of parents themselves to perform. Sacred! aye, most sacred! but whether better performed now, than formerly, may perhaps be inferred, with some approximation to truth, by contrasting certain wicked practices, springing from the same evil passions, as

they have manifested themselves, during the two periods I have undertaken to compare.

In by-gone times the prevalent fashion for working off the spirit of "*combaticiveness*," (as certain modern philosophers call it,) was, to take a bout or two at "*fisticuffs*;" an exercise which cost nothing for the outfit, and rarely resulted in any greater damage to the belligerents, than the temporary obfuscation of an eye, seldom used for beneficent purposes; the change of locality in a tooth, or an unsightly derangement of the facial angles. But in these modern days of vaunted amelioration and refinement, the most fashionable and approved style of evaporating this combative spirit, is, by *pistolng* or *stabbing*, according to the fancy of the operator, (both being equally genteel,) but both must be performed with very nice and costly implements; and such are the skill and dexterity of the adepts in these modern accomplishments, that the death of one or both of the parties is almost sure to finish the sport. Our newspapers—(those most voracious transmitters of news,)—report, that one of the Bowie knife adepts lately gave the quietus to two men within the inconceivably short period of four or five minutes,—a surgical operation, by the way, as far surpassing all praise, as it exceeds any idea that an old man like myself can possibly form of the skill of these death-giving gentry, without ocular demonstration, which God, in his mercy forbid. So fond indeed, have the moderns grown of these fashionable amusements, utterly unknown in my younger days, that it is not now uncommon, in some portions of our country, for men to ride a hundred or more miles, solely for the pleasure of shooting or dirking others in their own houses, or abroad, as may be most convenient; and if the victims happen to have wives and children reduced to beggary by this most fashionable mode of committing murder, so much the better; it greatly enhances the enjoyment of the operators. A most notable instance of the increasing popularity of this fashion, which has all the advantage of *public over private* assassination, lately occurred in a legislative hall, during the hours of business, where, even the speaker of the body deliberately left his seat to murder one of the members, for the heinous offence, the outrage inexpiable but by the death of the offender, for *words spoken*! things which, in former times, were met either by other words of similar character, or by fisticuff argument. It is true he was arrested, and tried, but it is equally true, and still more astonishing than true, that the verdict in the case was *justifiable homicide*. Which fashion is best, the old or the new, let others decide. Very promising symptoms of the prevalence of the modern fashion, are beginning to appear elsewhere in the highest class of society, (if *public men* can justly be so ranked,) but I forbear to comment upon this most foul, national disgrace; for all my principles, all my feelings, utterly revolt at it. Yet, I must take the liberty to remark, that unless it can be put down by the strong arm of the law, a domicile among the most savage and barbarous people upon earth could hardly be worse than one in those parts of our country wherein the practice is most countenanced. But lest this murderous spirit should not become, by its own workings, sufficiently common to keep pace with the grand intellectual progress of the present generation, we are beginning to import from our mother country, animals

in human shape, that certainly belong to our race, who are fashionably styled "*professors of the pugilistic art*," and who are greatly encouraged in training some of our own congenial native breeds for this noble purpose. These adepts moreover, have so marvellously improved upon the old fashioned manipulations in personal conflicts with the naked fist, that the master-artist can not only very soon render (according to their own slang,) each others "*magards perfectly unintelligible*," but can actually inflict death by the unarmed hand. Another improvement, as the moderns must deem it, is, that this practice of crippling and killing "*secundum artem*," is usually performed for money, not from anger. On the contrary, the performance is always prefaced by as polite bows and apparently cordial shaking of hands, as if the parties were old friends met for some convivial purpose. Whether the modern fashions in these matters are better than the old, let your readers decide.

Take another contrast. In by-gone times, when a married pair discovered that they had made a mistake in choosing each other "*for better for worse*," and that the latter part only of the alternative was verified, they usually passed through all the vicissitudes of war and occasional suspension of hostilities, during life, rather than break the solemn compact to cleave together "*until death did them part*." Now, instead of waiting for this universal peace-maker, they have grown so Fanny-Wrightish as often to part before the year is out, either voluntarily, or by the running away of one of the parties, or, by the more formal process of divorce. This latter mode enables them to make another matrimonial experiment, (for marriage has not yet gone entirely out of fashion,) and exempts them from the penalty inflicted by the law, for bigamy. And such is the wonderful liberality of our modern legislators, quoad *divorces*, compared with our old fashioned law-makers, that the number of these legalised separations have increased probably fifty fold. Which of these fashions is best, let our popes of the press decide.

There is another contrast which I would fain offer, but must do it, in much fear and trembling, for it relates to these said popes themselves. For a long period, in the younger days of our commonwealth, the entire van, centre and rear of our whole editorial corps in Virginia, consisted of two individuals, called Dixon and Purdy or—Purdie, I forget which. Theirs was the only newspaper in the State; and so very chary were these editors of their own remarks upon any subject whatever, that nothing was so rare in their paper, as an editorial article. We have now no means of judging whether this forbearance proceeded from ignorance, laziness, or modesty; a term by the way, nearly obsolete as applicable to men, and not in the best odor even among our fashionables of the other sex. But such was the state of the press and the conduct of its managers in the olden time; and no more remarkable contrast can be found in the world, between past and present times, than that which is exhibited by the followers of these men: for whether old or young, learned or unlearned, wise or foolish, virtuous or vicious, they act (with very few exceptions comparatively speaking,) as if they verily believed, that the mere ownership and publication of a newspaper qualified them instantaneously and conferred the absolute right to

indoctrinate the public on all imaginable subjects, whether of art, science, or general literature. Nay, more, that should any person dare publicly to question their high behests, however modestly it may be done, they are bound in duty to their own dignity, to treat such offenders with unmeasurable severity. Formerly too, what was called "*the liberty of the press*," was never imagined, even by its wildest asserters, to be nearly synonymous, as it now is, with the liberty of tearing to pieces private character, for no better cause, than political hostility; or indeed, for any cause other than notorious, well ascertained criminality. *Now*, this tearing and rending has not only become the constant business of hundreds of our newspaper popes, but he who sets up a paper, and will neither take a hand at the game himself, nor suffer others to do it therein, is very soon compelled to shut up shop, or to apply all his powers to eclipse every other competitor in the lacerating process. Here, again, I call for a fair trial and judgment between the *old* and the *new* fashion.

My last contrast shall be a few remarks, which, I find, that I have omitted, in regard to the physical training of children in the two periods. Formerly it was universally believed, that the best way to procure for our children *sound minds*, was first to give them, if possible, *sound bodies*. Hence the constant, instinctive desire manifested by them for locomotion, was freely indulged, at all times, by suffering them generally to choose and to take their own gambols in the open air, at every season, and frequently every day. Many times have I seen the little urchins playing barefoot, even in the snow. These gambols they called, and felt to be, sport; for they were all *voluntary*. In these times they must even *play*, if allowed to do it at all, *by rule and measure*; for instead of being allowed to harden and invigorate their bodies by the promptings of nature, they, especially the poor girls, are scooped up like chickens under the fattening process, until their constitutions in thousands of instances are irretrievably ruined; or, in cases wherein the destruction has not been quite completed, they are sent to be patched up by the compulsory gymnastics, callisthenics, and various other "nicks" and "sticks" of modern invention—the bare names of which I have neither Latin nor Greek enough to remember, and still less to understand.

Fearing that your patience is, by this time quite exhausted, I hasten to apprise you that my "odds and ends" are all run out, except the few brief remarks with which I promised to conclude relative to what education *should be*. If then, an old man who has had much to do with the education of both sexes, may be permitted to offer an opinion, without too great hazard of incurring another newspaper anathema for being too old fashioned, I will say that education *should be*, first and above all, to teach, not only by words, but by the most exemplary practice, one ounce of which is worth a ton of mere precept, both in parents and other instructors, that the truths of christianity are quite as demonstrable as mathematical truth; that it is a duty most sacred, most indispensable, not only to prize the knowledge of it, very far above all other knowledge, but to love it, or rather its divine author, with all our heart, and mind and soul and strength. Secondly, it *should be*, thoroughly to convince the young aspirants, that what

are called the duties to ourselves and to society, all emanate from, and are imperatively enjoined by this same christianity, under a penalty too, of everlasting misery in the world to come, for an habitual violation of them. And lastly, education *should be*, to impress on the youthful heart and mind, in characters as distinct and durable as if cut in brass or marble, that duty to ourselves, consists in bringing to their highest state of attainable perfection, all our powers both of mind and body; that the great object of our ever beneficent maker in bestowing them, was, to enable us to insure our own happiness in both worlds, by rendering these powers as conducive as we possibly could, to the eternal as well as temporal happiness of the whole human race; and that man's highest honor *here*, as well as his sole chance of felicity *hereafter*, are utterly unattainable by any other conceivable means. Let such be the basis, the sure foundation of youthful education, and the teaching of every useful art, science, language, and desirable accomplishment, will then become a work of comparative ease—nay, of indescribable pleasure and enjoyment—which, that it may soon be, is the daily wish, the nightly dream, the constant prayer of your old fashioned friend

OLIVER OLDSCHOOL.

Essex, June 11th, 1838.

LETTER FROM MALTA.

(To the Editor of the Southern Literary Messenger.)

Departure from Valetta; Citta Vecchia; Beggars; Catacombs; St. Paul's Cave; Statue of St. Paul; Hand of St. John; Anecdote of Bonaparte; Turkish history; Bajazet; Zennes; the Grand Master D'Aubusson.

At an early hour on the morning after our arrival at Valetta, we had a cicerone at our doors, to accompany us to Citta Vecchia. These idle fellows will at all hours be found in these southern countries, in the immediate vicinities of the best hotels, to offer their services to strangers, and to gain a couple of shillings by their attendance. The wind was at the west, which in this climate is saying that the weather was mild and beautiful. Getting into our one-horse carriage, which from its fashion, we thought might, like a "landed property," have descended from father to son, for the last two hundred years, we were driven at a rate of five miles the hour, to the foot of the hill, on the summit of which the ancient city was built. The driver never for a moment was seated, but was at all times visible, running alongside of our horse, with his right hand on the shaft and a small cord in his left, with which he guided the animal, until we had arrived at the end of our jaunt, which had been, according to our watches, of an hour and a half's duration.

The moment a stranger is observed from the neighboring heights to be approaching the catacombs, it would appear from the number of miserable objects who congregate around the entrance, as if all the inmates of the hospitals, and alms houses, both within and without the walls, had been let loose to annoy him. We here noticed among the crowd those who were lame, blind, and dumb; while a little apart from the others, and in a more conspicuous situation were seated two

wretched beings, who, more than any of their fellows, served to excite our commiseration, and claim that pity, which we had carried solely for the objects of charity. The one was a boy afflicted with leprosy, and the other a maniac, who required the utmost attention of his keepers to prevent his escape, and who was retained by them, as we were informed, as a sort of show—they, doubtless, appropriating the alms, which were intended by the donors for him whom they had in custody, for their own private benefit and support. With shame be it told, that this nuisance was permitted by the authorities; nothing being allowed to those who have charge of the insane, for their attention and expense, save only what they could procure by exciting the pity and consequently trusting to the generosity of those who might chance to visit the place. After passing through several clean and narrow lanes, we were stopped by our guide opposite to a small door, through which, when opened, we descended some nine or ten steps; the walls on either side being damp, and covered with ivy, when we landed on a platform, on which, standing for a time, to enable a person to light our torches, we had exposed to our view a low entry, at the end of which the excavations were commenced. The wind, which was blowing freshly, the moment we entered was unheard; the light from the sun could only be seen at different distances, through the small apertures which had evidently been cut through the stone to serve as chimnies, having been made directly over those places which had been used for the baking of bread and the cooking of food.

The silence in these cells remains uninterrupted throughout the year, save only when broken by the voices of those who wander through the different aisles and cells to witness the singularities of the place. As we continued our way, the utmost care was required, being one moment where the passage was five feet high, and the next where we were obliged almost to creep on our hands and knees, to avoid bringing our heads in contact with the craggy ceiling above. The priest who has served for years as a guide in these catacombs, was very anxious to explain for what purposes he supposed, during the time of the Saracens, the different cells were used. One place, and that immediately on our entrance, appeared to have been adapted for those who had been engaged in the active duties of life. Here was the oil press, the ovens, and the seats of the workmen; while a little farther onward, was the church, the pillars of which, to the present day, are in a good state of preservation. The altar, at the northern part, is somewhat defaced; having been broken at different times, as we thought, either to gratify the wish of some distant friend, or to be placed in the cabinet of some curious traveller. The whole front was covered with the pencillings of those who have visited and scribbled upon it. In a place far distant from the writings of others, we observed the name of "Byron"—whether this was placed there by the noble lord himself, or was the idle act of another, which we were the more inclined to believe, we had not the means of knowing—certain, however, it is, that the name of this British peer and distinguished poet, has been in that place for years, and will probably remain undisturbed for a long period yet to come, serving as it does a double purpose—to interest the stranger and reward the guide. On a friend's expres-

ing a wish to place his name on this curious tablet, I could not but be amused to see how readily our clerical companion scraped a clean place, most clearly solving the question which had been but the moment before asked, why all the names and visits were of so modern a date. Surely, therefore, no one can expect to be immortalized by penning a line, the subject of which, doubtless, would be his own name, with the day and year of his visit, and placing the same on what was in by-gone ages the altar of the Saracens, in the catacombs of Citta Vecchia. It is an idle and useless practice, and one in which no foreigner, save the English and Americans, are ever found to indulge. We observed that the stone was so soft, that with our penknives we could easily penetrate it the whole length of the blade, and so porous that the water was continually dropping upon us, caused by the heavy rains of the few previous days. In different places and at different distances small tunnels were to be seen, which had evidently been used in former times to carry the water without the cells of this once extended and populous subterranean city.

Our guide was particular in pointing out one pathway, which had, by order of the English governor been recently blocked up. Report says, that some years since a Sicilian schoolmaster entered, with his scholars, this narrow passage. Every precaution was taken at the time, for their safe return; each one of the party having been furnished with a rope, a torch, and a lantern. No one, however, of those who went in at that time, ever returned; and it remains to this day unexplained in what manner this party, to a person, perished. Within the recollection of the present inhabitants, a Maltese family was lost in these intricate windings, and for some days after their disappearance, persons were accustomed to enter with torches and drums, hoping by the light to discover their remains, or by the sound to hear their moans in return; but all to no purpose—their fate is veiled in mystery. There is no doubt that many have lost their lives in these places, who have incautiously ventured too far; and it was very right that a necessary precaution should have been taken, to prevent the too curious traveller from entering those parts from which he would have found it difficult to have extricated himself, even with the assistance of a lantern or a guide. There is a tradition which I have heard from good authority, that a drove of pigs was once driven into these passages as far as the driver dared to venture; that after the lapse of several days, and very much to the surprise of the good inhabitants of Burgo, these same animals came grunting from a small hole at the edge of the water, and at a distance of a couple of leagues from where they were so cruelly immured. It is said, and I think with some truth, that these catacombs extend for miles, and indeed in making some excavations, a short time since at Pieta, an avenue was discovered which it was thought might have had some connection with these subterranean passages from Medina, or the ancient city. The farther onward we went, the more narrow and intricate the several windings appeared, while the confined state of the air, rendered the more oppressive and unhealthy from the prevalence of a sirocco, the wind having changed, caused, with some of our companions, a nauseous and fainting sensation, which obliged us to return hastily to the door from which we had entered. Retracing our steps by a

different path, we saw the long, low ranges of tombs, some of which were for single persons, some for groups of children, while others served for families. Some of these inclosures remain to this day unopened, and from not having been exposed to the weather, the appearance of them was, as if the persons who had slept there for ages, had been entombed but yesterday. Several writers have remarked, but more particularly Boisgelin, whose words I quote: "That the stone from which those catacombs are dug, is of so soft a nature that vegetables and shrubs grow in them; the roots of many of the latter, in the upper surface, have pierced through the rock without splitting it; these appear to grow naturally, even to the height of twelve or fourteen feet, and are two, three, and sometimes more, lines in diameter. It is remarkable that the roots of the shrubs thus growing in the heart of the rock, should be as large as if exposed to the open air; for it is natural to suppose that so confined a situation would impede their growth."

Indeed it would be most remarkable were it true, as is above stated, that shrubs would take root on these catacombs, and shoot up a height of twelve or fifteen feet. Never as yet have I been able to discover, in the vicinity of these excavations, a shrub which would live at all—and certainly in a place where there is not a sufficient soil for a weed to exist, you will not be very apt to find a countryman collecting his crops of potatoes, peas, or corn, in their season. Often have I visited the spot above mentioned, both alone and with friends, and cannot at this day find any thing of the kind; neither do the inhabitants, who are well acquainted with Boisgelin, recollect the circumstance, and who, when informed of this assertion, say, that on this subject, if no other, the ideas of the worthy knight were vague and erroneous. It is true that trees will jut out where there is a soil between two rocks, and as the roots increase, they will imbed themselves in the stone. This is found to occur in all parts of Malta; the rock being of the same softness throughout. The Maltese are inclined to believe any thing which might occur in the vicinity of the residence of St. Paul, but this statement carries with it too much of the marvellous, and is pronounced by them, without hesitation, as being most singularly incorrect; or, indeed, that it is an assertion for which there never has or never can be the least foundation.

At the moment of our leaving the catacombs, we were fortunate in meeting the Canonico Grech, who had for fifty years been performing divine service in the small but ancient chapel which covers the entrance of the grotto of St. Paul. It chanced to be on the afternoon of the grand festa of the saint after whom the cave was named, and of all seasons of the year the best adapted for a stranger's visit. This small place was beautifully decorated; the whole walls being lined with tapestry of the richest and most splendid description. The numerous priests were seated around the altar, each one being clad in his best garments, and decorated with a gold chain, on which was suspended a crucifix, with the image of our Saviour engraven upon it. To enter the grotto of St. Paul, we descended some twenty stone steps, proceeded a few yards to the right, and entered a cave, which might contain some forty persons, in the centre of which stands a statue of the apostle, in white marble, and as large as life, with one hand extended,

the fingers of which had been recently broken off by some inebriated young officer of Her Majesty's navy.

This circumstance was much to be regretted by the Maltese, who, from various associations and traditions, almost venerated the image, and by all others for its antiquity, and as a good specimen of ancient sculpture.

It is a curious fact, that the priests have persuaded the inhabitants of Citta Vecchia to believe, that let the quantity of stone be as large as it may, which the numerous yearly visitors may carry with them from this place, yet that the grotto will never be enlarged—that the stone increases as fast as it may be removed. The dust of this place is thought to be very efficacious in all febrile complaints; and at various times crowds of people have been seen to congregate around the entrance, to ask permission to gather a little, as the last and surest remedy for a sick relative who may be lying ill in a distant casal. This request is never refused; and, frequently in a stormy night, a priest has entered with the applicant, thinking that should he refuse, and the ill man die before the morning, his death would be on his hands. Much indeed there is in faith, and it often happens that when the sick recover, it is considered a miracle; and when not, it is said to have been God's will it should prove otherwise. Therefore, let the result be as it may, it cannot be other than right—a most sure and pleasing way of reasoning to the ignorant and bigotted applicant. This small place is one of the most interesting spots on the island, from the fact of its having been used by the primitive Christians as a chapel in which to worship, and also from its having afforded to St. Paul a temporary shelter, when persecuted for preaching the cause of Christ. This cave is also noted for having been, about the year fifteen hundred, the residence of a celebrated Sicilian hermit, who, from his austere method of living, and oratorical powers, drew around him crowds of people from all parts of Malta, and even from the neighboring islands of Sicily and Gozo. It has also served, in times past, for the refuge of criminals, who, when they had committed murder, and fled for safety to this grotto, could never be removed for trial and punishment. It was only necessary to fast such a number of days, and oftentimes to ask forgiveness on their bended knees, at the statue, to be acquitted of any crime, in its nature however revolting, in its termination however diabolical. With shame be it told, and with disgrace be it recorded, that during the whole period of the administration of the knights, and indeed until very recently, this was the only place which would afford such villains protection against the laws which they had violated, and the murders they had committed. The reverend Howard, on his visit to the principal hall of the hospital (de St. Jean de Jerusalem) at Malta, in April, 1786, wrote as follows: "The number of patients was from five hundred and ten to five hundred and thirty-two. These were served by the most ragged, dirty and unfeeling persons, I ever saw. I once found eight or nine of them highly interested with a delirious dying patient. The governor told me that they had only twenty-two servants, and that many of them were debtors and felons, who had fled thither for refuge. Even a murderer cannot be taken if found in this hall. Every church in Malta, where the sacrament is administered, is a sanctuary for debtors and felons; in that of the Dominicans, and

also of the Augustines, there were one or two persons." What protection was there for a man's life, if an assassin had only to remain on the steps of a church to commit a fiend-like deed? What consolation was it to an aged father, when following the remains of his murdered son, to know that the murderer lived? Or what temptation could there be to pray in a church, the altar of which was stained by the blood from an assassin's hand? Very recently, during the time of Sir Thomas Maitland, a man who had committed murder in a distant casal, fled to the altar for protection; he was, however, by the command of the spirited governor, quickly removed, carried to prison, after a few days tried, found guilty, condemned, and executed. This is the last instance which has ever occurred, or which it is to be hoped ever will occur, where a criminal will be found so ignorant as to expect to find safety in a sacred place, when his deserts should be his death. On the same platform with the entrance of this grotto, and in a small recess in the wall, stands a wooden image of our Saviour, which from the circumstance of its having been brought from Rhodes by the knights, at the time of their removal, is worthy of a passing notice. One of the arms is wanting, the feet are mostly decayed, and the legs and body are, by time alone, of a spongy nature; in their appearance resembling a honeycomb. It is indeed a most precious relic of antiquity, and as such highly prized; often have large sums been offered for it, and as often been refused. Retracing our steps a few feet, we observed an iron railing, serving as a door-way, through which we passed, and entered into a small apartment, in which there was an altar, and on which stood, amidst vases of freshly plucked flowers, another and truly beautiful statue of St. Paul, the work of Gaffa, a Maltese sculptor, who flourished at Rome in the fifteenth century. This is also of white marble, and nearly as large as life; the face, arms and fingers are perfect, and decidedly, without exception, the finest specimen of sculpture on the island. With common care, this statue will remain for ages, as a lasting memento of the talent displayed by a native in the line of his profession, so honorable to himself and so creditable to his countrymen. The grand master, when this statue was received, gave orders that prayers should be returned in the church for so valuable a present; and on the anniversary of the decease of the sculptor, it was decreed that a mass should be observed as a requiem for his soul. It is not at all surprising, when it is known that Gaffa is the only Maltese who has ever distinguished himself in this art, that the citizens of his native village should have yearly subscribed a small sum, to have his name handed down to posterity, serving a double purpose, of testifying their respect for his memory, and also to induce others to cultivate their talent in a profession which is, of all in the old world, the most admired by the better class, and, if I may use the word, adored by the ignorant.

Previous to my taking leave of this place, I must not neglect to mention respecting the golden hand and arm of St. Paul, which was also on the altar—and which is but once during the year; and that it is on the anniversary of the day when the apostle converted the inhabitants of the island from being the worshippers of idols, to be the followers of Christ, that this valuable relic is exposed to the public gaze. My worthy friend

and companion, the Canonico Grech, on my expressing a wish, removed the hand from the altar, and with the assistance of a small wax candle, with which all visitors are furnished, I was enabled to see enclosed within, a bone, said to be the remains of the hand of the apostle; and also to observe, in the small glass case in which the same is placed, the insignia of the duke of Mantua, whose property and gift it was. Respecting the modern history of another hand, that of St. John, which was far more prized by the order, I would state an anecdote, which occurred at the time Bonaparte was passing through the island on his way to Egypt. It was customary also, at that period, on St. John's day, to expose this hand to the gaze and admiration of the people, on a finger of which was a valuable ring, with a large diamond in the centre, the gift of one of the order: by touching a spring this brilliant would open, and present a decapitated image of the apostle to the view of the beholder. It may be unnecessary to add, that the first consul was much pleased with the ingenuity which had been shown in the mechanism of the ring, and placing it on his own finger, pointedly remarked, that it could not be of any possible service to let it remain for ages to come, as it had for centuries past, to be concealed amidst the treasures of the church; but to him, who was on his way to conquer the Egyptians, and introduce christianity among the wandering tribes of Arabs in Africa, it might be of the utmost service, as he doubted not but that the influence of the apostle; or in other words, that the charm which the ring possessed, would preserve him from dangers to which otherwise he would have been necessarily exposed. The French officers were pleased with the reasoning, and admired the wit of their general, while the canons in attendance gave their consent only in their silence, deeming it most politic, as it certainly was most prudent, to yield the ring without murmuring, than, by complaining, to have it followed by the golden hand, and the precious bones therein contained.

It will to the reader doubtless appear a most curious circumstance, that one of the Ottoman emperors, who obtained possession of this relic at the conquest of Constantinople, and who, during his long reign, distinguished himself for his enmity to the christians, should have presented so valuable a token to the grand master of a band of soldiers, who styled themselves as the bulwark of christendom, and on whose admittance as one of the order, it was necessary an oath should be taken, testifying their eternal hostility to the followers of Mahommed, and signifying their readiness at any time to sacrifice their lives in defence of their religion. This mystery is, however, explained in the Turkish history of that period, into which I shall enter most fully. On the death of "Mahomet the Great," at Genisen, a city of Bythinia, Anno Domini fourteen hundred and eighty one, his two sons, Bajaret the elder, and Zirimus, made pretensions to the Ottoman throne, the former by right of birth, which the latter disputed, stating that although being the younger, he was born when his father was reigning over the Ottoman empire, a plea his brother could not make, and which was a sufficient reason, in his opinion, to authorise his making any attempt to claim his rightful succession; and stating also, that he was supported in his demands by many of the most powerful chiefs in the Turkish dominions. After vari-

ous intrigues and skirmishes, with as various success to each of the contending parties, the matter of dispute was terminated, by the result of which it was proved, after a hard fought battle, and with great slaughter on both sides, that the fortune of Bajaret, conducted by the policy of Achmetes, who was the best general in the Turkish army, and who was greatly beloved by the soldiers, had prevailed against Zirimus—he having been compelled to fly first to Iconium, and afterwards to Cairo, where he begged the protection of Caytheina, who was at that period the powerful sultan of Syria and Egypt. On coming before the emperor, Zirimus, or as he was more generally known, Zemes, made one of the most pathetic and powerful speeches narrated in the page of Ottoman history,—wherein, after describing his ill-fortune, and stating that his brother would rather have him his enemy than his friend—would rather drive him into exile than make him a partaker in his counsels—he desired the sultan to send ambassadors to Bajaret, to request him to grant his brother a small portion of his dominions to rule over, and which request, he said, if refused, to quote his own words, he “would go with fire, sword and slaughter, by secret and open force, by right and wrong, and hatred, will vex my hateful brother by all manner of mischief, by all manner of revenge. Neither will I make an end of confounding of all, until I either be received into a part of the empire, or else, together with my life, will leave those desperate and lost things for him alone to enjoy. For I deem it much better quickly to die, than, with disgrace and infamy, to protract a lingering, loathed life.”

By permission of the sultan, Zemes employed the period which must elapse for the conclusion of this embassy, in making a pilgrimage into Arabia, for the purpose of worshipping in the temple of Mahomet at Mecca, and visiting the place of his sepulture at Medina. It was all, however, to no purpose, as on his return to Cairo, he found that the answer which had been received from Constantinople, was any thing but agreeable to his wishes or favorable to his designs. The king of Caramania having been made acquainted with the result of this embassy, and conceiving it a favorable opportunity to attempt a recovery of a portion of his dominions, which had been seized upon by Mahomet the Great, made proposals to Zemes to join his forces, and to declare war against Bajaret. The terms were readily accepted, and their respective armies united. Bajaret having collected a force of two hundred thousand men, soon scattered his enemies, and compelled his brother to fly to the coast of Silicia, where he embarked in a Turkish galley, and sailed for Rhodes: arriving safely at that island, he was well received by D'Aubusson, who was at that time the grand master—was promised the protection of the order, and a favorable mention of his cause to the other great kings and princes of Christendom.

Zemes, at the moment of his departure from Silicia, shot an arrow on shore, to which the following note was attached, and which on its receipt by the emperor, caused to him much fear and uneasiness, when in after life ‘trouble bent him to the earth.’ “Thou knowest, most unkind and cruel brother, that I fly not unto the christians—the mortal enemies of the Ottoman family—for no hatred of my religion or nation; but enforced

thereunto by thy injurious declining, and the dangerous practices which thou incessantly attemptest against me, yea even in my extreme misery. But this assured hope I carry with me, that the time will come, when thou, the author of so great wrong, or thy children, shall receive the just guerdon of this thy present tyranny against thy brother.” The sultan, not wishing that his brother should remain on so friendly terms with such a distinguished band of warriors, sent ambassadors laden with presents, and among others with this identical band of the apostle, and a large sum of money, to request that Zemes might be delivered into their hands; this being refused, a treaty was formed, by which it was stipulated that the Turkish prince should remain in honorable captivity; that he should not be permitted to league with the powers of Europe, against his lawful sovereign; and for this consideration, on the first of August, a yearly sum of thirty thousand ducats “was to be paid into the treasury of the Rhodian knights.” Zemes, after a long captivity at Rhodes, was delivered into the hands of Innocentius, Bishop of Rome, A. D. 1488. For this political service, the grand master was made a cardinal, receiving all the honors and emoluments consonant with such a title. On the death of Innocentius, Alexander, his successor, fearing the power of Philip VIII, who had invaded Italy with a large army, leagued with Alphonsus of Naples, against whom the French king had declared war; and, sending ambassadors to Constantinople, asked the assistance of the sultan. Bajaret, by his minister, Dautius, intimated that on certain considerations he would grant all the relief in his power—sending at the same time a letter written in Greek, in which he desired Innocentius to poison his brother, saying that he was of a different religion from him, and adding, that Zemes might escape from his confinement and cause much trouble in his empire. “For the performance of this request, he promised faithfully to pay unto the bishop, two hundred thousand ducats, and never after, as long as he lived, to take up arms against the christians.”

Well may the christian blush, when he is informed that this Roman prelate, not only gave his consent to this base proposition, but did, with his own hands, poison this Turkish prince, with a white powder of a pleasant taste, which was by the bishop mixed with the sugar which Zemes was accustomed to mingle with “the water which he commonly drank!” This occurred in the year 1495, and on the seventh year of his confinement at Rome.

Many historians have condemned, and we think justly, the conduct of D'Aubusson for having received this Turkish fugitive, if he could not protect him. He should certainly have permitted him to have left, as unshackled by his Rhodian prison, as freely as he came to its gates—and not, for the hand of St. Paul, and a yearly stipend, have consented to act as a jailer to the sultan, which, as has been remarked, “is the foulest stain which lies upon the fame of the order.” For his delivery of Zemes, one writer observes, that the grand master lost all the renown he had won in that memorable siege, in which he proved the victor, and in which he so lavishly shed his blood, by the mercenary policy which induced him to violate the rights of hospitality, and consign the wanderer to a cruel duance. Some

historians, however, have attempted to excuse the conduct of D'Aubusson to his royal guest. "William de Jalignani avers that the grand master never guaranteed safe conduct to the fugitive, nor even passed his word that the order would stand between him and his brother's wrath." We cannot see the point of this author's argument. The knights were, by their position and their oaths, bound to protect all who might flee to them for protection—but more particularly one who had left the faith of his fathers; so deadly a sin in a Musselman's eye—"was a prince of a noble soul—deeply versed in oriental literature—master of several languages, and famous for his deeds in war."

If the knights, who were thought by the christian world to be always at war with the sultan, could only maintain their position, by acting as his jailors, and afterwards turning traitors to him, who, trusting to their reputation, had placed himself in their hands, it would have been far better for them to have sooner resigned their fortifications and maintained their honor. William de Cadrusin, another writer, argues that the grand master "had no alternative but to accede to this base proposition, or bring down the implacable vengeance of Bajazet on Rhodes." In our opinion, let the consequences have been what they might, a Musselman's friendship ought never to have been purchased by christians at the price of injustice, imprisonment, and poison. With regard to the two Roman bishops, Innocentius and Alexander, for their conduct nothing can be said in extenuation. The one purchased his prisoner, the other poisoned him—"his murderer having received from Bajazet three hundred thousand ducats as the price of his blood."

Having given this portion of Turkish history, intimately connected as it is with this sacred relic of Saint John, and also with the actions of those warlike priests—several of whom were, not many years after, driven from Rhodes, and established at Malta—it may not be uninteresting briefly to narrate the fate of those illustrious persons, who first or last were actors in this treacherous and cruel scene. The vengeance of heaven appeared in a singular manner to pursue all who had, by thought, word, or deed, injured the unfortunate Zemes. Indeed, had he lived, this Turkish prince could not have meted to his enemies a severer punishment than each in his turn received. Achmet, by whose bravery, military tact, and great popularity, the army of Zemes was routed, was, on the second attempt, strangled by the command of the sultan, who feared his power, and unjustly looked upon him rather as a rival than as a brave and faithful general, to whom in a great measure he was indebted for his seat on the Ottoman throne.

Bajazet, in 1512, and after a fortunate reign for the Turkish empire of nearly thirty years—(during which he had been at war with five kings of England, Edward IV and V, Richard III, and Henry VII and VIII; with three of France, Louis XI, Charles VIII, and Louis XII; with two of Scotland, James III and IV,) met that cruel fate at Adrianople, and at the instigation of his own son, which he himself had allotted to his brother Zemes. How, to the letter, was the prophecy verified? Hamon, his Jew physician, having committed this treacherous act, returned to Constantinople, to receive ten ducats a day, promised by Selymus. He

was, however, never afterwards seen; having, as was generally supposed, received, by his speedy execution, the just reward of his labors.

Of D'Aubusson it is said, "that horror and shame humbled his grey hairs to the dust, when he learned the tragical termination of his victim's (Zemes) life; and the circumstance of his being compelled to conceal his detestation of the murderous act, gave additional poignancy to his grief. At eighty years of age, Peter D'Aubusson died, and notwithstanding these shades on his otherwise illustrious character, the tears of his knights followed the saviour of Rhodes and the buckler of christendom to his grave."

During the same year in which D'Aubusson died, 1503, Pope Alexander VI was also deceased; "a monster who had too long harassed the world with his crimes; having perished by inadvertently quaffing the contents of a poisoned goblet, which he had drugged for the purpose of shortening the life of one of his friends."

Before closing with this notice of the hand of Saint John, we would state, for the information of future travellers, that we have heard that the true sacred bone of the apostle is now in the collection of the late emperor Paul of Russia, having been sent to him by Hompesch, the last grand master, at the expulsion of the knights from Malta. The one shown at the present day, and so much valued by the Maltese, is a fac simile, and may answer the purpose for which it is used, as well as the original.*

In my next I shall make further mention of Citta Vecchia, and of our clerical companion, the Canonico Grech. W.

* There is nothing which in the eye of a Protestant would make this relic sacred, save that it was with the christians when Stamboul was a christian city. The chequered scene through which it has passed, carries with it, in my opinion, the only idea of sanctity, with which its history is in any way connected. Seven cities have been named in ancient times as each being the birth-place of Homer, and five hands will now be shown in Europe in as many churches, and all are the true ones of the apostle, if a stranger would believe the priests who show them. It is, however, certain, that the emperor Paul, who was appointed grand master of the order, on the receipt of this relic, put so much faith in its history, as to erect over it a church at St. Petersburg which still goes by the name of St. John, from the circumstance of this hand being placed on its altar.

LINES

To the Memory of Mrs. Anne G. Davis, of Natchez, Mississippi.

There floats upon the still and starlit air
A wall of anguish, borne from breaking hearts
For the lost idol of their house: the lov'd,
The gentle one, who in past years of dear
And tender intercourse, had so entwined
Her soul with their's, that Hope could take no hue
Of brightness, which did not wreath its halo
Round that fair and shadeless brow.

And thou art gone! to that far land,
Where faded hopes, nor with'ring fears,
May throw their shadows o'er the band
Of seraphs from this vale of tears.

Why should we mourn thy early doom?
Thy spirit was for earth too bright;
And Hope can throw around thy tomb
An Angel's robe of dazzling light.

Oh love! a mockery thou art!
The mightiest passion cannot claim
The power to thrill the pulseless heart,
And bid it wake to life again.

Sweet spirit of the early dead,
Still linger 'round thy lonely hearth,
And shed upon one earth-bow'd head
That Hope which had in Heaven its birth.

THE MOURNER COMFORTED.

BY MRS. L. H. SIGOURNEY.

"My boy was beautiful; and he is dead!
Ask me no more; for I would be alone—
Alone, to weep."

Long flowed that mourner's tear;
And then, beside the Bible, she knelt down,
Laying her cheek upon its hallow'd page,
And said, "*God comfort me!*"

And as she clos'd
The fervent prayer, methought a still, small voice,
Bade the swoll'n surges of her soul, *be still*;
That He, who walk'd upon Tiberia's lake,
Ruling the midnight storm, might thither come,
And save from shipwreck.

Then, with pang subdued,
Memory went wandering to the lov'd one's grave,
Marking in every bud that blossom'd there—
In every joyous butterfly, that spread
Its radiant wing amid the flowers—a type
Of glorious resurrection. Every drop
Of dew, that sparkled on that turf-clad mound,
Was holy to her. Even the bitter grief
That made the parting hour so desolate,
Put on the robe of humble faith, and said
"Tis well, my Lord,—well with the little one
Who dwells with thee."

And then, methought, she heard
Sweet sound of heavenly harpings,—and behold,
Celestial gleamings of cherubic wings,
And 'mid the chant of ransom'd infancy
Unto its Saviour, caught the tuneful voice
Of her own cherished nursing.

So, her lip
Join'd in the praise. For how could she forbear
To thank her God for him, who ne'er should taste
Of trouble more.

Was it the tender tone
Of him, so often cradled on her breast,
That whisper'd, as she lay that night, in dreams?
"Oh mother, weep no more!—but with a heart
Of holy love, hold on yon shining path,
And come to me. For He, who took on earth,
Young children to his arms, will bid in Heaven
The mother find her babe. So, keep thine eye
Clear from the grief-cloud—for the time is short—
The way is plain. Dear mother, come to me."

BANCO: OR, THE TENANT OF THE SPRING:

A LEGEND OF THE WHITE SULPHUR.*

PART I.

Many Summers have passed away,
In merry mirth and roundelay,
And Springs and Autumns, closing on
The season's change, have come and gone.
And countless days, in rapid flight,
Have waned away their morning light,
In that fair vale they call the bless'd!
Where smiling Nature loves to rest.
Where all her witching beauties reign,
In glory o'er the bright domain;
And where she leads on every stream,
The ripples dance in playful beam.

Where gushing streams of silver lave
The bending trees, whose tresses wave
In rich and fragrant verdure bright,
Of spreading leaves; which shade the light
Of midday suns: while sparkling rills
Leap o'er the thousand varied hills;
Whose diadems of verdant green,
Like distant trophies of the scene,
O'erlook the shining plains beneath,—
Of golden fruits and blooming heath.

It was a land where all was bright—
It seemed as nothing there could fade:
So full of promise and delight,
By Angels or by magic made.
The woods and vales, and rocks among,—
With richest jewelries were hung,
Of crystal gems of ev'ry hue,
All moulded from the ev'ning dew.
The flowers were of fairest bloom,
And every breeze that wafted by,
Was freighted with a sweet perfume,
As fragrant as from Araby.

A limpid lake, whose silent stream
Was quiet as an infant's dream,
Flow'd by, unruffled in its bed,
To other vales; but where it led
None ever knew: for those who tried
To track its course—came back no more,
To tell their tale: they may have died,
Or landed on some distant shore.

Who dwells within this Paradise?
Where are the spirits of the land,
Who warm beneath its summer skies?
What Queen or Beauty has command?

No sound of music wakens there—
Save from the carols in the air,
Of singing birds on gayest wing;
And none can see an earthly thing.

* This beautiful little poem, sent to us by a friend, was written by a gentleman at the White Sulphur Springs, as the request of a lady, who wondered why so celebrated a region had never produced a romance. It was written in the course of two evenings, in answer to the challenge.—[Editor S. Lit. Mes.]

No voice of life—no living trace—
Is seen of all the mortal race,
If such they be, within this vale—
Of whom tradition has the tale.

For ages long, in faded time,
There liv'd within this sunny clime,
A fairer race, than ever earth,
'Tis said, since then has given birth.
In days whose ever-constant wing
Of pleasure, if they even changed;
But varied, new delights to bring,—
In joys they lightly, freely, ranged—
Without a care to mar with strife
One moment of their rosy life.

But, like the world, if nothing less,
Than bliss was ours; or pleasure true;
We'd murmur at our happiness,
And look around for something new.

The legend runs—it was their creed—
Some magic spell their souls confined,
And from the charm they would be freed,
If in the valley they could find
The stream of life!—whose crystal flow,
Was brighter than the silver's glow:
Whose pearly drops of liquid white,
To pleasure would give fresh delight:
Whose virtues, fairy ban would sever,—
And all who drank, would live forever.

PART II

It was a soft and gentle night—
The moon was streaming forth her light,
And so resplendent in her ray,
It seem'd as if it still were day.

The air was still—no sound was heard,
Save from the hum of houri bird,
Returning late on restless wing,
From some feathery gathering.
And now and then the whirling by—
Of insect bee or the fire-fly.

When, on a high and greenwood steep,
Which overhung a ravine deep—
(So dark and drear, that gloomy dell,
It had the name of "Witches' Well.")
A female form! serenely bright,
Was seen beneath the pale moonlight;
In gesture wild, and stranger mood,
And sighing in the solitude.

Whate'er she be, of earth or air—
Her features are divinely fair.
Her hair looks made of golden strings,
With here and there an azure one;
And head-dress form'd of blue-birds' wings,
She seems some Seraph of the sun!

She sleeps—she dreams—or seeming dreams:
What magic light about her streams?
It plays in circles 'round her brow,
And there, in fire, it settles now.

A voice, as from the "Witches' Well,"
In tones of not an earthly strain,
Then on her ear thus deeply fell;
And thrice it sounded o'er again:

"Light of the Sylphs! we've heard thy sigh,
"It came upon the rainbow high:
"We've tried it with the sacred dew,
"And find thy wish is pure and true.
"But all the sighs that ever fell—
"From Sylph! or Maid! or Eastern gale!
"If pure as e'en the green-fern bell,
"Would nothing now, thy wish avail.

"Thy kindred from the land have gone.
"In fruitless hope and endless toil,
"For anxious years they wandered on;
"And now are wasted from the soil.

"They all went forth to seek the stream—
"Whose vision often in thy dream,
"In all its fancy-colored light,
"Has broke upon thy raptur'd sight.
"Some went up, by the silent lake,
"And some went 'round the mountain's side,
"Through dreary wild, and forest brake;
"But none came back—they all have died!
"Many had gain'd the wish'd-for site;
"But, faint with terror and affright,
"All, one by one, they perished there—
"And left you here—sole Bride of Air!

"It was decreed—it was their doom—
"They would have faded soon or late:
"(The fruits and trees no more will bloom
"Within the vale for them :) for Fate
"Had number'd every happy day,
"That wing'd their moments here away.

"One measure of the fabled stream,
"Would soon have broke their happy dream,
"Of sweet existence; and the cares
"And strifes of mortals, had been their's;
"But none have quaff'd the stream, while each,
"Who sought it, went within its reach!

"If thou would'st seek and thou would'st know,
"Still more of all this tale of woe;
"And, knowing all, still sigh to gain—
"The fount! thy wish will not be vain.
"'Tis written—'In the cycle's wane
"The last of all the Sylphs shall gain
"The sacred wand, and break the spell—
"That binds the waters in the dell.'

"The monster Banco keeps the spring;
"He walks around the magic ring,
"Where there within the waters wait
"To break from-out their restless state.
"A savage wolf! his horrid yell,
"Wakes up the mountains of the dell.
"Bound by a spell, he cannot move,
"Nor from without the circle rove.
"Whilst thousands of thy better race,
"Have ceas'd to live within that space!
"Have been for him, his sole repeat—
"The fairest were devour'd the last.

"And Banco! sleeps but once a year:
 "His sleeping time is drawing near.
 "And now he's famishing for food,
 "For none have broke his solitude
 "For three whole days,—and he longs for more
 "Of his fav'rite Sylphs, and hungers sore.

"If thou wilt seek, now Sylph awake!
 "And haste, and speed thee up the lake.
 "A skiff, made of the light yew-tree!
 "Is waiting there, to carry thee,
 "With the speed of light, thro' elfin dells,
 "To the fabled fount, where Banco dwells."

The Sylph awakes—the voice is gone.

Was it a fairy, elf, or sprite,
 Or old witch, who hurried her on?

The Sylph awakes—but not in fright;
 For she was glad: and it pleased her so,
 That the time had come, when she could go,
 To that valley far! which she doubted not—
 Was, of all the world, the sweetest spot.

PART III.

The moon is shining lovely still—
 Her beams are playing on each rill:
 She's sleeping quiet on the lake,
 And peeping thro' each wood and brake.

On the lake a shadow is seen—
 Skimming on as the heron flies;
 And where a ruffle ne'er had been,
 The curling waves now fast arise.

The shadow is the yew-tree skiff,
 Bearing along the Sylph so fast—
 While every highland rock and cliff,
 Like lightning streaking by, is pass'd.

She passes by the dead-tree brake,
 Where waning forms, thrown o'er the lake,
 Appear, when shaken by the storm,
 Like skeletons of human form.
 She passes by the fern-sward heath—
 High up the lake; and there, beneath
 The maple trees, in silver sheen,
 The elfs are dancing on the green.

And as she speeds, for miles along,
 She faintly hears their notes of song:
 "Come, dance around the green yew tree,
 "And let the dance go merrily;
 "The Sylphs are wasting from the loe,—
 "And morning's dawn no Sylph will see!"

The bark has stopp'd—with lightsome leap,
 The Sylph is on the highest steep;
 And there, bewilder'd with amaze,
 She pauses for awhile to gaze.

And Banco sleeps!—he little dreams—
 How delicate a Sylph is near:
 He's dreaming fast of other streams,
 He'd rather watch, than famish here.

The Sylph has gain'd the inmost ring,
 And there beholds the glist'ning spring,
 "The stream of life," at joyous play—
 And oozing in its wonted way,
 Beneath the clear transparent vase,
 That holds it, at the mountain's base.

With eager joy, her willing hand,
 Has seized the white and mystic wand,
 And with a light and gentle stroke,
 The spell that bound the waters broke.

There comes no stream so soft and bright,
 Whose promise made the Sylphs delight.
 But breaking forth, with startling roar,
 And rushing down the mountain side,
 The waters now in torrents pour,
 To flood the valley far and wide.

Where's Banco? sleeping?—No! the sound
 Has freed his spell—and with one bound
 Of desp'rate strength, he's cleared the steep;
 While closing on—the waters sweep,
 In ocean streams, o'er lake and vale:
 When thro' the air is heard a wail—
 A howling wail—and fearful cry—
 While rolling thunders break the sky.

And Banco seeks the mountain's brow,
 (The monster wolf is swimming now,)
 He's failing fast—his strength is gone—
 And by the tide is carried on.

The wolf has reach'd the summit hill—
 He looks around: before his eyes—
 Upon the waters, gaining still—
 A thousand flitting spectres rise.
 And there his troubled vision sees
 A murdered Sylph! with torch on high,
 On every wave: which fast the breeze
 Is urging on, and bringing by.

The wolf is stricken with despair—
 He crouches like a monk at pray'r;
 And while the waters 'round him swell,
 He sends on high his horrid yell.

But, fiendish wolf! the waters roll
 In swelling surges o'er his head;
 And Banco! with his troubled soul—
 Now yells among the restless dead.

Long years have passed—a merry ring
 Is ever seen around that spring,
 Of mortals, length'ning out their dream
 Of life's enchantment, at the stream—
 (That stream of life, whose crystal flow,
 Is brighter than the silver's glow.)

From every clime—from far and near—
 They come to make their homage here.

Old Age, he comes—his gladden'd eye
 Anew with lustre sparkles high;
 And while he quaffs, his heart again
 Goes back to youth—forgot his pain.

And Beauty comes, with face so bright !
 She drinks, and smiles with new delight ;
 And cheeks that have grown brown with care,
 The pearly stream makes wond'rous fair.

And oft a tear is there let fall—
 For that fair Sylph ! who perill'd all :
 Who gave a life, made up of bliss—
 To freshen our's—with joys like this.

And then again—remember'd still—
 Where Banco sleeps is now "WOLF HILL."

And many a boy, by the mountain's side,
 There tells the tale how the old wolf died.

White Sulphur Springs, August 10, 1838.

THE COPY-BOOK.

NO. IV.

By C. C*****, of PETERSBURG, VA.

MY COUSIN BOB.

I took it into my head once, to pay a visit to my cousin Bob. I am afraid he drank too much, though I never saw him intoxicated. However that may be, his house wore a neglected air—broken windows—dusty looking-glasses—torn curtains. The cows had broken down the hedge—the garden fence was decayed—and the gate choked up with grass. Lean, gaunt, hungry hounds, were dozing in the sun.

Cousin Bob had never been farther from home than to Richmond, and seldom extended his thoughts far from home. As insects assume the color of the leaf they feed on, so he borrowed the complexion of his politics from his newspaper ; and reading only one side of the question, he became dogmatical in his opinions, and seemed to feel pity for a man who should be so ignorant as to differ from him. His library was neither large nor select, consisting of some odd volumes of Shakspeare, Addison, Goldsmith, Scott's novels and Miss Porter's, Riley's Narrative, Mason's Farrier, Buchan's Family Medicine, Scott's Lessons, and the Almanack, which last was the only one he ever opened, and he frequently mentioned that there was some very good reading in it. With this relative of mine I passed some days in the year eighteen hundred and blank. The incidents of my stay were few and simple, as will appear in the succeeding chapters.

WARWICK.

There are no antiquities in Virginia except some of the old maids ; but Warwick is an old fashioned structure, of perhaps the reign of William III, of happy memory. Rooms oak-pannelled—inside folding window-shutters—the house quite ruinous and deserted—martins build their nests in the walls—the dining room is occupied by an overseer and his family—the rest of the mansion, naked and untenanted—unhinged doors and broken windows—a sad picture of decay. The family portraits, the hereditary heirlooms, were gone—a few fine old English prints survived ; but time has

no doubt ere this consigned them also to the tomb of the Capulets. I observed an antiquarian looking-glass on the wall, surmounted by an eagle, whose head had been knocked off, no doubt by some old tory.

Around the house spreads a smooth lawn—a clump of patriarchal oaks fanning their leaves in the breeze. Under these, perhaps, the naked Indian has reposed his limbs, wearied with the chase ; and the children that played under their shade, have grown up and been scattered, and many, perhaps, descended to the dust, while these old trees still lift their heads to the winds and defy the storm.

In front of the house a river meandered lazily through broad, flat meadows of tall grass, in which cattle were wading for pasture. The roses of evening were fading in the western sky, when, mounting my horse, I bade adieu to Warwick, whose present state seemed an emblem of life—the quiet and pomp of wealth had yielded "to dumb oblivion and decay." The coachman, the footman, the butler had disappeared, and the hunter's horn had ceased to rouse the early dawn. These scenes are forgotten, or recollected only by some superannuated slave, or some small antiquary like myself.

OLD DUNMORE.

After we had finished our tea, cousin Bob moved an adjournment to the porch, where, he observed, we should enjoy the twofold advantage of moonlight and mosquitoes. My kinsman, leaning back in his chair, threw his legs over the railing, and having thus brought his head and his heels nearly to a level, he called for his pipe. In the course of the evening, our conversation happened to take a genealogical turn, and I learned several new particulars of my forefathers.

Cousin Bob, finding me quite interested in these reminiscences, sent for old Dunmore. He shortly made his appearance—a tall, erect mulatto of about seventy, or according to his chronology, for slaves always exaggerate their age, eighty large odd. He lodged, as it appeared, in a cabin in the orchard, by himself, with no companion but a cat, to which he had taken a sort of Robinson Crusoe fancy. As the priestess of Delphi would never utter her oracles until an offering of gold was made to Apollo, so an old negro will never spin long yarns about old times without a dram : a dram in all such cases is a *sine qua non*. Cousin Bob gave the old fellow a glass of whiskey, adding, "Now he will tell you lies enough to shingle a barn." Dunmore being thus put upon his *voir dire*, underwent a cross-examination on his genealogical reminiscences, which being ended, his master dismissed him with another dram of whiskey and the parting compliment of "It's all a pack of lies." When he had shut the gate after him, my kinsman remarked, that there was some truth in the old man's story. After all, the ancestral developments of Dunmore and his master did not prove to be of any great consequence, as will more clearly appear in the next chapter.

GENEALOGY.

The first stock of our family we take to be Adam and Eve. Not caring, however, to push matters so far back, we are content to begin with a worthy gentleman who came over, about the year 1700, from England. He located several thousand acres of land on the river before mentioned ; and by the culture of tobacco and

indigo, he came to be the master of a large fortune and a great number of slaves. He built Warwick-house, and several others on the river and ; his tombstone and that of his wife I found half covered with sand in the garden. About the time of the siege of York, Lafayette encamped at Warwick with a division of the American army. Lafayette, with his staff and suite, had his head-quarters at the great-house. Dunmore had the honor to brush the general's boots—gold and silver being very plenty, he got a guinea for his share. Lafayette had with him two servants, a negro and a Frenchman. The head of Warwick-house at that time, the great grandfather of cousin Bob and me, was a good whig, but his wife, who happened to be the daughter of a former governor of the colony, unfurled a tory banner. The merits of the revolution was frequent matter of debate at table and by the fireside, the family upon such occasions forming a sort of domestic committee of the whole house upon the state of the colonies. My great grandmother, dear old lady, was remarkably eloquent upon these occasions, (the opposition always is,) and seldom failed to have the last word ; but, in spite of her efforts, she was pretty generally thrown into a minority. In one of these political conclaves it was moved and carried, my great grandmother contradicente, to discontinue the use of tea. The old lady entered a formal protest against the whole proceeding, declaring that she would drink her cup of tea in spite of general Washington, congress, and the continental army to boot. She kept her word, drank her dish of tea in her closet, and, after the war, declared that nothing could add such a flavor to the herb as to think it was treason to drink it.

HAREWOOD.

By this name I shall distinguish one of the old plantations on the James River. The river is three miles wide there, and from the opposite side the front of Harewood appears to be white—the effect of the white pillars of the porticoes—but on a nearer approach, it proves to be a heavy square edifice of brick, with a sharp roof, and rows of dormant windows, as old, perhaps, as the time of Charles the Second. Well built store-houses and offices of brick shew that this was a plantation of consequence in the old colonial times. In the hall may be seen the family coat of arms, and several portraits, one of them of the founder of the house, a youth in robe and sandals. In the dining room also are a number of portraits, some of them, perhaps, from the pencil of Sir Godfrey Kneller ; and over the mantel is carved the family escutcheon, under which hangs a design from Hogarth. In the drawing room is a full length portrait of General Washington, standing by a brass cannon, thoughtful ; a servant holding his horse—in the back ground is Princeton College, and a party of British prisoners of war. A print of Bunker Hill battle, and the fall of Montgomery at Quebec ; and a series of illustrations of Homer,

“Videt Iliacas ex ordine pugnas
Atridas, Priamum—que et ævum ambobus Achillem.”

Portraits, prints, chessmen, books, battledores and an antiquated harpsichord, complete the catalogue.

My favorite part of the house was the blue room, up stairs, to which belonged two closets full of books—a

miscellaneous mass accumulated during several generations—containing a little of every thing, from Plato to Peter Porcupine.

From the windows of this room the James lay in full view ; sometimes smooth and clear—purple clouds reflected in its glassy bosom—or swollen and turbid, bearing on its foamy tide hay-stacks, timber trees, heaps of cornstalks and floating brushwood ; and again a stormy day would toss the white caps, and curl the green and ridgy waves. Ships lie at anchor, taking in tobacco and cotton ; and the cry of the sailors at work, is heard across the water ; and occasionally a steamer passes by, the parted waters heaving a rippling surge to the shore.

In spring, the fruit trees shower their blossoms, the flowers bloom, and the bee, humming, “quaffs his nectar from the cups of gold.” The mocking-bird, perched on the top of a cherry tree, repeats his mimic recitativo, while the oriel, like a bolt of fire, darts warbling through the foliage, and the butterfly revels in the sunshine, or reposes amid beds of flowers. A broad wheat-field waves, its bearded stalks bending to the breeze ; and a corn-field hangs its silver tassels in the sun, and luxuriant clover spreads its rich carpet. Here and there a beech tree or an oak has been spared for its beauty or its shade. The negroes are at work in the field ; the overseer seated hard by on the fence, whittling a stick.

Occasionally the uniformity of a country life is varied by a dinner party—a dinner, a ham-drum affair, a nuisance, a bore. After the first glass of wine gone round, the ladies retire, cigars are now introduced, the decanter circulates, conversation proceeds in an easy, slipshod mood—politics, horses, crops. The ladies in the meanwhile in the drawing room ; some play at battledore, or strum on the old harpsichord, or look over a book of prints—and others discourse of weather, health, children, fashions, sermons, flowers, new novels, &c.

The sun is now descending the western sky—coaches are wheeled up to the door ; silks rustle ; adieux are exchanged ; and Harewood is left to its accustomed solitude.

AN ESSAY.

Pythagoras, it is said, imposed absolute silence on his disciples for a number of years. We may presume to doubt whether this philosopher ever carried his scheme into effect. However that may be, the singular system of Pythagoras was undoubtedly based on a great truth. Suppose a man of liberal education should suddenly find himself immured in a naked, unfurnished room, without books, or society, or any single external resource left him. Imagine that he could endure a life of this desolate sort for a considerable length of time, supplied with food by an unseen hand, and that he should have the fortitude to retain a firm and constant mind in this lonely apartment ? Perhaps the case just hypothetically presented, has in all substantial points occurred, (and not unfrequently too,) in real life ; as when Raleigh was the second time, (after his unsuccessful expedition to Guiana,) closely confined in the tower of London ; or Galileo, when imprisoned in Italy, or Cervantes in Spain. As far as the gloom of confinement would permit, an energetic mind would not wait

long before it would begin to inquire what stock of resources it still had left within itself; deprived now of all extraneous helps, it must hang "suis ponderibus librata," on its own centre, poised. Objects of sensation being now narrowed down to a small number, the mind is almost wholly occupied by reflection,

"Et sola in sicca secum spatiat arida."

The first subject which would engage his thoughts, would, no doubt, be his confinement, its causes, the persons who had brought it about, its probable duration, and the like. When this matter was settled in his mind, so that no farther action of the mind could possibly result in deductions more satisfactory than those already attained, he would naturally turn the current of his reflections into some other channel. He would recollect the various events of his life, from his childhood to the present hour. The scenes of past life would probably come into his mind, disconnectedly, at different times, and without reference to chronological order. Incidents would turn up in the mind, when least looked for, and most remote from the thoughts immediately preceding, by an involuntary process of memory. He will recall the books he has read; familiar passages will recur—he will remember precisely the page or the part of the page where they are found. He will no doubt muster up such pieces of prose or verse as he may know by heart; and reciting them aloud, contrive to vary, by the sound of his own voice, the gloomy silence of his prison. In his mind's eye he would revisit the countries in which he has travelled, the habitations in which he has lived, the school house, the village church, the play ground, the scene of his youthful loves, all associated with his earliest thoughts and tenderest feelings. As the fancy of Milton seems to have soared to a more heavenly pitch, after the world was shut out by loss of sight; so, perhaps, the conception of the person we have supposed will assume a new vigor in his confinement, and images will stand out from the canvass, in a bold and palpable basso relievo, hitherto unknown. After a time, such an one will have surveyed the whole circumference of his mind, and sounded all its depths; and he will then discover with surprise, perhaps, how small a stock of knowledge is really his own, appropriated, inherent, and absolute. He now retains no definite, available idea of subjects, which before he had always supposed to be completely within his grasp. He has now no friend or book to refer to, and what he cannot find in his mind, he is conscious he is ignorant of. He can now form a just estimate of his own intellectual calibre, and strike a balance between his supposititious knowledge and the genuine; the chaff being blown away, he can now securely measure the grain that remains. The mists which at once obscure and magnify, being dispelled from the mind, it would appear in its true light; the circle of mental action would be contracted to its just extent—but what might seem lost in bulk, would be found to be more than made up in density. An humble estimate of our powers is not only consistent with, but, perhaps, indicative of mental faculties of a superior order. Sir Isaac Newton said that he was "only a child on the margin of an ocean, gathering here a pebble and there a shell."

TO A BACHELOR OF ARTS, ON HIS MARRIAGE.

BY A BROTHER A. B.

I did not think, when last we met,
My well remembered cromy,
Thy heart so soon would pay its debt
To love and matrimony.
But truth was ever prone to vie,
With fiction's strangest hue;
And Byron's words are proved no lie,
John S——n, by you.

How could you, John, how could you tear
Those laurels from thy head,
The which have cost as much to wear,
As Jacob paid—to wed.
'Tis not a thing to be despised—
A Bachelor's degree;
And though by you 'tis lightly prized,
I'll keep it long by me.

Mayhap, howe'er, I put the case
Unfairly—let us see:
Wishing, perhaps, to prove your grace
Entitled to A. B.,
You built the syllogism on
Your skill in sieging hearts;
Thinking success would doubly crown
You—Bachelor of Arts.

Alas! we read in Holy Writ,
When Samson tried to show
His strength diminished not a bit,
He died to let us know:
And thus, to prove how seemly peered
Your brow the laurel under,
You left its freshness waste and seared,
And tore the wreath asunder.

Go! like a leper—crowned with shame!
No more presume to fix
The honor to thy recreant name,
Of eighteen thirty-six;
And should again thy comrades tread
Our old familiar hall,
We'll drink to thee, as to the dead,
And blush to own thy fall.

What tho' with minstrelsy imbued,
She sings, as if the tree
Of Cashmere's vale had been her food,
Whose juice is melody?
A different warble waits thine ear—
No zephyr's gentle sigh—
Which will, as year succeeds to year,
"Increase and multiply."

Oh! worst of evils 'neath the sun!
Styled, truly, dear delights;
Who tax, for all they give of fun
By day, our sleep o' nights.
What shape of ill—what mortal strife—
So direful as their squall?
A smoky house—a scolding wife—
Or both—'tis worse than all!

Thrice happy, happy is the wight,
 Who such a doom escapes :
 Yet even now, methinks, you cite
 The fox and sour grape.
 We often slight what enters not
 The circle of our gains,
 And deem unworthy to be sought
 The bliss beyond our pains.

Well—if, indeed, from Hymen's fane,
 We pluck so rich a boon,—
 A nameless rapture, that will wane
 Not with the honey-moon—
 Then be it thine ; but ever mind,
 Thy state extremes are given ;
 'Tis wo complete, or joy refined—
 A taste of Hell—or Heaven.

And she, whose love's unvaried flow
 Is constant as a river ;
 Thy moon in weal—thy sun in wo—
 Thine, only and forever—
 Oh ! cherish, love, and honor her !
 Yet why this charge to thee ?
 As Isaac and Rebecca were,
 My prayer is—ye may be.

And sure I am, that with a heart,
 Faithful, like thine, and true,
 God's blessing, until death do part,
 Will rest upon you two :
 And if the first of woes to fall
 On thee, should be a son,
 I charge thee, by my ditty call
 Him—

WILBUR HUNTINGTON.

Camden, S. C.

THE WIDOWER'S SOLILOQUY.

She's gone ! and I am left alone !
 How sad the moments fly.
 I've heard the doleful turtle moan ;
 And, as she mourns—so I.

Unhappy bird ! I sympathize
 Most deeply in thy wo ;
 And while I listen to thy cries,
 My inward sorrows flow.

Thy mate perchance you'll see again ;
 E'en in thy worst distress :
 But, ah ! that hope to me is vain—
 With angels now she rests.

I've seen the childless mother weep,
 With bitterness untold,
 To see her husband's image sleep
 In death, so pale and cold.

Her pangs I easily could bear,
 And ten-fold more if need—
 If my Eliza still were here,
 To see my bosom bleed.

And what is human bliss, my heart ?
 A rainbow—beauteous, fair :
 A shadow which will soon depart ;
 Its dwelling place nowhere.

S.

THE EVENING PRIMROSE.

'Twas the beautiful thought of a sage of old,
 That o'er each springing flower and plant
 A guardian angel reign'd and watch'd,
 Forever vigilant.

For now I may look on the simplest flower
 That opens its eye in sun or in shade,
 And think that its angel hovers around,
 Until that flower shall fade.

I have been watching, as night came on,
 The yellow cups of the evening rose,
 Which gently bloom when all other things
 Have gone to their repose ;

As if with the stars, and the evening breeze,
 Its angel had come to that sleeping flower,
 And warn'd it, by an unseen touch,
 Of the dewy twilight hour.

And as if it had started from its sleep,
 And felt its silent energies,
 As, one by one, unfolding fast,
 Each petal greets our eyes ;

And, as if entranc'd in silent prayer,
 It look'd up to the stars all night,
 While fall their rays into a heart
 That asks no fuller light.

The evening dews upon it rest ;
 The night wind whispers in its ear ;
 And it sends its delicate fragrance out,
 For all who wander near.

Sweet flower ! to the holy star-light dear ;
 A lovely type to me thou art,
 Of many a grace and virtue hid
 In the depths of the good man's heart.

Faith—that trustingly comes forth,
 And blooms amid the darkest hour,
 And yields most fragrance when unseen—
 Is like thee, fearless flower !

Hope—that through the long sultry day,
 For the eve of life waits patiently,
 And brightens as the night comes down,
 Sweet flower—is likest thee !

And Love—what a type thou art of Love ;
 Giving to all thy odor and hue :
 And Resignation—looking up
 From a tear-like drop of dew ;

And rapt Devotion—kindling as
 The stars come out in the smiling heaven,
 And feeling an answer to its prayer,
 In the falling dew of even ;

And Meekness—purity of soul—
Content—and sweet Humility—
And virtues, many more than these,
May find themselves in thee.

Oh! if an angel attends thy form,
And writes such lessons of truth on thee,
Will not some pitying spirit come
And minister to me?

And make me speak, through all my life,
A true, consistent lesson too;
That I may teach my fellow men
Their Father's will to do?

For life, though like a flower at best,
Can yet, like flowers, instruction give:
O! may some angel, sent from Heaven,
Teach me like them to live!

C. F. C.

REMARKS,

On the Essay entitled "*Washington and the Patriot Army*,"
published in the August No. of the S. L. Messenger.

The author of the above article holds this language—"I deny that that army were ready to clothe any man with the imperial purple: I repudiate the idea that such was for a moment their intention."

To this bold assertion, the biographer of Chase replies thus, and relies on Sparks' Washington, vol. I, p. 381 to 383, where it is thus written:

"The discontents of the officers and soldiers, respecting the arrearages of their pay, had for some time increased; and, there being now a prospect, that the army would ultimately be disbanded, without an adequate provision by Congress for meeting the claims of the troops, these discontents manifested themselves in audible murmurs and complaints, which foreboded serious consequences. But a spirit still more to be dreaded, was secretly at work. In reflecting on the limited powers of Congress, and on the backwardness of the states to comply with the most essential requisitions, even in support of their own interests, many of the officers were led to look for the cause in the form of government, and to distrust the stability of republican institutions. So far were they carried by their fears and speculations, that they meditated the establishment of a new and more energetic system. A colonel in the army, of a highly respectable character, and somewhat advanced in life, was made the organ for communicating their sentiments to the commander-in-chief. In a letter elaborately and skilfully written, after describing the gloomy state of affairs, the financial difficulties, and the innumerable embarrassments in which the country had been involved during the war, on account of its defective political organization, the writer adds—'This must have shown to

all, and to military men in particular, the weakness of republics, and the exertions the army have been able to make by being under a proper head. Therefore I little doubt, that, when the benefits of a mixed government are pointed out, and duly considered, such will be readily adopted. In this case it will, I believe, be uncontroverted, that the same abilities, which have led us through difficulties, apparently insurmountable by human power, to victory and glory—those qualities, that have merited and obtained the universal esteem and veneration of an army—would be most likely to conduct and direct us in the smoother paths of peace. Some people have so connected the ideas of tyranny and monarchy, as to find it very difficult to separate them. It may therefore be requisite to give the head of such a constitution as I propose, some title apparently more moderate; but, if all other things were once adjusted, I believe strong arguments might be produced for admitting the title of KING, which I conceive would be attended with some material advantages.'

"To this communication, as unexpected as it was extraordinary in its contents, Washington replied as follows:

"Newburg, May 22, 1782.

"SIR: With a mixture of great surprise and astonishment, I have read with attention the sentiments you have submitted to my perusal. Be assured, sir, that no occurrence in the course of the war has given me more painful sensations, than your information, of there being such ideas existing in the army, as you have expressed, and I must view with abhorrence and reprehend with severity. For the present, the communication of them will rest in my own bosom, unless some further agitation of the matter shall make a disclosure necessary. I am much at a loss to conceive what part of my conduct could have given encouragement to an address, which to me seems big with the greatest mischiefs, that can befall my country. If I am not deceived in the knowledge of myself, you could not have found a person to whom your schemes are more disagreeable. At the same time, in justice to my own feelings, I must add, that no man possesses a more sincere wish to see ample justice done to the army than I do; and as far as my powers and influence, in a constitutional way, extend, they shall be employed to the utmost of my abilities to effect it, should there be any occasion. Let me conjure you, then, if you have any regard for your country, concern for yourself or posterity, or respect for me, to banish these thoughts from your mind, and never communicate, as from yourself, or any one else, a sentiment of the like nature.

"I am, sir, &c.

"GEORGE WASHINGTON.

"Such was the language of Washington, when, at the head of his army, and at the height of his

power and popularity, it was proposed to him to become a king. After this indignant reply and stern rebuke, it is not probable that any further advances were made to him on the subject."

Does the writer now repudiate the idea that such for a moment was their intention? Will he believe the father of his country, when he produces the very original document itself containing the proposition? With this historical fact before his eyes, it is clear that the essayist does not belong to "The Old Maryland Line," but rather to the militia; rashly plunging in the most heedless manner, into a contest, from which no valor can extricate him. I leave him to settle this part of the case as he may, after perusing the above extracts.

Second. "Look (says he) at the great charter of our liberties—He has affected to render the military independent of, and superior to the civil power,' therefore it is not correct, (as maintained by the author of the sketch of Judge Chase,) that such an offer was ever made to Washington." *A non sequitur, sir.* That very Congress who proclaimed the above sentiment, on the 4th July, '76, before an admiring and awe-stricken world, did, in the latter part of December, of the same year, invest Washington with absolute and dictatorial powers. Sparks, 1st vol., p. 223 to 225, after enumerating the unprecedented powers with which he was now clothed by a formal resolve of Congress, says, "These powers constituted him in all respects a military dictator. They were to continue six months, and in his exercise of them, he fully justified the confidence of Congress, as expressed in the preamble to the resolve, in which it is said they were granted, in consequence of a perfect reliance on his wisdom, vigor and uprightness." Here then, the military was made independent of, and superior to the civil power, for a limited time, by the solemn and deliberate act of that august body of patriots, who had, five months before, sworn on the altar of their country, to make war on the king of England, because among other violations of law he had elevated the military above the civil power! Yet no one ever doubted the patriotism of that Congress; nor is the virtue of our army to be doubted, because of the offer to make their chief a King. History tells us that the fact exists; and that Washington did really exercise the powers of dictatorship so granted, notwithstanding the previous declaration of independence, on which the essayist relies. His position is thus shown to be untenable.

Third. It is said that the halo of glory which surrounded the head of Washington, is not increased in splendor or extent, by his refusal of the offer of imperial power, at Newburg. Why not? "Because the measure of his fame was already full." I answer, if any act was yet wanting, to finish the illustrious character of that unequalled

man, it was this very refusal. Why did he reject the proposition with unmitigated scorn? He looked not back on his well spent life, which was "without spot, or wrinkle, or any such thing;" nor did he repose, for a moment, on the unbidden admiration of a world, astonished by the splendor of his deeds; on the eulogiums of orators and statesmen, or the high toned and chivalric feeling of his troops, who, in the twinkling of an eye, would have drawn ten thousand swords to avenge even a look that threatened him with insult. All these were of no avail with him, when he wrote the letter of May 22, 1782. Love of country alone animated his heart on this as on all other occasions: glory had no concern with it. He was never before placed in so awful a situation, yet did he poise himself on his own lofty integrity, and declared to the army, that he was "at a loss to conceive what part of his conduct could have prompted the address." It seems then, from his own testimony, that his character had been misunderstood by his soldiers. It was, therefore, necessary to undeceive them in this particular—to develop the truth, that he could not be reached by such an offer, and therefore his fame was increased by the rejection. The measure of his glory was not full prior to this event; or why did the chief preserve the correspondence at all, if it were a matter of so little moment as the Annapolis reviewer supposes? Cincinnatus had acquired boundless fame, before the purple was offered to him at his plough, yet who will say that such an act does not constitute the highest gem in the crown of his glory? Why should not Washington receive equal praise as the amiable Roman, for a similar deed? Had Napoleon been at Newburg, would he have replied to the army, as did the American chief, conceding that he had acted on the same theatre with Washington? No, no! Look at his brilliant career, from the bridge of Lodi to the plains of Waterloo, and no one act of his life, can induce us to believe, that he would have rebuked the soldiery in the terms of the letter before quoted. Why? Because ambition alone ruled all his plans and actions. Did it not then elevate Washington to the loftiest pinnacle of fame, when he thus demonstrated that ambition formed no part of his character? True it is, that during his presidency there were not wanting political foes, who endeavored to detract from his character, by charging him with aristocratic and monarchical views. How proudly could he have pointed to the letter of May 22, 1782, in vindication of his honor! To me, it is evident, that this very document would, *per se*, have put to flight the foul accusation, and so was necessary to the preservation of his glory, while it evinced its exaltation.

Lastly. The authority of Lafayette is invoked to sustain the essayist. No man admires that dism-

terested and patriotic soldier more than the biographer of Judge Chase. He loved him from the cradle to this hour. It is said, that he denied the fact in an address, which he delivered on the spot, when paying his last visit to America; and, therefore, the reviewer says it is certainly incorrect, and of course becomes an undesigned imputation on the patriotism of his fellow-soldiers. Be that as it may, the testimony of Washington cannot be set aside; the very letter of the highly respectable colonel, acting on behalf of his constituents, is before our eyes—it contains the distinct proposition, which is rejected by the father of his country in most decisive terms. The case is closed. These documents—canonized by the lapse of more than fifty-six years—sent down to posterity, by him whom the nations of the earth universally call great, as abiding proof of his lofty and incorruptible integrity and patriotism—cannot be nullified by the unsupported assertion even of the excellent and noble Lafayette. *He was mistaken: no more.*

THE BIOGRAPHER OF JUDGE CHASE.

Frederick, August, 1838.

THE DYING CHILD.

BY C. M. F. DEEMS.

It was the holy hour of evening:
The sun had set behind the western hills,
Yet daylight, ling'ring, kissed their lofty tops,
And bathed their summits with its mellowed light.
The earth sent up to Heaven its vesper hymn,
Upon the pinions of the evening breeze:
The little streamlet gently rippled on,
As tho' it would not break the harmony,
Whose modulations hung around its course.
It cannot be that such sweet melody
Would make a discord in the other world,
Where angels tune their golden harps to praise.
The softness of its notes would mingle with
The hallowed sounds that float amid the groves
Of Paradise, but as a younger sister.

It was at such a holy hour as this,
That a fond mother bent her o'er the couch
Which held the body of her dying child.
If on this earth there be a love so holy,
That 't would not stain a sainted soul in Heaven,
It is the deep devotion of the heart
Of a fond mother for her first-born child.

There lay the infant in the arms of death.
It did not seem as though the mortal change
That tears the fair inhabitant of this
Poor, wasting clay, from its frail tenement,
And leaves it desolate, had come upon it.
It seemed as though a mild and gentle sleep
Had thrown its thin veil o'er its infant form,
And the light images of some sweet dream
Were sporting in their fairy revelry.
The veins that coursed their purple streams across
Its little temple, seemed the shadow of
A gossamer's web upon the lily's leaf;

And its thin eye-lids fell so gently o'er
Those deep blue orbs of vision, one would have said
That the sweet babe was listening to the notes
Of sweetest modulation, falling from
The lyres of cherub bands, that waited there,
To waft its pure, unspotted soul to Heaven.
Its tender arms were twined around its mother's,
As if there were one tie the spirit felt
Too strong to sever in a moment's space:
But as the light of life grew dimmer still,
Its little arms relaxed their hold, and fell
Upon its breast.

The mother lowly bowed,
To catch the last breath of her dying child.
It oped its glazed eye to gaze again
Upon the visage whose sweet smiles had been
The sunshine of its life. There came again
A heavy sigh, and the dear babe *was dead!*

The mother gazed upon her lifeless child:
Her fondest hopes had just begun to bud;
But the cold breath of icy Death had swept
In desolation o'er them. The lone tear
That trickled down her cheek, and the deep sigh
That seemed to rend her heart, most eloquently told
Of grief we name, but never can describe.

October, 1838.

NOTES ON THE WESTERN STATES;

Containing Descriptive Sketches of their Soil, Climate, Resources and Scenery. By James Hall, author of "Border Tales," &c. Philadelphia: 1838.

By far the greater part of the region of country, of which this work is descriptive, once belonged to Virginia. This single fact, would of itself impart an interest to this volume, among the inhabitants of the "Old Dominion." But there are other considerations of deeper import, which give an importance to all that relates to the west. It is there, that in little more than half a century, an empire has sprung, not only into existence, but a vigorous manhood. The west can hardly be said to have had a youth. Within a period, less than is usually required to take the first steps in planting a colony, an extended region has been peopled with millions of inhabitants, free, enterprising and independent. An immense *avalanche* of human beings, gathered from the Atlantic states and from Europe, has been gravitated upon the valley of the lakes, the Ohio and the Mississippi, carrying with them the intelligence, the arts and the social comforts of communities, highly elevated in the scale of civilization. If the agriculture, commerce and manufactures—the systems of education, moral and intellectual—the roads, canals, and numerical strength of this region, be viewed in connection with the period that has elapsed since the smoke of the lone wigwam proclaimed that its soil was pressed by none but a savage foot, the mind is lost in amazement. In vain may the history of nations be searched for a parallel case: the record of the world contains nothing that may be compared to it. More than this need not be said, to invest every attempt to depict the great and growing west, with a deep and abiding interest.

The work before us, is embraced in one volume of 300 pages. It makes no claim to present a scientific exposition of the geography, history, or physical condition of the country which it describes. Its chapters constitute a series of familiar sketches of the soil, climate, resources, scenery and business of the west, drawn principally from personal observation—the author having, we are informed, resided in different parts of the west, for near a quarter of a century. These sketches, written with that spirit and gracefulness of manner, which are characteristic of the author's pen, abound with just that kind of information which is acceptable to the general reader, and especially important to those—the number, we are compelled to say, is far from being a small one—who, taking leave of other lands, are pushing their barks into the great tide of western emigration, and seeking, in the fair and fertile plains of Ohio, Indiana, Illinois and Michigan, a new and more inviting field of active enterprise. We shall endeavor to sustain our opinion of the value of the work, by such short extracts as may properly be crowded into an article for a monthly magazine. In speaking of the soil and mineral resources of this region, the author says:

"Nekher is there any supernatural fertility in our soil, which yields its rich returns only under the operation of careful and laborious tillage. It is the great breadth and continuity of our fertile surface, which gives to the west its superior advantages. It is the accumulation within one wide and connected plain, of the most vast resources of agricultural and commercial wealth; and the facilities afforded by our country, for concentrating and using an unlimited amount of wealth, and bringing into combined action the energies of millions of industrious human beings, on which are based the broad foundations of our greatness. With the breadth of an empire, we have all the facilities of intercourse and trade, which could be enjoyed with more limited boundaries. Our natural wealth is not weakened by extension, nor our vigor impaired by division. The riches of soil, timber and minerals, are so diffused as to be everywhere abundant; and the communication between distant points is so easy, as to render the whole available. The products of the industry of millions, may be here interchanged with unparalleled ease and rapidity; and when our broad lands shall be settled, there will be a community of interest, and an intimacy of intercourse, between myriads of men, such as were never before brought under the operation of a common system of social and civil ties."

A passage, descriptive of the upper portions of the Ohio river, will give the reader an idea of the graphic manner in which our author portrays natural scenery.

"The river Ohio, for some distance below Pittsburg, is rapid, and the navigation interrupted in low water by chains of rocks, extending across the bed of the river. The scenery is eminently beautiful, though deficient in grandeur, and exhibiting great sameness. The hills, two or three hundred feet in height, approach the river and confine it closely on either side. Their tops have usually a rounded and graceful form, and are covered with the verdure of an almost unbroken forest. Sometimes the forest trees are so thinly scattered as to afford glimpses of the soil, with here and there a mass, or a perpendicular precipice of grey sandstone, or compact limestone, the prevailing rocks of this region. The hills are usually covered on all sides with a soil, which, though not deep, is rich. Approaching towards Cincinnati, the scenery becomes more monotonous. The hills recede from the river, and are less elevated. The bottom lands begin to spread out from the margin of the water. Heavy forests cover the banks and limit the prospect: but the woodland is arrayed in a splendor of beauty, which renders it the chief object of attraction. Nothing can be more beautiful than the first appearance of the vegetation in the spring, when the woods are seen rapidly discarding the dark and dusky habil-

ments of winter, and assuming their vernal robes. The gum tree is clad in the richest green; the dogwood and red-bud are laden with flowers of the purest white and deepest scarlet; the buckeye bends under the weight of its exuberant blossoms. The oak, the elm, the walnut, the sycamore, the beech, the hickory, and the maple, which here tower to a great height, have yielded to the sunbeams, and display their burning buds and expanding flowers. The tulip tree waves its long branches and its yellow flowers high in the air. The wild rose, the sweet-briar, and the vine, are shooting into verdure; and, clinging to their sturdy neighbors, modestly prefer their claims to admiration, while they afford delightful promise of fruit and fragrance."

In depicting the surface of the country, we find the following general remarks:

"The traveller who visits our valley for the first time, advancing from the east to the Ohio river, and thence proceeding westward, is struck with the magnificence of the vegetation, which clothes the whole surface. The vast and gloomy grandeur of the forest; the gigantic size and venerable antiquity of the trees; the rankness of the weeds; the luxuriance and variety of the underbrush; the long vines that climb to the tops of the tallest branches; the parasites that hang in clusters from the boughs; the brilliancy of the foliage, and the exuberance of the fruit, all show a land teeming with vegetable life. The forest is seen in its majesty; the pomp and pride of the wilderness is here. Here is nature unspoiled, and silence undisturbed. A few years ago, this impression was more striking than at present; for now farms, villages, and even a few large towns are scattered over this region, diversifying its landscape, and breaking in upon the characteristic wildness of its scenery. Still there are wide tracts remaining in a state of nature, and displaying all the savage luxuriance which first attracted the pioneer; and upon a general survey, its features present, at this day, to one accustomed only to thickly populated countries, the same freshness of beauty, and the same immensity, though rudeness of outline, which we have always been accustomed to associate with the idea of a western landscape. I know of nothing more splendid than a forest of the west, standing in its original integrity, adorned with the exuberant beauties of a powerful vegetation, and crowned with the honors of a venerable age. There is a grandeur in the immense size of the great trees—a richness of coloring in the foliage, superior to any thing that is known in corresponding latitudes—a wildness, and an unbroken stillness that attest the absence of man—above all, there is a vastness, a boundless extent, an uninterrupted continuity of shade, which prevents the attention from being distracted, and allows the mind to fill itself, and the imagination to realize the actual presence, and true character, of that which had burst upon it, like a vivid dream."

The fifth, sixth, seventh, eighth chapters treat of the prairies of the west, which certainly present one of the most striking features in the formation and aspect of the country. The author goes somewhat at large into the theory of the prairies, examining the suppositions of various writers upon the subject, and advancing his own upon their formation. Without entering upon this mooted question, we may quote the latter.

"The prairies afford a subject of curious inquiry to every traveller who visits these regions. Their appearance is novel and imposing; and he who beholds it for the first time experiences a sensation similar to that which fills the imagination at the first sight of the ocean. The wide and unlimited prospect, calls up perceptions of the sublime and beautiful; its peculiarity awakens a train of inquisitive thought. Upon the mind of an American especially, accustomed to see new land clothed with timber, and to associate the idea of a silent and tangled forest, with that of a wilderness, the appearance of sunny plains, and a diversified landscape, untenanted by man, and unimproved by art, is singular and striking. Perhaps, if our imagination were divested of the impressions created by memory, the subject would present less difficulty; and if we could reason abstractly, it might be as easy to account for the origin of a prairie as for that of a forest."

"It is natural to suppose that the first covering of the earth would be composed of such plants as arrive at maturity in the shortest time. Annual plants would ripen and scatter their seeds, many times, before trees and shrubs would acquire the power of reproducing their own species. In the meantime, the propagation of the latter would be liable to be retarded by a variety of accidents—the frost would nip their tender stems in the winter—fire would consume, or the blast shatter them—and the wild grazing animals would bite them off, or tread them under foot; while many of their seeds, particularly such as assume the form of nuts or fruit, would be devoured by animals. The grasses, which are propagated both by the root and by seed, are exempt from the operation of almost all these casualties. Providence has, with unerring wisdom, fitted every production of nature to sustain itself against the accidents to which it is most exposed, and has given to those plants which constitute the food of animals a remarkable tenacity of life; so that although bitten off and trodden, and even burned, they still retain the vital principle. That trees have a similar power of self protection, if we may so express it, is evident from their present existence in a state of nature. We only assume, that in the earliest stage of being, the grasses would have the advantage over plants less hardy and of slower growth; and that when both are struggling together for the possession of the soil, the former would at first gain the ascendancy; although the latter, in consequence of their superior size and strength, would finally, if they should ever get possession of any portion of the soil, entirely overshadow and destroy their humble rivals."

The grasses, as our author supposes, having originally the ascendancy over the trees, would maintain it, by the fires which annually sweep over them destroying all the young timber within their range. The fact that along the small streams which run through the prairies, trees are found, is explained on the supposition that the herbage in such places remains green until late in the fall, and the soil being wet, the fire is prevented from taking effect. Thus the shrubs and young trees would escape from year to year, and finally the margins of the streams would become fringed with thickets of trees that would eventually destroy the grass, and thus grow up into forests.

Those of our readers who have never seen a prairie, will be pleased with the following description, while such as have revelled amid their thick grass and brilliant flowers, will be struck with the faithfulness of the picture here given.

"The scenery of the prairie country excites a different feeling. The novelty is striking, and never fails to cause an exclamation of surprise. The extent of the prospect is exhilarating. The outline of the landscape is sloping and graceful. The verdure and the flowers are beautiful: and the absence of shade, and consequent appearance of a profusion of light, produces a gallery which animates the beholder. It is necessary to explain that these plains, although preserving a general level in respect to the whole country, are yet in themselves not flat, but exhibit a gracefully waving surface, swelling and sinking with an easy slope, and a full, rounded outline, equally avoiding the unmeaning horizontal surface, and the interruption of abrupt or angular elevations. It is that surface, which in the expressive language of the country, is called *rolling*, and which has been said to resemble the long heavy swell of the ocean, when its waves are subsiding to rest after the agitation of a storm. It is to be remarked also, that the prairie is almost always elevated in the centre, so that in advancing into it from either side, you see before you only the plain, with its curved outline marked upon the sky, and forming the horizon; but on reaching the highest point, you look around upon the whole of the vast scene. The attraction of the prairie consists in its extent, its carpet of verdure and flowers, its undulating surface, its groves, and the fringe of timber by which it is surrounded. Of all these, the latter is the most expressive feature—it is that which gives character to the landscape, which imparts the shape, and marks the boundary of the plain. If the prairie be small, its greatest

beauty consists in the vicinity of the surrounding margin of woodland, which resembles the shore of a lake, indented with deep vistas, like bays and inlets, and throwing out long points, like capes and headlands; while occasionally these points approach so close on either hand, that the traveller passes through a narrow avenue or strait, where the shadows of the woodland fall upon his path, and then again emerges into another prairie. When the plain is large, the forest outline is seen in the far perspective, like the dim shore when beheld at a distance from the ocean. The eye sometimes roams over the green meadow, without discovering a tree, a shrub, or any object in the immense expanse, but the wilderness of grass and flowers; while, at another time, the prospect is enlivened by groves, which are seen interspersed like islands, or the solitary tree, which stands alone in the blooming desert. If it be in the spring of the year, and the young grass has just covered the ground with a carpet of delicate green, and especially if the sun is rising from behind a distant swell of the plain, and glittering upon the dew-drops, no scene can be more lovely to the eye. The deer is seen grazing quietly upon the plain; the bee is on the wing; the wolf, with his tail dropped, is sneaking away to his covert with the felon tread of one who is conscious that he has disturbed the peace of nature; and the grouse, feeding in flocks, or in pairs, like the domestic fowl, cover the whole surface—the males strutting and erecting their plumage, like the peacock, and uttering a long, loud, mournful note, something like the cooing of the dove, but resembling still more the sound produced by passing a rough finger boldly over the surface of a tambourine.

"When the eye roves off from the green plain, to the groves or points of timber, these also, are found to be at this season, robed in the most attractive hues. The rich undergrowth is in full bloom. The red-bud, the dogwood, the crab-apple, the wild plum, the cherry, the wild rose, are abundant in all the rich lands; and the grape vine, though its blossom is unseen, fills the air with fragrance. The variety of the wild fruit, and flowering shrubs, is so great, and such the profusion of the blossoms with which they are bowed down, that the eye is regaled almost to satiety. The gaiety of the prairie, its embellishments, and the absence of the gloom and savage wildness of the forest, all contribute to dispel the feeling of loneliness, which usually creeps over the mind of the solitary traveller in the wilderness. Though he may not see a house, nor a human being, and is conscious that he is far from the habitations of men, he can scarcely divest himself of the idea that he is travelling through scenes embellished by the hand of art. The flowers so fragile, so delicate, and so ornamental, seem to have been tastefully disposed to adorn the scene. The groves and clumps of trees appear to have been scattered over the lawn to beautify the landscape; and it is not easy to avoid the illusion of the fancy, which persuades the beholder that such scenery has been created to gratify the refined taste of civilised man. Europeans are often reminded of the resemblance of this scenery to that of the extensive parks of noblemen, which they have been accustomed to admire, in the old world; the lawn, the avenue, the grove, the copse, which are there produced by art, are here prepared by nature; a splendid specimen of massy architecture, and the distant view of villages, are alone wanting to render the similitude complete.

"In the summer, the prairie is covered with long, coarse grass, which soon assumes a golden hue, and waves in the wind like a ripe harvest. Those who have not a personal knowledge of the subject, would be deceived by the accounts which are published of the height of the grass. It is seldom so tall as travellers have represented, nor does it attain its highest growth in the richest soil. In the low wet prairies, where the substratum of clay lies near the surface, the centre or main stem of this grass, which bears the seed, acquires great thickness, and shoots up to the height of eight or nine feet, throwing out a few long, coarse leaves or blades; and the traveller often finds it higher than his head as he rides through it on horseback. The plants, although numerous and standing close together, appear to grow singly and unconnected, the whole force of the vegetative power expanding itself upwards. But in the rich undulating prairies, the grass is finer, with less of stalk, and a greater profusion of leaves. The roots spread and interweave so as to form a compact, even nod, and the blades expand into a close thick sward, which is seldom more than eighteen inches high, and often less, until late in the season,

when the seed-bearing stem shoots up. The first coat of grass is mingled with small flowers; the violet, the bloom of the strawberry, and others of the most minute and delicate texture. As the grass increases in size, these disappear, and others, taller and more gaudy, display their brilliant colors upon the green surface; and still later, a larger and coarser succession rises with the rising tide of verdure. A fanciful writer asserts that the prevalent color of the prairie flowers, is in the spring, a bluish purple; in midsummer red; and in the autumn yellow. This is one of the notions that people get, who study nature by the fireside. The truth is, that the whole of the surface of these beautiful plains, is clad throughout the season of verdure, with every imaginable variety of color, from 'grave to gay.' It is impossible to conceive a more infinite diversity, or a richer profusion of hues, or to detect any predominating tint, except the green, which forms the beautiful ground, and relieves the exquisite brilliancy of all the others. The only changes of color, observed at the different seasons, arise from the circumstance, that in the spring the flowers are small, and the colors delicate; as the heat becomes more ardent, a harder race appears, the flowers attain a greater size, and the hue deepens; and still later a succession of coarser plants rises above the tall grass, throwing out larger and gaudier flowers. As the season advances from spring to midsummer, the individual flower becomes less beautiful when closely inspected, but the landscape is far more variegated, rich and glowing.

"In winter, the prairies present a gloomy and desolate scene. The fire has passed over them, and consumed every vegetable substance, leaving the soil bare, and the surface perfectly black. That gracefully waving outline, which was so attractive to the eye when clad in green, is now disrobed of all its ornaments. Its fragrance, its notes of joy, and the graces of its landscape have all vanished, and the bosom of the cold earth, scorched and discolored, is alone visible. The wind sighs mournfully over the black plain; but there is no object to be moved by its influence—not a tree to wave its long arms in the blast, nor a reed to bend its fragile stem—not a leaf, nor even a blade of grass to tremble in the breeze. There is nothing to be seen but the cold dead earth and the bare mound, which move not—and the traveller, with a singular sensation, almost of awe, feels the blast rushing over him, while not an object visible to the eye, is seen to stir. Accustomed as the mind is to associate with the action of the wind its operation upon surrounding objects, and to see nature bowing and trembling, and the fragments of matter mounting upon the wind, as the storm passes, there is a novel effect produced on the mind of one who feels the current of air rolling heavily over him, while nothing moves around."

The author examines in detail, the soil, water and timber of the prairies, and the question how far the want of the latter is likely to interfere with the agricultural occupancy of these treeless plains. The chapters upon the wild and domestic animals, the birds, reptiles, agricultural products, fruits and vegetables, possess much valuable information, and present many facts well calculated to invite immigration to that region. One of the longest and most elaborated chapters in the book, is that which treats of the public domain, by which is meant the lands belonging to the general government. This subject is embraced under these two heads—the title of the United States to the public lands, and the policy pursued in disposing of them. The intelligent reader must be already familiar with all that relates to the history of the former. The proper disposition of these lands is a matter of much importance, and for several years past has occupied the attention of Congress, where it has caused much angry debate, and elicited many conflicting opinions. Judge Hall favors the plan of Colonel Benton, to graduate the price of the public lands, by offering them periodically at reduced prices—the highest being one dollar and twenty-five cents per acre—and the lowest twenty-five cents; but he does not favor the proposition to cede to the states, respectively, the lands lying within their

boundaries, nor to divide the proceeds of the sales of these lands among the state governments.

The twelfth chapter, which treats of western steamboats, presents, perhaps, as forcible an illustration of the wonderful growth of the west, as any other in the book. In 1794, four keel boats, carrying twenty tons each, were sufficient for the trade between Pittsburg and Cincinnati. These had an armed force on board to defend them, and were pushed up the stream by poles. Down to the year 1817, nearly all the business on the western waters, was carried on in keel boats and barges. At that period "about twenty of the latter, averaging one hundred tons each, comprised the whole commercial facilities for transporting merchandize from New Orleans to the 'upper country;' each of these performed one trip down and up again to Louisville and Cincinnati within the year. The number of keel boats employed on the upper Ohio cannot be ascertained, but it is presumed, that a hundred and fifty, is a sufficiently large calculation to embrace the whole number. These averaged thirty tons each, and employed one month to make the voyage from Louisville to Pittsburg, while the more dignified barge of the Mississippi made her trip in the space of one hundred days, if no extraordinary accident happened to check her progress."

There are now, 1838, not less than four hundred steamboats navigating the western waters! Comment is unnecessary. The mind is lost in astonishment at the wonderful revolution that has taken place in twenty years, throughout the valley of the Mississippi. The thirteenth and last chapter of the work, relates to the trade and commerce of the west, embracing the exports and imports for a series of years—a list of the banks in Ohio, Kentucky, Indiana and Illinois—some statistics of the Miami canal, and a list of the steamboats navigating the Louisville and Portland canal during the year 1837, amounting to four hundred and twelve, and passing in the aggregate, during that year, fifteen hundred times through the same; another fact illustrative of the vast resources and business of the west.

The length of our extracts from this interesting and valuable book, leave us no room for further notices of it. Although not in point of literary merit equal to some other of the author's works, it is written with sufficient accuracy and care for a series of popular sketches of the region which it describes. It bears its own evidence of coming from the same pen which conducted the Illinois Magazine, and wrote the "Legends of the West," "Harper's Head," and "The Border Tales;" all of which have been widely circulated in the United States, and have placed the author among the most spirited and popular writers of the day. It would seem, by the bye, that Judge Hall is most indefatigable with his pen. He has been for some time, and still is, engaged, in conjunction with Col. McKenney, in writing the biographical sketches, which accompany that splendid gallery of Indian portraits, now in progress of publication in Philadelphia; and yet, in the midst of all his literary labors, he is performing the duties of cashier of one of the principal banking institutions of Cincinnati. It would appear, indeed, as if the men of letters in the United States, were resolved upon convincing the world that literature and the every-day business of life are not antagonist professions. Paulding is at the head of the Navy—Bryant is engaged in

that most unpoetical of all human pursuits, the editing of a violent politico-partizan newspaper—Halleck is still in the "sugar and the cotton line," footing up accounts for John Jacob Astor—Kennedy is making out briefs, and looking after the President's sub-treasury bill in Congress—Fay is playing Secretary of Legation at the Court of St. James—and Hall is signing bank notes and drawing bills of exchange in Cincinnati. Verily, the time cometh, and now is, when the foolish popular prejudices, which has obtained some currency in this country, that the cultivation of a literary taste, unfits a man for the forum, the desk, or the counting-room, must be added to the "receptacle of things lost upon earth."

BIOGRAPHICAL SKETCHES

OF LIVING AMERICAN POETS AND NOVELISTS.

No. V.

GEORGE P. MORRIS, ESQ.

It is the lot of the American poet to be cradled in the lap of the sublimest scenery on the globe. From infancy to manhood, his path is beside illimitable lakes and majestic rivers, whose shores are granite mountains, and he hunts his game along hillsides whose summits are resting places for the thunder-cloud. If all that is grand and magnificent, or soft and beautiful in nature, has power to expand the human heart, enlarge the intellect, strengthen the imagination, refine and spiritualize the fancy, and fire the whole man with the loftiest and purest poetical images—if the contemplation of the poetry of the universe, will make poetry to spring up in the heart, then should America be the Eden of poetry, and her poets princes in the empire of song.

But from the study of *natural scenery* alone, the poet cannot derive inspiration; it were the contemplation of the statue of Prometheus before animated with celestial fire—the arch of the rainbow without its colors. There must be perched on the ragged pinnacle, hovering on the mountain's brow, suspended from every crag, and dwelling in glen and fountain, the magical charm of past-time associations, around which the memory can linger—there must be a *genius loci* every where present, for natural scenery, however grand and picturesque in itself, to produce its natural and legitimate poetical effect on the mind.

This *genius of the place* is wanting to American scenery: the blood-stirring border song; the wild traditionary legend of love and chivalry; the wondrous tale of superstition and fairy, and the thousand romantic associations, that hover like ghosts from the spiritual land of minstrelsy, about the vallies and mountains of the old world, inspiring his tuneful sons, are wanting as auxiliaries to the American muse: without these, the wand of poetry

is nearly powerless; its harp tuneless; its spirit tame; its wing unfitted to sustain either a long or bold flight into the regions of the imagination: without these, poetry, like too much of our native poetry, becomes, of necessity, a mere assemblage of agreeable words and pleasant sounds; a wilderness of beautiful verbiage; piles of fern and flowers destitute of fragrance—the mere abstract only of all that is beautiful in nature, wherewith the imagination is pleased, without being improved, while the heart remains untouched.

It is from a consciousness of this deficiency of historical and traditionary interest, that some of our best poets have imitated or assumed the English and Italian school, not only in the direction and application of their powers, but also, (which herein need not have been) in their natural images. How often and familiarly are the nightingale, the field daisy, the sky lark, the harvest moon, the turtle dove, with castle, knight, and troubadour, drawn into the service of what is meant to be legitimate American verse, when they are exclusively foreign figures and subjects; and how frequently is the "olden ballad" the prideful theme of our native poets!

If America is ever to rank high as a land of poetry, (which from an inspection of its elements we do not believe it ever will do,) and should cultivate the native muse, pruned from foreign shoots and grafts, it is in moral and didactic, rustic and lyric poetry, she will found her claims to distinction. The lofty epic, and the legitimate ballad, have no place in her native muse: the former is now found only in the pages of the historical novelist; the latter being, *genuinely*, a metrical relation of some ancient tradition, can have no place in a land yet too young for gray tradition and hoary legend. In the progress of these sketches, we shall enter more fully into this subject; at present, lyrical poetry, the last of the four just named, alone comes under our consideration in this paper.

To lyric poets, and lyric poetry, America is mainly indebted for much of her existing fame. We have neither space nor leisure, here to support by the facts that are by us, this bold assertion; but any one who will impartially review the history of our imaginative literature for the last half century, will find the proofs numerous and satisfactory. Since Moore's elegant and graceful muse has elevated modern lyrics to a dignity in literature, they had not enjoyed from the days of the troubadours, poets, tuning their lyre to song, have sprung up on both sides of the Atlantic. One among the few in the United States, whose verses are household words, and whose numbers have become a part of the language, is the gentleman whose name we have placed at the head of this sketch.

Col. Morris has long been connected with American literature, as editor of the New York

Mirror, and a frequent contributor not only to its columns, but also to the pages of cotemporary magazines. So early as his seventeenth year, he wrote several fragmentary pieces, which he published anonymously, and which attracted, at the time, much attention. One of the earliest of these juvenile productions, and the only one that he has preserved, in a volume of poems recently published, is called, "The Miniature." This we shall copy, when we come to notice the book in question. In 1822, his name first became known to the public through the Mirror, which, this year he commenced, under circumstances, every way discouraging to the success of this species of literary property. At this period, beside one or two reviews, there was not a periodical in the United States devoted to light literature. The "Port Folio," the "Athenæum," the "Olio" of the day, whose pages were loaded with heavy political and philosophical essays, and devoted to the discussion of puzzling queries in science, and the dismemberment of metaphysical subtleties, whose poetical department shone with elegies, ditties, sonnets, and acrostics, and whose "amusing head," delighted readers with riddles, conundrums, aphorisms, and stale anecdotes of the court of Charles II—periodicals to which we cannot now turn without a smile—had had their day, and were forgotten. They were followed by other ephemera, which likewise lived their day—and died. When the New York Mirror was established, periodical literature in the United States was such only in name. To Col. Morris is due the honor of being the pioneer in almost every thing relating to this species of literature. He was the first to foster and encourage American genius, and to him we believe, we are indebted for several of our younger literary men, who in all probability would never have written, or, at least, would have laid down their pens, but for this vehicle for their fugitive compositions, and for the kind encouragement offered them by its editor. One of these instances is Theodore Fay, Esq., who, in his dedication of the "Dreams and Reveries of a Quiet Man," which is addressed to the subject of this biography, says, "I can never forget, that but for your encouragement and liberality, these light sketches never would have been written. Many indeed, worthier than I, have experienced the benefit of your unwavering exertions to employ talent already established, and to infuse confidence into the timid and inexperienced."

At the time the New York Mirror was established, there were not ten men in the United States who lived by their pens. At the time we write, their name is "legion." At that period Samuel Woodworth, Esq. then more popularly known as the author of the "Champions of Freedom," was the American poet. In a recently printed book, entitled "Specimens of American Poetry," before

me, the author records more than one hundred names, against which he has written *American poet!* Posterity may draw on this capital only a very small dividend perhaps, but still they all belong to the present day, and their names are familiar to every one at all conversant with light literature. How far the establishment of the New York Mirror, has gone toward producing this result, it is difficult to say, but that it has contributed very materially to this increase in the ranks of literature, will not be denied even by the most cavilling. It is not our purpose to go into a history of the establishment of the Mirror: we have alluded to it as a work that has done much for the poetical literature of the country, and which for ten years was under the sole editorial direction of Col. Morris. Recently he has resigned its editorship, successively to John Inman, Charles F. Hoffman and Epes Sargent, Esq's, contenting himself with remaining an occasional contributor to its columns. The last of the above named gentlemen, now fills the editorial chair, and the later numbers of this valuable periodical, show, that although so long identified with the name of Col. Morris, (whose good sense and modesty, will not be offended with what follows,) it possesses the seeds of perpetuity *without* it.

In 1827, Col. Morris, wrote a drama, in five acts, founded on events of the revolutionary war, called "Brier Cliff." This piece was a great favorite with the public, and at the Chatham Theatre, then a playhouse, of no mean celebrity, it was produced under the direction of Mr. Wallack, and had a run of about forty nights. At one time during its triumphant career, it was performed on one and the same night, at four theatres in New York, namely, the Park, the Bowery, the Lafayette, and the Chatham theatres; a thing unprecedented in the theatrical annals of this country. The piece was attributed to Noah, Halleck, Woodworth, and the other popular dramatic writers and poets, of that time; and more than one aspiring gentleman "who would win fame, without work or wit," confident in the preservation of the author's incognito, came forward, and boldly claimed the authorship. It is with pleasure, therefore, that we are able to state that Col. Morris, is the sole, and unassisted author, of "Brier Cliff:"—for on one occasion we remember his saying to some friends at table, who rallied him on the subject, "Gentlemen, that play is entirely my own; I am not indebted to any one for a single line or comma, if I except Mrs. Caroline Matilda Thayer,* on whose story it is founded. If it belongs to any one else, however, I wish he would come forward, prove property, pay charges, and take it away."

Besides "Brier Cliff," which has never been

* One of the earliest contributors to the New York Mirror, and now, and for some years past, principal of a female seminary in Clinton, Mississippi.

published, Col. Morris has written much and successfully for the stage, in the shape of odes, addresses, epilogues, &c. During the visit of Lafayette to this country, he composed a popular ode, which was sung eighteen nights successively at the theatres in New York, by all the company in appropriate costume. There is an *on dit*, that general Lafayette was so delighted with the lines, that he himself was in the habit of humming them whenever occasion offered. In the composition of songs adapted to popular airs, Col. Morris has shown himself exceedingly happy. He wrote songs and addresses, from time to time, for Mrs. Entwistle, Kean, and other well known performers, all of which possessed an enviable popularity and are embodied with the musical literature of the day. Of these we shall speak when we come to notice the volume of poems he has recently published.

As a prose writer, he has repeatedly distinguished himself, holding a flowing, graceful and humorous pen. His "Sketches from the Springs," in "The Atlantic Club Book," of which also he was editor, are in a vein of admirable humor. We give an extract to illustrate the style to which we allude.

THE LITTLE FRENCHMAN.

Ah, ha! my little Frenchman! That fellow is a character. I will tell you a story about him. I stopped at West Point, not long since, and found the hotel crowded with visitors. It was late in the evening when I arrived, and being almost worn out with the fatigue of the journey—for I had been the inmate of stages, rail road cars and canal boats, without closing my eyes for the last two days—I repaired with all convenient haste, to the solitary couch that had been assigned me in the basement story, in the hope of passing a few comfortable hours in "the arms of Morpheus." But one glance at the "blue chamber," convinced me of the utter folly of any such expectations. I found it nearly crammed with my fellow lodgers, who, if I might judge from the melancholy display of hats, boots, socks, and other articles of wearing apparel, scattered over the floor in most "admirable disorder," had evidently retired with unbecoming eagerness to secure their places to themselves, and thereby guard them against the possibility of intrusion from others, doubtless believing, that in this, as well as similar cases, possession is nine-tenths of the law. As the apartment was very confined, and all the inhabitants wide awake, I thought I might as well spend an hour or two in the open air, before going to bed, and was about to retire for that purpose, when a voice called, "If you do not wish to lose your berth, you had better turn in." Observing that nearly all the cots, sofas, settees, chairs, &c., were occupied, and hearing that several of my fellow passengers were sleeping

on the housetop, and in the halls, I deemed it prudent to follow the advice just given to me, so at once commenced disrobing, and was soon stowed away in a snug corner, and it was not long before I found myself gradually and imperceptibly sinking under the power of the gentle god. I began to congratulate myself—to commiserate the unhappy condition of my less fortunate companions, and to bid good night to all my cares, when that short, thin, merry little Frenchman, came dancing into the room, and after cutting a pigeon wing or two, humming a passage from a popular opera, and skipping once or twice around the vacant beds, sat himself upon the most commodious, with the exclamation, "Ah, ha! I find him—this is him—number ten,—magnifique! Now I shall get some little sleeps at last." Again humming part of a tune, he proceeded to prepare himself for bed. After divesting himself of his apparel, and carefully depositing his trinkets and watch under his pillow, he fastened a red bandanna handkerchief around his head, and slid beneath the counterpane, as gay and lively as a cricket. "It is superb," he once more exclaimed aloud. "I have not had some rest for six dozen days, certainment—and now I shall have some little sleeps. But, waiter!" bawled he, suddenly recollecting himself. John came at the call. "What is it o'clock, eh?"

"Nearly ten, sir."

"What time de boat arrive?"

"About two."

"When he do come, you shall wake me some little minute before?"

"Yes, sir."

"And you shall get some de champaign and oysters all ready for my suppare?"

"Very well, sir; you may depend upon me, sir," said John, as he shut the door, and made his exit.

"Ah! très bien, now for de little sleeps." Uttering which, he threw himself upon the pillow, and in a few seconds was in a delightful doze.

The foregoing manoeuvres and conversation had attracted the attention of all, and aroused me completely.

"D——n that Frenchman," growled a bluff old fellow next him, as he turned on the other side, and went to sleep. Most of the other gentlemen, however, raised their heads for a moment, to see what was going on, and then deposited them as before, in silent resignation. But one individual, with more nerves than fortitude, bounced out of bed, swore there was no such thing as sleeping there, dressed himself in a passion, and went out of the room in a huff. This exploit had an electric effect on the melancholy spectators; and a general laugh, which awoke all the basement, was the result. For some minutes afterward, the merriment was truly appalling. Jokes, mingled with execrations, were heard in every direction, and the uproar soon became universal. Silence,

however, was at length restored; but all symptoms of repose had vanished with the delusion that gave them birth. The poor Frenchman, however, whose slumbers had been sadly broken by the nervous man, had actually gone to sleep once more! He began to breathe hard, and, finally, to snore—and *such a snore!*—it was enough to have awakened the dead! There was no such thing as standing *that*. The equanimity of his immediate neighbor—a drowsy fellow, who, on first lying down, said he “was resolved to sleep in spite of thunder,” was the first to give way. He sprang bolt upright, hastily clapped both hands over his ears, and called out at the top of his compass, for the Frenchman to discontinue “that diabolical and dreadful sound.” Up jumped the red night-cap, rubbing its eyes in mute astonishment. After hearing the heavy charge against it, with “a countenance more in sorrow than in anger,” and making every apology in its power for the unintentional outrage it had committed, down it sunk once more upon the pillow, and glided away into the land of Nod. But new annoyances awaited my poor Frenchman; for scarcely had this event happened, when the door was flung open and in came a gentleman from Cahawba, with a fierce-looking broad brimmed hat upon his pericranium, that attracted general attention, and struck awe and consternation to the hearts of all beholders. He straddled himself into the middle of the floor, thrust both hands into his breeches pockets, pressed his lips firmly together, and cast his eyes deliberately around the apartment, with the expression of one who intended to insist upon his rights. “Which is number ten?” he demanded, in a tone which startled all the tenants of the basement story. “Ah! I perceive,” continued he, approaching the Frenchman, and laying violent hands upon him. “There’s some mistake here. A man in my bed, hey? Well, let us see what he is made of. Look here, stranger, you’re in the wrong box! You’ve tumbled into my bed—so you must shift your quarters.” Who shall depict the Frenchman’s countenance, as he slowly raised his head, half-opened his drooping organs of vision, and took an oblique squint at the gentleman from Cahawba! “You are in the wrong bed,” repeated he of the hat—“number ten is my property; yonder is your’s; so have the politeness just to hop out.” The Frenchman resigned himself to his fate, and gathering his limbs together, transported his lengthy person to the vacant bed, without the slightest resistance, and in eloquent silence. It was very evident to him, as well as the rest of us, that there was no withstanding the persuasions of his new acquaintance, who had a fist like a mallet, and who swore that he always carried loaded pistols in his pocket, to be ready for any emergency. The inhabitants of the basement, would have screamed outright this time, but for prudential

considerations; for the gentleman from Cahawba, realized the description of the “determined dog,” mentioned in the comedy, who “lived next door to a churchyard, killed a man a day and buried his own dead.” Was this then a man to be trifled with? Certainly not. Better to cram the sheets down your throat, and run the risk of suffocation from suppressed laughter, than to encounter the displeasure of a person who wears such a hat. They are always to be avoided.

But to return to the Frenchman. He was no sooner in his resting-place, than John came to inform him that his champagne and oysters were ready. Like one in a dream, he arose, sat upon the side of the bed, and slowly dressed himself, without a single murmur at his great disappointment. He had hardly finished, when the steamboat bell sounded among the highlands, and he received the gratifying intelligence that in consequence of the time he had lost in dressing, he had none left to eat his supper—and that if he did not hurry, he would be too late for the boat! At this he arose—yawned—stretched his person out at full length, and with the ejaculation—“I shall get some little sleeps, nevere”—bid us good night and slowly took his leave.

The prose writings of Col. Morris, if collected, would make several volumes, and we trust that, for the entertainment of the public and in justice to his own reputation, all unambitious of authorship as he may be, he will, at no distant day publish them in this shape. The tale entitled the “Monopoly and the People’s Line,” and the racy *jeu d’esprit* called “The Little Frenchman and his Water-Lots,” are two of the prose sketches from his pen, which are fresh in the memory of every reader. There is nothing superior for wit and humor, to these two tales, in the works of any American writer. Their universal acceptance by the press on both sides of the water, speak decidedly in favor of their intrinsic merit.

Our author’s miscellaneous literary history, must be one of intense interest, associated as he has been, by his station, for so long a period, as editor of a leading literary periodical, with most of the literary men of this country, and also many of those of England, who have, from time to time, visited America, all of whom have frequently borne testimony to his genius and worth. For the drama and its professors, for literature and those who pursue it, he has doubtless done as much as any other American living; and we see that Mr. Dunlap in his “History of the Arts and Artists,” has bestowed on him unqualified commendation for what he has done for the fine arts. These facts we can only allude to in passing, it being our object throughout the remainder of this article, to view Col. Morris alone as a poet.

“*The Deserted Bride, and other Poems*,” is an elegant thin octave volume put forth by our author

early the present year; and though his name has long been familiar, his songs sung from Louisiana to farther Maine, it is the first time he has come bodily before the public, in a "bounden booke." In putting this book together, he appears to have been governed more by the quality than the quantity of his pieces. His numerous poetical effusions written within the last sixteen years, doubtless would have made six such volumes as the present. Many of these fugitive pieces are beautiful, and we regret that his fastidiousness of taste should have led him to deny a place among them, to several popular songs that bear the stamp of the genuine spirit of minstrelsy, and which should have been preserved as valuable additions to this volume. We observe that nearly all that he has seen fit to sanction in the book before us, have been stamped by the public approbation.

The volume contains only thirty poems; but as the poet has seen fit to found his claims, as such, altogether on these, we shall not go out of the way to look after any thing he has rejected, whatever might be its merit, but from what he has given us under his name, alone decide upon his claims to poetic rank. Although the "Deserted Bride" holds the first place in the volume, it is surpassed by four or five other pieces, in the lyrical grace and delicacy of sentiment (though not in harmony of numbers,) that are the marked features of our poet's productions. The exquisite passage in Sheridan Knowles' "Hunchback," where Julia (whose coquetish indiscretion has caused her betrothed husband Sir Thomas Clifford, to desert her,) soliloquises on his conduct, suggests the poem.

"Love me?

He never lov'd me! If he had, he ne'er
Had given me up! Love's not a spider's web
But fit to mesh a fly—that you can break
By only blowing on't! He never lov'd me!
He knows not what love is—or if he does,
He has not been o'er chary of his peace;
And that he'll find when I'm another's wife.
Lost!—lost to him forever! Tears again!
———what have I to do with tears?"

Knowles.

The poem founded on this passage is too long for transcription, nor, compared with many other pieces in the volume, does it merit it. If precedence were regulated by intrinsic worth, the "Indian Poem" should have taken the lead. There are herein, nevertheless, some fine lines, and one or two entire stanzas of great beauty. We extract two verses, which are characteristic of the musical cadence that gives a peculiar charm to almost every thing from the pen of this poet.

"Wrecked and wretched, lost and lonely,
Crush'd by grief's oppressive weight,
With a prayer for Clifford only,
I resign me to my fate.
Chains that bind the soul I've proven
Strong as they were iron-woven.

"Deep the wo that fast is sending
From my cheek its healthful bloom;
Sad my thoughts as willows bending
O'er the borders of the tomb.
Without Clifford not a blessing
In the world is worth possessing."

We quote one more stanza, which has just struck us with the harmony of its numbers, the womanly and spirited tone that he has given to every line.

"Titles, lands, and broad dominion,
With himself to me he gave;
Stoop'd to earth his spirit's pinion,
And became my willing slave!
Knelt and pray'd until he won me—
Looks he coldly now upon me?"

The second article, is a short poem entitled "WOMAN." It is a just, manly and deserved compliment to the sex. What a touching and beautiful thought is that when the heart turns back to departed mother or sister, and finds both to live again in the wife!

"But when I look upon my wife,
My heart-blood gives a sudden rush,
And all my fond affections blend
In mother—sisters—wife and friend!"

There are some common-place expressions in the poem, but a liquid ease gives a polish even to the tritest phrases. The concluding stanzas redeem it, however, from mediocrity or tameness:

"Were I the monarch of the earth,
Or master of the swelling sea,
I would not estimate their worth,
Dear woman! half the price of thee!"

Our poet has the graceful talent necessary to the success of all lyric writers, of expressing the commonest and most familiar thoughts, in a way that shall make them touch the heart, and hang long afterward about the memory. His lines are always poetical, though exceedingly simple in their construction, and are almost always either playful or touching, and aimed at the feelings rather than the fancy. It is talents like these that constitute the lyric poet. His pen is in poetry what the harp is in music,—gentle and soothing, light and graceful, shedding a twilight over the soul, rather than dazzling it with the splendor of sunlight.

"LINES, AFTER THE MANNER OF THE OLDEN-TIME," is the third article in the volume. It is an exquisite poem throughout. In justice to the poet it should either be copied here entire, or left un mutilated. We will, nevertheless, that some further idea may be formed of the style, quote a few passages. The thoughts and often the language, are of the olden time: if the antiquated orthography were also assumed, the illusion would be successful, and one might believe he was perusing a "newly-discovered manuscript poem" of Chaucer or Spenser:

"Love vibrates in the wind-harp's tune,
With fays and fairies lingers he—
Gleams in the ring of th' watery moon,
Or treads the pebbles of the sea:
Love enters 'court and camp and grove';
Oh, every where we meet thee, Love!

"And every where he welcome finds,
To cottage-door, or palace-porch—
Love enters free as spicy winds,
With purple wings and lighted torch;
With tripping feet and silvery tongue,
And bow and darts behind him slung!

"He tinkles in the shepherd's bell,
And charms the village maiden's ear;
By lattice high he weaves his spell
For ladye-fair and cavalier.
As sunbeams melt the mountain snow,
So melts Love's rays the high and low.

"Oh, boy-god, Love!—an archer thou—
Thy utmost skill I feign would test;
One arrow aim at Lelia now,
And let thy target be her breast!
Around her heart, oh fling thy chain,
Or give me back my own again!"

In the third stanza above quoted, several figures are introduced, (appropriately here in imitation of an old ballad) which serve to illustrate the use of foreign images, alluded to in the commencement of this article; these are, namely, "shepherd's bell," "lattice," and "cavalier," (and perhaps "lady-love,") when neither are known in the United States. We are surprised to discover in the writings of one usually so accurate as our author, in the second line of the last stanza the use of the verb "feign," for the adverb "fain," which means gladly, and is the word that is wanted here. We are not given to hypercriticism, and should have passed this instance by unnoticed, were not this a very common error, among both American prose and poetic writers.

The next article in the book, is the popular song entitled "THE OAK." It was suggested by a touching incident, which the poet relates in the "notes," which form entertaining and humorous addenda to the volume. A friend of the writer returned in after life to visit his paternal abode, now passed into stranger hands. It was shaded by an aged "roof-tree," under which he had played in childhood. Just as he came in sight of it, the owner was sharpening his axe, preparatory to cutting it down. "Why do you do this?" he gasped. "I am getting old, the woods are far off, and the tree is of some value to me to burn." "What is it worth for fire wood?" "About ten dollars." "If I give you that, will you let it stand?" "Yes." "Then give me a bond to that effect." The paper was drawn up, it was witnessed by his daughter, the money was paid, and he left the place with an assurance from the young girl, "who looked as smiling and beautiful as a Hebe," that

the tree should stand as long as she lived. We would, if our limits permitted, here quote the exquisitely touching ballad this incident suggested. Under the title of "Woodman, Spare that Tree," it can, however, be found in every music-store and on almost every piano in the country. No American song, we believe, has ever been received with such approbation, as this has universally met with. It has been repeatedly parodied here and in England, which is one of the strongest tests of unequivocal popularity. On this delightful little lyric, and two or three others, will Col. Morris's reputation as a lyric poet principally rest.

"Rosabel," is next in order, after the "Oak." It is a graceful production, but neither remarkable for originality or that concentration of thought and conciseness of expression, which lyrics call for. There is repetition and "profuseness of wordiness" in it, a tissue of pleasing numbers, gratifying the ear, but seldom interesting the feelings. We quote what we consider the best stanza. It is marked with that sweetness of versification which never deserts the poet, which smoothness, though desirable in odes and ballads, where strength and energy of expression are misplaced, in sterner themes it must be exceedingly difficult for the author to divest himself of, that he may give the necessary vigor to the subject.

"I miss thee every where, beloved,
I miss thee every where;
Both night and day wear dull away,
And leave me in despair.
The banquet-hall, the play, the ball,
And childhood's gladsome glee,
Have lost their charms for me, beloved
My soul is full of thee!

* * * * *
A sad and weary lot is mine,
To love and be forgot,
A sad and weary lot, beloved,
A sad and weary lot."

In the last stanza, which is the last one of the poem, the second and fourth lines should change places, to give force and finish to the whole; thus:

"A sad and weary lot, beloved,
To love and be forgot."

Instances of this inattention to sounding his verses, are, however, rare in this author; and from their infrequency strike us more forcibly when they do occur. An ode "ON THE DEATH OF GENERAL DELEVAN," is martial and spirited and highly creditable to the head and heart of the poet. As a poem, its unity and purity are destroyed by the introduction of the name of the deceased—always, in such cases, brought in with very questionable taste. Consequently, the two concluding lines,

Thy epitaph, oh Delevan!
God's noblest work—an honest man!

are the two weakest in the poem. Willis has

avoided this in his noble ode on the burial of his classmate, "Arnold," and thereby made universal the thoughts which otherwise must have borne a limited and inferior signification.

The next poem is one that vies in popularity with "The Oak," while it equals it in harmony of numbers and elegance of diction. In a note the poet says, "those who have heard the exquisite manner in which Miss Horton renders Mr. Horn's adaptation of this plaintive and touching air, scarcely recognise a far famed negro melody,* with which the hills, vallies and streams of the west have been vocal these many years." We transcribe this song entire, while we present our thanks to the poet for clothing, in such graceful drapery, so sweet an air. We believe it was Mr. Weeley who sagaciously adapted religious words to the licentious airs of his time, and introduced them into his church, in lieu of the lugubrious melodies that had descended from the sad visaged round-heads, saying that "If he could help it, the Devil should not have all the best tunes in the kingdom." To Col. Morris we would say, let not the African minstrel monopolize the sweetest, simplest, and most touching airs that are extant: this which you have rescued, is but one of many that cheer the boatman, as he rows his laden barge beneath the southern moon—the ploughman, as he treads his furrow—the woodman, as he wields his axe—each making water, field, and forest, vocal with wild and touching melody.

"A SOUTHERN REFRAIN.

"Near the lake where droop'd the willow,
Long time ago!

Where the rock threw back the billow,
Brighter than snow;

Dwelt a maid, beloved and cherish'd,
By high and low;

But, with autumn's leaf she perish'd,
Long time ago!

"Rock and tree and flowing water,
Long time ago!

Bee and bird and blossom taught her
Love's spell to know!

While to my fond words she listen'd,
Murmuring low,

Tenderly her dove-eyes glisten'd
Long time ago!

"Mingled were our hearts for ever!
Long time ago!

Can I now forget her?—Never!—
No, lost one, no!

To her grave these tears are given,
Ever to flow;

She's the star I miss'd from Heaven,
Long time ago!"

* The poet doubtless alludes to the classical lyric commencing,

"As I was gwine down Shinbone alley,
Long time ago!
Dere I meet ole cousin Sally,
Jumplin' Jim Crow."

For touching pathos, gentle versification, delicacy and purity of fancy, this little lyrical gem is not surpassed by any thing on the other side of the Atlantic: even by the divine Moore himself. This is one of the greenest leaves in our poet's garland.

The "ANNIVERSARY HYMN," (Fourth of July,) is a bolder effusion than we have yet met with in the volume. Its ease and spirit will be shown by the concluding stanza, as well as afford an exhibition of the poet's powers in a different vein than his wont—for it is of "the boy-god, Love," and "lovely woman," he most delights to discourse—twenty out of the thirty pieces in the volume, having love and ladies for their theme—a theme which has enlisted the most gifted geniuses since Apollo first made the groves vocal with his lyre, and which, through his Laura, gave Petrarch an immortality to which otherwise his name could never have descended. We quote the last stanza of the hymn which suggested these remarks:

"Heirs of an immortal sire,
Let his deeds your hearts inspire;
Weave the strain and wake the lyre
Where your altars stand!
Hail with pride and loud hurrahs,
Streaming from a thousand spars,
Freedom's rainbow flag of stars!
Symbol of our land!"

"LINES FOR MUSIC," are very musical lines, but contain no very striking passages that would bear us out in an extract. It is too long for a song and is wanting in that closeness of thought and a certain concise vigor, without impairing its grace, necessary in the lyric, in which a new change should be rung on every line. Here a chord is boldly struck at the outset of a stanza, which is made up of its subsequent vibrations that die faintly away in the last line.

"STARLIGHT RECOLLECTIONS," contain several of the light and graceful passages that characterize our poet:

"Your love on my heart gently fell
As the dew on the flowers at eve,
Whose bosoms with gratitude swell,
A blessing to give and receive."

It has been wedded to the most delicious harmony by Charles E. Horn.

"RHYME AND REASON," is an apologue, in which philosophy and fancy are combined in delightful verse. It reminds us of Collins, and is not unworthy of any body. The story is that Rhyme and Reason were twin-boys, and grew up together playmates. By and by—

— "the boys
Left their native soil—
Rhyme's pursuit was idle joys,
Reason's manly toil:
Soon Rhyme was starving in a ditch,
While Reason grew exceeding rich.

"Since that dark and fatal hour,
When the brothers parted,
Reason has had wealth and power—
Rhyme's poor and broken-hearted!
And now, or bright or stormy weather,
They twain are seldom seen together!"

"Wearies my Love of Letters," "When other Friends are round Thee," "My Mountain Bride," and "Silent Grief," are the titles of well known songs, set to music by Horn. They are all characterised by the lyrical ease of the poet. That commencing

"When other friends are round thee," is fully equal to any thing from his pen. "Bessy Bell," "Love Thee, Dearest!" (set to music by Horn, and sent to a friend on the day of his marriage,) "The Day is now Dawning, Love," are all neatly turned songs. The versification and syllabic flow of the latter is remarkably harmonious.

"THE MINIATURE," is in the best vein of the poet. The epigrammatic turn, with which it closes, is one of the neatest in the language, and is only equalled by the grace and skill with which the thought is executed. This little piece has travelled all over Europe, and been translated into the Spanish, French, German, and Italian languages. It was supposed to be the production of Moore, until claimed by the author.

"THE MINIATURE.

"William was holding in his hand
The likeness of his wife—
Fresh, as if touched by fairy wand,
With beauty, grace and life.
He almost thought it spoke:
He gazed upon the treasure still,
Absorbed, delighted and amazed,
To view the artist's skill.

"This picture is yourself, dear Jane,
'Tis drawn to nature true:
I've kissed it o'er and o'er again,
It is so much like you.'
'And has it kissed you back, my dear?'
'Why—no—my love,' said he.
'Then, William, it is very clear,
'Tis not at all LIKE ME!'"

"THE RETORT," is in the same vein. We quote it to show the versatility of the author's powers:

"THE RETORT.

"Old Nick, who taught the village school,
Wedded a maid of homespun habit;
He was as stubborn as a mule,
And she was playful as a rabbit.

"Poor Jane had scarce become a wife,
Before her husband sought to make her
The pink of country-polished life,
And prim and formal as a-quaker.

"One day the tutor went abroad,
And simple Jenny sadly miss'd him;
When he returned, behind her lord
She slyly stole and fondly kiss'd him!

"The husband's anger rose!—and red
And white his face alternate grew!
'Less freedom, ma'am!'—Jane sigh'd and said,
Oh, dear! I did not know 'twas you!'"

The fragments of an "INDIAN POEM," exhibit our poet's trying his muse in a new field. Some of the passages are vigorous and highly poetic, but the full vigor of many lines is lessened by a lyrical polish which has become habitual to his pen. We will quote the second stanza:

"See their glittering files advancing,
See upon the free winds dancing
Pennon proud and gaudy plume:
The strangers come in evil hour,
In pomp and panoply and power,
To plant a weed where bloom'd a flower,
Where sunshine broke to spread a shower,
And, while upon our tribes they lower,
Think they our manly hearts will cower,
To meet a warrior's doom?"

"LINES TO A POET," are good, and marked for the smoothness of its verse. It was originally addressed to Prosper M. Wetmore, and (which goes to illustrate what we have before said in reference to the introduction of sir-names into a poem,) began,

"Prosper Montgomery Wetmore!
There's music in the name."

The poet himself has borne testimony to the equivocal taste of this, by rejecting, in his later edition of the poem, the first two lines, and substituting the following:

"How sweet the cadence of thy lyre!
What melody of words!
They strike a pulse within the heart
Like songs of forest birds,
Or tinkling of the shepherd's bell
Among the mountain herds."

The last stanza is very fine:

"Then blessings on thee, minstrel—
Thy faults let others scan:
There may be spots upon the sun,
Which those may view that can;
I see them not—yet know thee well
A poet and a man!"

A playful sonnet, a humorous tragi-comic effusion, entitled "The Dismissed," which is sufficiently expressive of its character, and a graceful song, beginning, "What can it Mean?" close the lyrical portion of the volume. We give the first and last stanza of this:

"I'm much too young to marry,
For I'm only seventeen;
Why think I then of Harry?
What can it mean—what can it mean?"

* * * * *

* Originally written "Wetmore," for "minstrel."

"I'M NOT IN LOVE!—Oh smother
Such a thought at seventeen;
I'll go and ask my mother
What it can mean—what it can mean?"

Three addresses, for the benefit of William Dunlap, James Sheridan Knowles, and Henry Placide, Esq's, conclude, with the addition of a few pages of entertaining notes, the volume. These addresses are humorous, epigrammatical, and exceedingly appropriate. They contain many passages of high poetic merit. We quote a portion of the address written for Placide, that we may exhibit the poet under a new phase:

"Oh ye, who come the laggard hours to while,
And with the laugh-provoking muse to smile,
Remember this! the mirth that cheers you so,
Shows but the surface—not the depths below!
Then judge not lightly of the actor's art,
Who smiles to please you, with a breaking heart!
Neglect him not in his hill-climbing course,
Nor treat him with less kindness than your horse:
Up hill indulge him—down the steep descent
Spare—and don't urge him when his strength is spent;
Impel him briskly o'er the level earth,
But in the stable don't forget his worth!
So with the actor—while you work him hard,
Be mindful of his claims to your regard."

The beauty of this passage is self-evident. The last four lines, but two, clothing in new language an old adage, have recently been adopted by an English sporting journal for its motto, than which nothing can be more appropriate.

We have now, as far as our limits would permit, shown on what foundation Col. Morris lays claim to rank among American poets. That he holds the first rank among them, we neither assert nor believe; but that he is entitled to a distinguished place among the few who have been "tried and found worthy," will not be questioned by any one who has impartially read this article, and seen fit to exercise his judgment with regard to the merits of the poet.

The characteristics of Col. Morris's poetry, are delicacy of perception, elegance of expression, liquid flow of syllables, and pervading smoothness of versification. The characteristic feature of the poet's mind, seems to be gentleness, tenderness of feeling, playful humor, and a fancy, warm but chaste, that delights in picturing Love under his thousand varied and beautiful shapes, in dallying with his locks, in sporting with his bow and arrows, and with graceful reverence adoring him in his own fair temple—woman—flinging upon her heart, his altar, the votive offerings of his gentle muse. He is not a poet of nature, but of the heart! As a man of the world, he displays an acute and humorous insight into character, an instinctive perception of the ludicrous. He tells an admirable story and possesses an inexhaustible fund of amusing anecdote. His wit does not sparkle, but glows

and warms the heart with its genial and laugh-exciting influence. As a member of society, few men are more beloved or universally esteemed; and his amiability of heart and kindness of manners, have drawn round him numerous and attached friends. As a literary man, he is without professional envy, and we regret to say, also without sufficient ambition to urge him to labor for the name which his genius and talents, if industriously exercised and properly directed, should win for him. It is to be hoped, that disburthened of the cares of editorship, he will devote his literary leisure to the production of something more elaborate than he has yet attempted, which will give him a substantial place in the foremost line of American poets. Col. Morris, as well as a literary, has long been a military man. After passing through the several grades of rank, he has recently been appointed general of a New York brigade of artillery. When colonel, he was of essential service in quelling the formidable riots of 1834.

Colonel, now general Morris, is a little under the medium height, his person inclined to portliness, his face full, his complexion ruddy, his eyes dark and exceedingly fine, with a laughing expression, indicative of the humor that constitutes a prominent trait in his character. His forehead is high, fair and well shaped, showing, phrenologically, prominent developments of the imaginative and inventive powers; the organs of thought and reflection being less apparent. Though somewhat heavy, his head is decidedly intellectual: altogether, our poet would be called a "handsome, dark-complexioned, stout gentleman," thirty-eight years of age, or thereabout. He has been married twelve years, and resides at a delightful seat, called "Undercliff," among the highlands, on the banks of the Hudson, and in the midst of the grandest scenery in America, where he enjoys, we trust, that "otium cum dignitate," so congenial with the feelings of the poet.

THE WORLD.

The world presents an infinity of aspects. Shakespeare called it a stage, and men and women the players. The merchant regards it a great bazaar, in which every thing is an article of trade—the physician deems it a great hospital, the preacher looks at it as a church, mine-host fancies it a tavern on the great highway from nothing to eternity, and to the black-leg life seems a game, in which death holds all the aces and trumps and takes whomsoever he pleases. It is a school-house to the pedagogue, a ball-room to the dancing-master, and a prison to the turnkey. The sportsman views it as a great field, on which Death is the wily Nimrod and men and women his game; while the theological piscator deemeth it a wide fish pond, in which all, from the whales to the minnows, are nibbling and biting at the gilded baits which the Devil throws in.—[*Hesperian*.

The following tribute of affectionate remembrance and sympathizing friendship, has been delayed to this late period by family afflictions and the protracted indisposition of the authoress. In transmitting the lines the writer accompanied them with a request that the obituary notice inserted in the "*Southern Religious Telegraph*," a few days after the afflictive dispensation, should be republished with them in the *Messenger*. We could have no hesitation in complying with this touching and reasonable request. Indeed the *Messenger* would have been a most appropriate place for this deserved tribute to the memory of one whose worth and excellence could only be fully known and appreciated by her surviving partner, and his bereaved family. But he shrunk from obtruding his griefs on his readers, knowing that nothing but the sustaining hand of Providence, and the prospect of an endless reunion, could impart consolation to his lacerated feelings. Time may alleviate or mitigate his sorrow, but cannot banish from his remembrance one who was emphatically his companion, his counsellor—ever ready to console and support him in the hour of adversity—and a faithful and devoted partner in sorrow and in joy.

—
LINES IN MEMORY OF

MRS. MARGARET ANN WHITE,

Who died in Richmond, Va., December 11, 1837—aged 43 years.

Oh, holy is the place
Where rest the ashes of the sainted dead;
Angels of grace,
Their viewless wings in ceaseless vigils spread;—
Most holy is the place—there, lightly, lightly tread!

Hope cheers their long repose;
There spirit-minstrels chant celestial lays
To Him who rose,
And by His power their slumbering charge shall raise,
And cause the grave's seal'd depths to burst with songs
of praise.

And she, whom now we mourn,—
That angel-one to whom the grace was given,
While pains were borne,
And nature rent and soul from body riven,
The symphonies to catch, and sing the strains of Heaven;

She, too, with songs shall wake,
And that, now nerveless hand—its torpor o'er—
The harp shall take,
And from its tuneful strings such sweetness pour,
As only they can wake who sing "earth's sorrows o'er."

Till then, thou blest one, sleep!
And lingering love, by that green grave of thine,
Long, long shall weep,
And myrtle wreaths with rosy garlands twine—
Emblem of fadeless love—to grace that sacred shrine.

And with the mourning band
Who to that hallowed haunt their offerings bring,
A stranger-hand
Would o'er her urn a simple tribute fling;
Tho' but a forest-rose—frail, fading thing!
Love consecrates the gift,—'tis friendship's offering.

Maria.

ELIZA.

From the Southern Religious Telegraph.

Died, at her residence, on Shockoe Hill, December 11, 1837, Mrs. MARGARET ANN WHITE, in the forty-third year of her age, wife of Mr. Thomas W. White, Editor and Proprietor of the *Southern Literary Messenger*.

The deceased had been twenty-seven years in married life and was buried on her marriage day, the 13th December.

She had become a member of the visible church in this city, and it is more than hoped, of the invisible church, about sixteen years ago, under the ministry of the lamented Dr. John H. Rice, then Pastor of the first Presbyterian church, Richmond, and afterwards Professor of Christian Theology in the Union Theological Seminary. Doubtless a happy meeting has taken place in the upper sanctuary between the Pastor, and this lamb of his flock, and this too in the presence of the Master Shepherd.

Her religious awakening was of a very strongly marked character, and her distress on account of sin was perhaps unusually deep and long continued; but when she felt the principle of rebellion and unbelief subdued, and found peace with God through our Lord Jesus Christ, her religious enjoyment was equally marked and decided.

Occasional doubts she had in the earlier periods of her christian experience, but they were all gradually dispelled, and disappeared in the course of a prolonged experience of growth in grace; and long before her spirit took its upward flight, her faith could say "abba, father," with as simple a certainty as her natural memory could recall the parents of her youth. "He that is begotten of God keepeth himself, and that wicked one toucheth him not; and we know that we are of God, and the whole world lieth in wickedness."

During the visitation of the cholera, in the fall of 1832, she was called to the painful trial of surrendering her only surviving son, a promising young man of nineteen years, in which affliction she was greatly supported, and to which she was greatly reconciled, not only by the reflection that this was her heavenly Father's will, but also by the fond hope that this was his chosen mode of calling some of her loved household to a saving acquaintance with himself. The feeling she aimed to cherish was, "here, Lord, am I, and the children whom thou hast given me."

One year ago last August, an inquiry into the causes of her declining health, and peculiar sufferings, satisfied her physicians and herself that recovery was hopeless; and that she must gather in her strength and fortitude, and call all her piety to the task of patiently enduring the slow torture, and finally becoming the subject of the certain triumph of an internal cancer. Blessed be God—this was not the commencement of her acquaintance with Him. She knew Him long before—and knew Him to be "a very present help in trouble."

She was resigned from the first—her mind was delightfully exercised—"her peace was like a river." Her suffering came daily like the person and countenance of death in her chamber, but her earthly physician came faithfully with his skillful alleviations, and then her heavenly physician was never absent, making her daily more happy than the daughters of health and bloom, and "giving her songs in the night."

Her decline was uninterrupted, though unexpectedly slow: her bodily sufferings apparently on the constant increase, as was also her experience of that "peace which passeth all understanding." It was always good to visit her sick room, at least in the experience of all those who love to breathe the atmosphere of heavenly communion; and long will her pale and smiling face, and the quiet apartment where she lay, be the picture of hallowed recollections.

Towards the last, her spasms amounted to convulsions, and they followed in such rapid succession, that only at short intervals, and far between, was she able, apparently, to command her thoughts at all. For two weeks before she breathed her last, her body seemed to be given into the hands of her disease, which kept it unceasingly upon the rack; but there is no necessity from this to believe that her spirit (the link of sympathy being partially broken,) was not the meanwhile in quiet anticipation reposing on the bosom of its heavenly friend. A lucid interval was allowed her to give the affectionate farewell embraces to her husband and her daughters and servants. Her death at last was apparently but a soft and easy cessation of the labor of living. "Blessed are the dead who die in the Lord. They rest from their labor."

SOUTHERN LITERARY MESSENGER.

VOL. IV.

RICHMOND, NOVEMBER, 1838.

No. XI.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

THE ITALIAN OPERA.*

One of the greatest enjoyments of a European residence, to a person of natural or cultivated taste, is derived from the opportunity which it affords, of hearing the best music, by the best performers. Without pretending to the exquisite ear or exalted passion, of a professed *dilettante*, I can truly say that I deemed this one of the greatest of my privileges and pleasures. It was in Paris, where I resided during the first years of adolescence, that I chiefly enjoyed the gratification of which I speak. The Italian opera there is constantly supplied with the most eminent artists, and was during the greater part of my time, under the direction of the celebrated *Maestro* Rossini himself. He was not exactly the manager, the *impresario* as the Italians phrase it; but a sort of general superintendent who directed the choice and the getting up of the performances, which were composed, chiefly, of his own pieces. This was obviously a great and rare advantage. It was like Shakspeare or Moliere, superintending the production of his own immortal works. It may not be a little curious to know, that so far from presenting the refined or intellectual appearance which we would be apt to attribute to him, the great composer is of a rubicund, jolly countenance, and of gross corporeal proportions. His tastes and habits are in accordance, for he has the reputation of being one of the greatest epicures or rather *gastromomes* of the day. In the quaint language of Charles Lamb, he is a great lover of "the delicious juices of meats and fishes." It diminishes our interest in eminent musicians, to learn that their minds and habits are, generally, but little in harmony with the ethereal character of their pursuits. They are certainly with many honorable exceptions, apt to be intemperate, and are rarely intellectual, though I am not disposed to judge them so harshly as Dr. Johnson, who observed, if I am not mistaken, that Dr. Burney was the only musician he ever knew, who was not a fool. The former unfortunate propensity may, perhaps, be explained by the necessary conviviality of their habits, and the latter defect attributed to the absorbing character of their studies. When alone, a musician, instead of thinking, hums an air, or sings with his mind, to employ with some modification a celebrated figure of Milton, who says "the hand sang with the voice."

To return to the Italian opera in Paris, the celebrated female performers in my time, were Pasta, Sontag, Malibran, Pisoni, and Cinti; of the other sex, the

most distinguished were Rubini, Galli, Tamburini, Garcia and Zuchelli. There were many other secondary performers of great merit who would have ranked in the first class elsewhere, but whose talents were here eclipsed by superior luminaries. The edifice, appropriated to the opera, (which was burnt to the ground the other day, when the acting manager, Severini, lost his life,) was of moderate dimensions, constructed chiefly with a view to musical effect, and ornamented with taste and characteristic propriety. It was the resort of the best company of the metropolis, who always made their appearance *en grande toilette*, which is not the custom in French theatres, except at the first representation of new pieces, and on benefit nights. This promotes the enjoyment and profit of theatrical entertainments not a little, by the absence of restraint, and by obviating the necessity of tedious or expensive preparation. The spectacle presented by the audience of the Italian opera, was always exceedingly striking and attractive. The *élite* of Parisian society, not to speak of distinguished strangers, was always to be seen assembled there. There was something exceedingly fascinating, nay, intoxicating, in the spectacle of so much distinction, beauty and fashion, heightened by the ethereal strains of music,

"Which into souls doth creep,
Like to a breeze from heaven."

Some of the most beautiful women, both French and foreign, I ever beheld, frequented the *Salle Favart*, as it was called, and contributed much to the gratification of the audience. Among these, two Spanish ladies, Andalusians I believe, always attracted much attention. They were "high damas," of stately form and rather massive proportions, with the raven hair, proudly flashing eyes, and soft brunette complexion of their country, and an almost imperceptible down, slightly shading the upper lip, as I have often observed in Spanish women, which adds to the imposing character of their faces. But the "observed of all observers" was a young English lady of rare beauty. She generally made her appearance late, in company with a fine looking married sister, and her entrance was always announced by a murmur of applause from the whole assembly; an involuntary, but respectful homage, to the power of beauty. Fair, with the fresh, yet delicate complexion and slightly expanded form of her countrywomen, she possessed that indescribable refinement or rather purity of air, which imparts something angelical to the whole person. She was always attired with simple elegance, *simplex munditiis*, and wore her hair, which was almost of the hue and transparency of amber, (the *flaxus* of the ancients, the *capelli d'oro* of the Italians,) parted *à la Madonna* upon the forehead, on which was placed, in accordance with the fashion of the day, a gem of antique fashion, supported by a single strand of those delicate Venetian chains, light and exquisite as frostwork. As I gazed, enchanted, upon this beautiful creature, how often did I wish for the "art that can immortalize" of a

* We are indebted to a distinguished literary gentleman, now a resident of Washington city, for these truly interesting and brilliant recollections of the Italian Opera. But, in the store from which these strains proceed, there must be a thousand others, and of every description, lingering behind. Such a memory must be a treasure, that abounds in riches of various sorts. Give us reminiscences of scenes and persons, of literature and art—the stock cannot be easily exhausted, and the favor he will confer upon the public cannot be too highly appreciated. We ask it for ourselves—we ask it for others.—*Ed. So. Lit. Messenger.*

Titian or a Lawrence—but I have her portrait vividly painted upon my mind, I cannot say my heart, for I did not know her, and worshipped her only as a Chaldean would a star. She was to me a cynosure.

Among the company which frequented the opera were always to be distinguished the professed amateurs, or *dilettanti*, as the Italians call them. These persons are invariable attendants, occupying always the same places, from which they could scarcely be missed without a loss of *caste* or reputation. They are characterized by an air of intense, yet chastened enjoyment, which rarely exhibits itself in boisterous applause. The chariness of their praise renders it the more acceptable to the performers, whose reputation and success depend very much upon the fiat of these gentlemen, who are "nothing if not critical." They are, for the most part, Italians, who, all the world over, are recognized as arbiters in such matters. Byron has a very amusing description of one of these *judicial* gentlemen, in the following lines from Beppo, the happiest specimen of the serio-comical or Pulci verse in the English language, if we except the Rape of the Lock, which, however, is rather a poem of the mock heroic order.

He was a critic upon operas, too,
And knew all niceties of the sock and buskin;
And no Venetian audience could endure a
Song, scene, or air, when he cried "seccatura."

His "bravo" was decisive, for that sound
Hush'd "academia" sigh'd in silent awe;
The fiddlers trembled as he look'd around,
For fear of some false note's detected flaw.
The "prima donna's" tuneful heart would bound,
Dreading the deep damnation of his "bah!"
Soprano, basso, even the contra-alto,
Wish'd him five fathom under the Rialto.

Distinguished from these again are the enthusiasts; the passionate admirers, who are very aptly termed musical fanatics, *fanatici per la musica*. They make up by intensity of enjoyment for the less fastidious delicacy of their taste, and are more anxious, or capable, of feeling a great deal, than of judging with extreme nicety. Their habit is to go into ecstasies at every touching note or brilliant passage, and to exhibit the varying, impassioned effects, attributed, by Dryden, to the divine Timotheus. Their delight seems to be absolutely convulsive, and their sensibility to music the true *hysterica passio*. One elderly gentleman of this class, used to amuse me, particularly. His appearance was distinguished by nothing but a singularly long, flexible nose, which seemed to be the receptacle of a vast quantity of snuff. This *Slaukenbergius redeivius* of most unromantic aspect, regularly accompanied the *prima donna* with the tap of his hand upon the box, increasing constantly in vehemence as she proceeded, until he lost all control of himself, and would throw his body backward and forward and laterally, like a person with St. Vitus' dance; and then at length, absolutely overcome by the violence of his sensations, would fall back, and explode in a storm of *brava bravissimas*, gradually dying away in faint murmurs of palpitating emotion, like one tickled into a fit.

When I arrived in Paris the celebrated Pasta was the reigning *prima donna*. But first, let me tell what a *prima donna* is. A *prima donna*, then, is the high priestess of music; a sort of profane St. Cecilia, who is absolutely deified and worshipped by the devotees to the "concord of sweet sounds." If she be handsome, which is gene-

rally the case, for it requires a rare combination of advantages to assume this exalted position, the enthusiasm with which she inspires her admirers, is unbounded. She is the favorite of kings and princes; she has the nobles of the land in her train; she never appears, unless thronged by a crowd of impassioned devotees. Wealth is poured at her feet like water; the most costly presents, from every source, are heaped upon her; jewels without number, "pearls and barbaric gold" are literally showered upon her laurelled head.* Her attendant is a prince; her humblest servant some haughty ambassador. She feeds upon the perfumed breath of applause, and lives and moves and has her being in the "purple light of love." Duels are fought for her; suicides are committed on her account; she has her faction which divides the state, with the zeal and bitterness of Whig and Tory, Democrat and Federalist. Beware, in a mixed company how you disparage her merits, or exalt her rival: you may receive a cartel upon the spot, and the dawning light of the morrow shine through your body. Such a life must indeed be a fascinating one, to a proud and beautiful woman, but it has its drawbacks and disadvantages like the humblest condition. It is difficult to maintain a position of such giddy height, and the necessity of sooner or later descending from the pedestal, and retreating again among the undistinguished multitude, must be humiliating, not only to submit to, but even to think of. This was the fate of the distinguished Fodor, shortly before the period of which I speak, who was deprived of the powers of her voice, which, not even a residence in the pure and balmy air of Parthenope, could restore.

To return to Pasta, though not precisely handsome, she was a woman of most noble face and figure, formed by nature to personate the queenly characters which were generally allotted to her. She was considered, by many, the first tragic actress of the age, nor was there much exaggeration in the estimate. There was something high and majestic in her air, and it might be said of her, as of Venus, by Virgil "*inaccessa patet Dux*"—her gait bespoke the goddess. Her voice, which, if I recollect right, was what is called a *mezzo soprano*, that is, one embracing the intermediate portion of the female scale, was of great volume, force and flexibility, though in its lower notes a little husky (*velate*) which very defect, however, she was skilful to turn to dramatic effect. Never shall I forget her personation of the queen in Rossini's noble opera of *Semiramide*, the finest, in my humble opinion, of his serious works. Pride, ambition, love, remorse, despair, were depicted, as if felt, in turn, with a fervor and force, to which music seemed to add tenfold expression and power. So highly was she esteemed by her admirers, that they gave her the title of *la ditta*, the divine, which became the customary prefix to her name. This recalls to my mind, the profane enthusiasm of the admirers of a great singer, who were in the habit of exclaiming "one God, one Farinelli!" In the sublime opera of *Mosè in Egitto*, I once had the rare good fortune to hear Pasta, in com-

* I think it was Sontag, who, before her marriage, exposed to sale the various presents she had received during her short, but brilliant career. The quantity of jewels, watches, rings, chains, necklaces, &c. &c.; of cashmere, and bone, and embroidered handkerchiefs, and ermine cloaks, and boxes of conical perfumes, and packages of gloves without number, &c. &c. was incredible.

pany with Cinti, Rubini, Galli, Zuchelli and other artists of distinction, a combination of talent which made an impression not easy to be effaced.

Cinti, whom I have just named, was a beautiful Italian, of rather diminutive height, yet slightly massive proportions, whose clear, melodious and graceful *soprano* was always listened to with delight. In the French opera of *Le Rossignol*, in which she "trilled her thick warbled notes" in emulation of the nightingale, her performance rose to the highest grade of art.

I shall never cease to remember, the first appearance, in Paris, of the inimitable Sontag, whose early retirement from the stage, to quote with slight modification Johnson's remark upon Garrick, eclipsed the gaiety of the musical world. It was the day before I set out upon a tour to Italy, and I made no small effort to be present, upon the eventful occasion, the "dramatic solemnity," as the French phrase it. She came, preceded, indeed, by a brilliant reputation, but which had not yet undergone the severe test of a Parisian audience, composed, as it is, of distinguished *connoisseurs*, from all parts of Europe. The opera chosen for her *début*, was *la Cenerentola*, in which, as is well known, the heroine makes her first appearance in a rustic dress, to which and to domestic drudgery, she has been condemned by her proud, unfeeling sisters. The first tones which streamed from her lips, clear, brilliant and dashing, electrified the house, and at once insured a success, which went on increasing, until she quitted the scene of her uninterrupted triumphs. Her voice cannot easily be defined, or even described. It was one of unrivalled power and compass; clear, full and sweet; of rare flexibility and wonderful precision. Her *staccato* notes were particularly striking and came sparkling out, with the clearness and brilliancy of the diamond. The management of her voice was admirable. She would run up and down the chromatic scale with wonderful rapidity and distinctness; dashing in quick transition between the most distant notes; jumping whole octaves at a leap, yet lighting upon the most remote points, with an agility and accuracy which seemed to be the effect of magic. Her execution of the variations of Rode, in the piano scene of the Barber, was a rare *tour de force*, a perfect *legerdmain* of the voice. She was, withal, a lovely woman, with the simplicity, yet not the coarseness, perhaps erroneously attributed to the fair of Germany; of sweet manners, modest deportment and perfect propriety of life. These attractive qualities, proved a general misfortune, for they won her the hand of the young Count Rossi, Piedmontese minister, I believe, at the court of Berlin, which she is said to adorn by her talents, beauty and virtue. This marriage, which was for a long time kept secret, at one time threw a cloud upon her character, as she was compelled to retire for some months from the scene, for a reason which nothing but matrimony can justify. The scandal, however, was at length happily cleared up, by the avowal of the honorable connection. I never fail to smile, when I recollect a conversation, which I had with a Frenchman, who sat next to me, at her reappearance after this event, and before the *éclaircissement*. He applauded her with peculiar vehemence, as he told me, for that very cause, because it would secure her services to the public, as long as the duration of her delightful talent. He maintained with true French

philosophy, that virtue was a vice in an actress; as it rendered her liable to be married by some man of rank or opulence, to whose private gratification the pleasures of nations were thus sacrificed. "*C'est le plus affreux des monopoles*," "it is the most detestable of monopolies," he exclaimed, citing to me at the same time, the instance of the singer Naldi, who married the Count de Sparre, and that of the beautiful dancer, Mercandotti, the Taglioni of her day, who became the wife of the rich Ball Hughes, or Hughes Ball, I forget which, more generally known as Golden Ball; not to mention other examples.

It was my good fortune to hear Sontag, several times in company with Malibran, whose organ was perhaps, not so extraordinary, but, who excelled her distinguished rival, in passion, expression and dramatic talent. She made her *début* in America, with great applause, and sheathed her maiden sword, if I may be allowed the figure, upon the boards of New York. Here she was induced to contract a marriage with an old French merchant, who proved a bankrupt, a few days after the completion of this ill-starred and ill-assorted union. Availing herself of some informality in the procedure, she succeeded in getting the marriage annulled by the French tribunals, when she bestowed her hand freely, upon de Beriot the violinist, who was so much censured, by the English public, though perhaps unjustly, for his alleged insensibility after her melancholy death. Her first appearance in Paris, though indicating great talent, was not decidedly successful. She had the good sense to retire for a season, and improve her wonderful faculties by thorough training, the consequence of which was, that at her reappearance, she at once captivated all ears and hearts, and placed herself in the front rank of performers. She was indeed a genius in the truest sense of the word. All the powers and effects of her voice seemed to emanate from the soul within. Every thing which she did, appeared to come from inspiration; like the Pythonesse, she seemed, agitated, rapt, possessed. When kindled by the enthusiasm of her nature or the passions which she represented, she would often produce effects as surprising to herself as to others, and which seemed ever new and inexhaustible. She seemed to give herself up, *se laisser aller*, to the illusion of the moment, and really, feel all and more than she represented. She had all the qualities of soul and person to make a great actress. She was literally consumed by enthusiasm, and the harsh treatment of her father, together with the events of her early life, had made her deeply familiar with tragic emotions. Her ambition, too, was so great, that she would sometimes actually faint upon the scene, from the earnestness of her efforts and the intensity of her feelings. Her face was faultlessly classical, with a chiselled definiteness of outline, and her figure chaste and graceful as those sometimes seen upon an antique vase. Every year added to the talent and reputation of this unsurpassed queen of song, until she perished at length, amidst the smoke and steam of Beotian Manchester, in the full blaze of her fame, a victim to the enthusiasm of her temperament and her devotion to the sublime art of which she was so illustrious a votary. "Whom the gods love die young." Melancholy consolation! May flowers of softest hue and sweetest fragrance spring from the dust of her who was the pride and delight of

nations! Fit emblem and mourner, may the nightingale warble sadly among the branches which shade a tomb, so often moistened with "melodious tears." Alas, poor Malibran!

I must not omit to mention Pisaroni, the most celebrated *contralto* of her day. Her voice, which was full, strong, and solemn, might not be unaptly called a female bass, and she generally appeared in male characters, many of which were written expressly for her. She was as remarkable for ugliness as talent. Her face, which was broad, coarse and swart, and distorted by the most horrible grimaces when singing, was in keeping with her low squat figure—whose attitudes, to make use of an inelegant comparison, reminded one of those of a cow. There could not be greater evidence of her talent than the high gratification which she uniformly afforded, notwithstanding such repulsive disadvantages. She had much intelligence—combined with sensibility, which qualities were exhibited with the greatest effect in the fine character of *Arsace*, in the opera of *Semiramide*, to which I have already alluded, and in which I several times heard her sing with Pasta. The unfeminine character of her low, rich, sonorous voice, no doubt contributed not a little, to her success. I cannot forbear to relate an anecdote regarding her, which I had, but the other day, from the person who is the principal subject of it. An American gentleman who fills with distinguished ability an honorable station in his native state, was travelling a few years since, from Bologna to Venice. Upon entering the coach, at the former place, he observed among the passengers, a lady, whose singular ugliness made a very disagreeable impression upon him. The purity of her accent and elegance of her conversation combined with her engaging manners, soon however reconciled him to her appearance, and they were not long together ere she became quite a favorite with him. To while away the tedium of the route, my friend, among other expedients, proposed singing, to which the lady, after some hesitation consented, archly, however, making it a condition that he should take the first turn. Mutual pressing and bantering ensued, and the worthy Virginian, who probably did not know of a bull's foot, in music, (as the schoolboys say,) was upon the point of favoring the company with a specimen of transatlantic vocalization, when fortunately for himself and the musical reputation of our country, the coach reached the bank of the Po, where it was detained a few moments by the preparations for passing the ferry. Here the accidental sight of her passport, revealed to the astonished Virginian, that it was the famous Pisaroni, whom he was about to favor with a song by way of encouragement! Upon re-entering the coach, he expressed to her his gratification at the good fortune which had thrown him into the company of so celebrated a person, good-humoredly upbraiding her, at the same time, for the ridiculous position in which she had nearly placed him. She acknowledged his compliments with becoming politeness, observing that she preferred maintaining her *incognito* in travelling, as it saved her from much embarrassment, and the prejudices of those who had no tolerance for her vocation.

A little incident of harmless scandal may not be out of place here. Emulous of the success of Sontag, a countrywoman, Mademoiselle Heinefetter, came to

Paris, having eloped from the court of the Grand Duke of Hesse Cassel, to whose chapel she had been attached. She was a remarkably fine, luxuriant looking person, which circumstance, though she possessed considerable professional cleverness, gave her for a short time, a success, to which perhaps the order of her talent did not entitle her. But what excited the public strongly in her favor, was the circumstance, that the Grand Duke caused his resident in Paris to insert a publication in the papers, complaining in so measured terms of the treachery of her *escapade*, and it was even hinted that a formal demand for her, was to be made to the government. The French, who immediately suspected, that the regrets of his Highness proceeded from a cause more tender than her voice, (whether excited by retrospect or anticipation, it was hard to say,) made themselves very merry at the expense of the petty German prince, and swore stoutly that he should not have her back without her consent. "*Ce n'est pas là une affaire du ressort de la diplomatie.*" "This is not a diplomatic matter," they exclaimed; "his Serene Highness is very ridiculous in endeavoring to captivate a lady by such means." What became of her, I do not know. Not having met with success equal to her expectation, I think it probable that she finally listened to the solicitations of the Duke, and returned to delight the stately court of Hesse Cassel and its susceptible master.

Of the gentlemen I will not speak particularly. Tamburini, whose name is a very appropriate one, is the first bass of his age, if Lablache whom I have not heard, be excepted, and Rubini without comparison, the best tenor.

It was indeed a privilege, a rich banquet for the soul, to hear the graceful melody of *Cimara*, the touching notes of *Peisello*, the unearthly strains of *Mozart*, and the rich, various and brilliant music of *Rossini*, executed by such accomplished artists. Often when exhausted by excitement, or vexed by the turmoil and cares of life, have I soothed my ruffled feelings, and recruited my jaded spirits, by a resort to this highest and most intellectual of the pleasures of the sense, if music can be so called. Of all my enjoyments abroad, (I speak of mere enjoyments,) that which I best remember, and most regret, is the one I have just described.

Before I close, though not strictly in accordance with my subject, I must say a few words about the celebrated Paganini, who has attracted so much attention in the last few years. I had the pleasure of hearing him before he left Italy, and can truly say, he is the most wonderful person I ever met with. I cannot mistrust the impression he produced upon me, because it was made before I had heard of his reputation or even his name. During a short residence in Florence, with boyish curiosity, I managed to obtain admission to the morning rehearsals at the opera. On one of these occasions, Paganini who, as I said before, was entirely unknown to me, presided at the repetition of a concert, which he was to give in the evening. I think I was the sole auditor, besides the performers, vocal and instrumental. The instant he touched the violin, I felt the effect of his wonderful talent. I have heard the most celebrated violinists in Europe, but he is beyond all comparison with them. In his hands the instrument becomes something else and more. The manner is

which he places it under his chin and left ear, (which seems to listen intensely to its softest breathings,) and grasps it with his long, bony fingers, is very peculiar. He draws the bow over the strings with long sweeps, sometimes very gently, and at others as if he would crush all beneath it. The effects which he produces are as various as they are extraordinary. Now exquisitely delicate and soft; then brilliant, animated and graceful; and at times wild, thrilling and unearthly; he passes in rapid transition from one to the other. Sometimes you seem to hear the soft breathings of an Eolian harp; then, the gay notes of a merry company; anon waftings of heavenly music that call to mind,

"That undisturbed song of pure concent
Aye sung before the sapphire-color'd throne;"

terminating at last in

"Lamentation loud
Heard on the rueful stream,"

such wailing sounds as startled the ear of Dante, when he approached the gates of eternal misery.

Quivi sospiri, planti ed alti gural
Blonnavan per l'aer senza stelle,
Perch'io al cominciare ne lagrimal,
Diverse lingue, orribili favelle,
Parole di dolore, accenti d'ira,
Voci alte e fioche, e suon di man con elle,
Facevano un tumulto. *Dante—Inferno: Cant. III.**

So clear and round are Paganini's tones that they seem to proceed from an instrument stringed with glass. Independently of his execution he possesses genius in the highest degree, which seems to master and tyrannize over his soul. He is the mere instrument of the spirit within. When executing his musical improvisations, the expression of his eye becomes intense and fitful, his frame shudders, and his arms and fingers act with an apparently convulsive motion. He has then the air of a galvanized corpse. It is at these moments, he produces those wild, thrilling and tempestuous effects, which cannot be listened to without emotion too intense to be agreeable. A fierce demon seems to agitate his frame, and it is when in this condition, that his instrument has been compared to a wild beast, which gnawing his vitals, draws from him those wailing and agonizing sounds. His appearance adds, not a little, to the effect of his extraordinary powers. Tall and gaunt, with a cadaverous face, sunken eyes of hectic transparency, hollow cheeks, and long, lank, dark locks, falling down to his shoulders, he is an admirable personification of that enthusiasm of which he is the victim. He is, or was, very much like the portraits I have seen of Irving, the mad Scotch preacher, who set all London in a ferment, some years ago. It is said that such is the effect of his performance upon his nervous, excitable temperament, that it often incapacitates him for some days after. There is no affectation about him, but rather an awkward stiffness, and his bow is so constrained and uncouth, that it has been facetiously observed to be just such a reverence as a

lobster might be supposed to make. His performance on one string, I look upon as a mere *tour de force*, an object of vulgar curiosity, and would not mention it, but for the story by which it is generally explained. It was reported and generally believed, that he had suffered a long imprisonment for having assassinated his wife. His sole resource was his violin, and having but a small supply of catgut, as the story goes, in order to economize it, he learned to dispense with three of the usual number of strings. This melo-dramatic tale, added much to the curiosity and interest which he inspired. People looked upon him with a mysterious dread, as a sort of demon incarnate. He was perhaps the devil who played for the sleeping Tartini. The magic artist never deigned to contradict the story, until walking one day, on the *boulevards* of Paris, he saw in a shop window, a picture representing himself with a fiend-like countenance, plunging a dagger into the bosom of the imploring Mrs. Paganini. He could not stand the joke carried thus far, and accordingly addressed a letter to one of the public journals, declaring that there was not the slightest foundation for the tale, and appealing to respectable persons, who had known him from infancy, for the truth of his averment. From this letter, it appeared that he had been a musical prodigy from his infancy, and that his whole life had been devoted to the cultivation of his divine art. In fact, he had never been married. Little Miss Watson, who eloped with or rather to him, does not seem to have regarded him as a monster. The story however is founded upon a fact, which occurred in Italy, partially as represented, more than a century ago. I heard Paganini several times in Florence in the presence of the court and brilliant audiences, upon which he always produced the most extraordinary impression.

There is nothing more remarkable than the difference in the musical talent and passion of nations. The English are perhaps the most unmusical of civilized people. The French have more passion for music, but the national taste is a vicious one, and their language worse adapted to it than any other cultivated tongue. The Germans, with scarcely an exception, have a profound musical passion and they excel all other nations in instrumental skill. Their music is tender, romantic, rich and solemn. Mozart, Beethoven, Weber, and a host of others, are composers of unsurpassed excellence. But Italy is the very seat and throne of the musical empire. There, are found the greatest number of celebrated composers, and thence come nearly all the great singers. There must be something in the climate and air very favorable to the voice, for when impaired in other countries, it is often restored by a short residence in the mild region of Ausonia. Music, there, is a universal passion, and even the common people excel in it. I have often, in a moonlight night, followed groups of laborers, who were executing with fine taste, and admirable unison, passages from the popular operas. I shall never forget the agreeable surprise I once experienced upon entering a silk manufactory in the neighborhood of the royal residence of Caserta near Naples, at finding, perhaps a hundred neatly dressed peasant girls, seated in rows in a large airy hall, all singing at their work, in harmonious chorus, under the direction of a leader of their own sex. It was a most charming spectacle, and strongly expressive of the national taste and passion.

* Here sighs with lamentations and loud moans
Resounded through the air pierc'd by no star,
That e'en I wept at entering. Various tongues,
Horrible languages, outcries of woe,
Accents of anger, voices deep and hoarse
With hands together smote that swell'd the sounds
Made up a tumult, &c.

But I must stop, ere I have exhausted my subject, for fear of wearying my readers, if I have not done so already. These reminiscences must be pardoned for their vagueness and inaccuracy, as years have elapsed since the impressions were made, and I have no notes to aid my memory. I must also crave indulgence for any erroneous use of technical terms, into which I may have fallen, as I do not pretend to be a *connoisseur*.

J. L. M.

THE LAND FAR AWAY.

BY ELORA.

There are bright homes mid bowers of deathless glory,
There are blue skies o'erbending them in love;
Sweet winds that never sighed round ruins hoary,
Or sung the Autumn requiem of the grove.
There are fair flowers by crystal waters springing,
That never bore the semblance of decay,
On the soft air their perfumed incense flinging,
In a land far away!

There on the mountain tops, the day declining,
Hath never caused a twilight shade to rest!
Each height, an altar to Jehovah, shining
With sunlike brightness o'er the vallies blest.
And there are dwellers in those scenes of gladness,
O'er whose pure being death can have no way,
Whose voices utter not a note of sadness,
In a land far away!

Cherub and seraphim of glory, bending
With holy raptures at a throne of light;
Angels and saints their songs of triumph blending;
These are the dwellers in that region bright.
And some have walked with us the path of sorrow,
And felt the storms of many a wintry day;
But, oh! they wakened on a blissful morrow,
In a land far away!

And shall we weep for those to joy departed?
Or shall we mourn that they shall grieve no more?
Sick as we are, and sad and weary-hearted,
Shall we recall them from that blessed shore?
See where they dwell—the forms we loved and cherished;
From age, dim-eyed with hair of silver gray,
To the fair babe that like a blossom perished—
In a land far away!

Thou, best and dearest—ever-gentle mother,
Who soothed me in thy circling arms to rest,
Still the cries which would have vexed another,
By folding me with love upon thy breast—
Green o'er thy grave for years the long grass sighing,
Hath seemed to mourn above the mouldering clay,
But well I know thy spirit dwells undying,
In a land far away!

And He whose brightness suns and stars are veiling,
Whose form once seen would blind our mortal eyes—
With Him who bore unmoved the scoffers' railing,
And died to give us entrance to the skies—
Father and Son and ever-blessed Spirit,
There with their presence make eternal day!
Oh! glorious are the homes the good inherit
In a land far away!

Philadelphia, October, 1839.

TOUCHING TREES & TREE TOPICS.

"Noble placeant ante omnia sylva."—*Virgil*.

Since my last article was written, where can any one have lived in comfort, who had not trees to fly to for shelter, against such heats as have prevailed? Oakwood has been Eden all the while—Eden without a tempter: yet unlike the sacred garden, became decay-stricken, like every thing else decreed to man by Omnipotence. Even now we see around us, as we course through the wood-lanes, on our evening and morning rides, a crimson oak leaf here, and there a yellowing maple. But what delicious sun-sets, and what heaven-sent breezes come in with this change of season! And then the fruits,—that ripen by the same influences which make sere the foliage and gild the wavy corn-ribs,—the downy peach, the purple plum, the blushing nectarine, the crisp water-melon, and luscious cantelopo. Is it not true that Thomson, the seasons' poet, hath said,

"These are but the varied God?"

Come, then, at the springing, the verdant, or the falling leaf, and you shall have a welcome in these woods. What matters it when? What saith Pliny?

"Frutetis et arboribus dilapae folia."

And here, you can readily realize what he means. Yet is the fall only incipient as yet. The leaves dilapae but here and there; the leaf of the lemon-clingstone is yellowing faster than the fruitage, and more brown oak leaves fall than ripening acorns. The sycamore is early dying, and its foliage comes earthward with its loosening bark; the seed-vessels of the acacia grow daily a deeper brown, and the white stems of the slender birches shine more silverly among their yellow masses. Another month, and what wood-glory will be here! But I will not anticipate it. When the time comes, I will tell you of the gorgeous change; though I may see it painted in the forests of a more northern state. It will yet be the same in all its features: and Nature is Nature still, with all her thousand charms, view her where and when, and whence you may.

Two months only would I gladly spend in the city. I am not so sylvan as to eschew every thing urban, and forever. But I should sooner tire of town than country, and am of the mind of Tacitus in this: "*Nemora vero, (says he,) et luci, et secretum ipsum, tantam mihi affurunt voluptatem, ut inter precipuos carminum fructus numerem, quod nec in strepitu componuntur.*"

The forgetfulness of the noisy world, which the lover of retirement soon finds occasion to experience,—I mean the oblivion into which he, not the world, passes, when he secludes himself from the latter,—is with many a great bug-bear to scare him from the indulgence of a sylvan taste. He gains the greater good, however, who gives up the town, and, with Horace,

"Inter sylvas academi quaeret verum."

How beautiful Beattie expresses this preference, while choosing a spot for his last pillow!

"Let vanity adorn the marble tomb
With trophies, rhymes, and scutcheons of renown;

In the deep dungeon of some Gothic dome,
Where Night and Desolation ever frown!
Mine be the breezy hill that skirts the down,
Where a green grassy turf is all I crave,
With here and there a violet bestrawn,
Fast by a brook, or fountain's murmuring wave:
And many an evening sun shine sweetly on my grave!"

Virgil, in his second Georgick, has the same idea. Listen to the liquid flow of the language in which it is conveyed:

"Rura mihi et rigui placeant in vallibus amnes,
Flumina amem, sylvasque inglorias—
— Oh qui me gelidis in vallibus Hæmi
Sistat, et ingenti ramorum protegat umbrâ."

Sotheby has made four fine lines out of this,—but oh, how far short come they of the original! The "sylvasque inglorias," and "gelidis in vallibus Hæmi,"—where are they? Here is the translation:

"Oh may I yet, by fame forgotten, dwell
By gushing founts, wild woods, and shadowy dell!
Hide me, some god! where Hæmus' vales extend,
And boundless shade and solitude defend!"

But neither in foreign nor in mother tongue, neither in time of eld, nor by modern muse inspired, has any thing in this vein been written, like that which I am now about to transcribe, from a rare but rich old volume, (that I will not lend!) worth twice its weight in virgin gold. It is called "The Vow for Retirement," and is from the pen of Anne, Countess of Winchelsea, who lived late in the seventeenth century. This exquisite effusion was written in the year 1695.

"Grant me, O indulgent Fate!
Grant me yet, before I die,
A sweet, but absolute retreat,
'Mongst paths so lost, and trees so high,
That my unbroken liberty
Never may the world invade,
Through such windings, and such shade!
Here let there reign a soft twilight;
A something betwixt day and night;
Amid these thick-grown shades be found;
While here and there a piercing beam
Scatters faint sun-light on the ground,
Spangling with diamond-points the gloom around,
A holy, pleasing, melancholy gleam!
And never may the world invade
Through such windings and such shade!"

"Let no intruders hither come,
Who visit but to be from home,
None who their vain moments pass,
Only studious of their glass.
News, that charm to idle ears,
That false alarm to hopes and fears,
That common theme for every fop,
From the grave statesman to the shop,
In these coverts ne'er be spread,
Where the heart to peace is wed.
No, never let the world invade
Through such windings and such shade!"

"Courteous Fate! afford me there
A table spread without my care,

With what my garden can impart;
Whose cleanliness be all its art.
When of old, the kid was dress'd,
(Though to make an angel's feast,)
In the plain unstudied sauce,
Nor truffle nor morilla was,
Nor could the mighty patriarch's board,
One far-fetched ortolan afford.

Courteous Fate! nay, give me there
Only plain and wholesome fare:
Fruits may kindly Heaven bestow,
All that did in Eden grow;
All—but the forbidden tree,—
Would be coveted by me;
Grapes, with juices so crowded up,
As breaking through the native cup,
Figs, yet growing, candied o'er,
By the sun, a tempting store,
Cherries, with the downy peach,
All within my easy reach;
While, creeping near the humble ground,
Should the strawberry be found,
Springing wheresoe'er I stray'd
Through those windings and that shade.

"Give me there—since Heaven has shown
'Twas not good to be alone—

A partner suited to my mind,
Solitary, pleas'd, and kind;
Who, partially, may something see,
Preferred to all the world in me;
Slighting, by my noiseless side,
Fame and splendor, wealth and pride.
When but two the earth possess'd,
Then were happiest days and best;
Nor by business, nor by war,
Nor by aught that quiet mars,
From each other were they drawn;
But in some grove or flowery lawn,
Spent the swiftly-flying time;
Spent their own and Nature's prime,
In love—that only passion given,
To smoothe the rugged path to Heaven.
When comes, at length, the closing hour,
Here may it find us in this bower,
Without one anxious fear or sigh,
Pleas'd to live on—prepar'd to die;
And be the debt of nature paid
Amid these windings and this shade!"

I think you will agree with me that that is as good, at least, as the average of the original poetical contributions to the Southern Literary Messenger.

In my last article, I took occasion to describe to you the scathing of a fine old oak by lightning, in the immediate neighborhood of Oakwood. I had not then met with the following beautiful lines, or I should have given them as appropriate to the subject. They are from a pen accustomed to coarser work,—that of no greater and more respectable, and, at the same time, no less notorious, a personage, than old "Dennis the Critic," and were written in the year 1695. The idea is noble and admirably sustained.

"Ages had seen yon deep-scathed oaks remain,
The ornament and shelter of the plain:

With their aspiring heads they dared the sky;
While their huge arms the loud winds could defy:—
The tempest saw their strength, and, sighing, pass'd them by!
'Till Jove, unwilling they should more aspire,
Launched on their giant heads his forked fire,
Then, from their trunks, their mangled arms are torn,
And, from their tops, their scatter'd glories borne.
Now, on the heath, they blasted stand, and bare,
And swains, whom erst they sheltered, now they scare!"

Adieu, for another month!

Oakwood, Va., Sept. 1, 1836.

J. F. O.

THE CURSE OF THE FORSAKEN.

Go! and when o'er thy faithless heart,
Thou traitor to thy vows and me,
Joy flashes with a phantom's art,
Like lightnings on a raging sea—
Then turn and cast a burning thought
On her whose wrongs thy doom have wrought.

Forgive thee! yes! who stoops to hate
The viper that infests his path?
Its venom may our veins dilate,
But cannot swell our souls to wrath:
Thou wert the viper to my rest;
Thy fang—not malice—goads my breast.

Forgive thee! yes! but never can
Self pardon self, for yielding trust
To one whose semblance was of man,
But yet whose spirit was of dust;
Here!—take my pardon—let it fall,
The wormwood to thy cup of gall.

Forget thee! would I could forget!
Alas, oblivion has no stream,
Like storied Lethé, where to wet
The heart, and it from shame redeem:
It is, when woman once has fell,
Her curse to need no after hell.

But, thanks to memory's madd'ning torch,
The flame that mocks me with the past
Can pierce the future's misty porch,
And tells a doom for thee at last;
While God upholds in Heaven his sway,
Sin stalks not here a thornless way.

Go! seek oblivion's iron hand,
On earth's remotest shore—in vain!
Forever wilt thou bear the brand
That seared the heart and brow of Cain:
But Cain's remorse can never bow
The soul of one so hard as thou.

I will not die—but cherish life,
As vestals watched their holy flame,
Till it shall soothe my frenzied strife
To see mine buried in thy shame:
Then sink—'twill be the sting of hell
That we *together* there must dwell.

Camden, S. C.

MEMORY.

ADDRESSED TO STUDENTS.

Memoria excolendo agetur.

In limine, we beg of the youthful reader of the Messenger, who for the sake of pleasure rambles through its pages, which like a pleasant *parterre* are strown with the choicest flowers of literature, not to start back from the perusal of this article under the apprehension that it is to be very analytical or metaphysical; on the contrary, even if we were endowed with the power of analysis, we would, for the sake of utility, make our observations of a practical character.

We are no advocates of a *born* equality of mind, or rather, in more correct language, as we think, of an equality of mental susceptibility at *birth*, chiefly because we never yet saw a mother who believed it, and her opinion is entitled to as much weight, as that of the mere speculative philosopher, since she is capable of letting herself down, of becoming herself once more a child, for the purpose of conversing with and amusing the nascent mind of the infant prattler. The *senses* are the conductors of ideas to the mind, and without their existence there could be no ideas; but the senses do not act until birth; therefore anterior to birth there is no mind, or rather no ideas as yet impressed upon it, and as the major includes the minor, or the whole the part, of course no memory; but the inference that is sometimes drawn from this, that every infant starts in life with a mental apparatus equally qualified for success, and that with the same system of culture it will always remain the same in every individual, is not a fair inference, for each individual may commence his education with a different degree of susceptibility, and it is immaterial to our purpose whether this difference dates its existence anterior to, at, or subsequent to birth. Dr. Franklin and others, have compared the mind, before the reception of ideas, to a *blank* piece of paper; now, it is evident that one individual may have a broader sheet or tablet than another, or, to use the technical language of the printers' art, one may have a more *receptive*, another a more *tenacious* paper. Again, in farther illustration, take two measures, one a bushel and the other a half bushel measure, both empty; though they be *empty*, they are nevertheless measures, and no person will say that because they are empty, they have the same *capacity*.

However strong the argument may be against any existence, or at least any exercise of mind before birth, it applies with still stronger force to the memory, for memory relates to things past, and implies experience: how then can there be a memory of that which has been neither heard, seen, touched, tasted nor smelt? There seems also to be less disparity in the susceptibility or capability of memory, in different individuals, than in any other mental function; this appears probable from its very great degree of *teachableness*, its quality of receiving *mechanical* or *arbitrary* help, which indicate that it is less dependent on original constitution for excellence, than its sister functions of mind. It is related of Woodfall, the publisher of the Letters of Junius, that about the last quarter of the eighteenth century, he reported the speeches delivered in the Bri-

tish Parliament, from memory only. Mere auditors have frequently been known to repeat correctly from memory long speeches, some time after they had heard them. In Germany, a young Jew has brought his memory to such a degree of excellence, that he is now astonishing several of the European capitals by reciting from it the seven folio volumes of the Talmud, from beginning to end, and afterwards from end to beginning. Indeed, whatever may be the speculations of mankind on this subject, they *act* as if they believed the truth inferred from the preceding paragraph, for whilst they resent, as an insulting imputation, any reflection on their *other* mental powers, because it would imply that God had given them less of these qualities than to other men, they not only receive good humoredly any impeachment of their memory, but even sometimes take a delight in railing against it themselves. We infer from the premises, that if memory do not exist anterior to birth; if the degree of its susceptibility or impressibility be the same or nearly the same in different individuals; if it be *docile* beyond the other faculties, no person need despair of making his memory all that is desirable.

We now proceed to vindicate the dignity and importance of memory in the intellectual system. It is not our intention to resolve all or several of the components of mind into memory, but adopting the admitted truth that all the divisions of the states of which mind is capable, are closely connected with and dependent upon each other, to show that if it be not the foundation stone, or the sustaining arch, it is something more than an embellishment of the mental fabric, and as such can not be neglected without greatly weakening that reciprocal and blended strength and beauty which the several parts receive from each other. The prejudices against the importance of memory, and even the belief that a high degree of it is inconsistent with the strength of the kindred faculties, are not confined to the ignorant, but have sometimes made their appearance in books of merit. The wise ancients thought not thus. They made Mnemosyne, or Memory, the mother of the Nine Muses, or the arts, of which they are the presiding deities—the severe one of history, the stately one of the epic, the laughing one of comedy, and the weeping one of tragedy.

Felicesque vocat pariter studuq; locique
Mnemonidas. *Ovid, Lib. V., Fæb. IV.*

Plato seems to make all knowledge consist in remembrance, and Diodorus Siculus ascribes to memory the art of reasoning. An examination of the process of ratiocination will show that there is some truth as well as poetry in this latter opinion, viz: the reasoner proposes to prove something which is commonly distant from his premises, and to do it by a series of arguments, which, as they are mutually connected and dependent, are compared to the links of a chain. The danger is, that, in the ardor or confusion of the process, he may omit, transpose, or repeat some of the links; from this nothing can protect him but memory, which sits by, a faithful prompter, and preserves to him the collocation which he has elaborated in his closet, or other circumstances of leisure.

If memory be so necessary to the mathematical or philosophical inquirer, it is still more so to the orator;

for, besides its use in eliminating his argument, it has to him still additional and important uses. Reason, stern and severe, perhaps acts the more important part: she presides at the helm; but memory stands by, a faithful servitor, and hands over to her the stubborn statistics, the apposite quotation, and beautiful allusion; she never deserts her post, not even when he is in the most inflamed state of feeling or highest degree of mental exaltation, of which his mind is capable. She kindles and strengthens with the orator's rising ardor, until she seems to embrace upon her chart the whole broad expanse of the past; and, gathering up almost in one moment of inspiration the garnered wisdom of more than six thousand years of experience, she presents it, to be wielded in the cause of truth and justice. Hence it is evident that of two orators, *ceteris paribus*, the one who has the readier and better stored memory, will possess an immense advantage. Innumerable examples might be adduced illustrative of this position; we will, however, only refer to the case of an ex-president of the United States, who frequently overthrows a finely constructed argument, or breaks the force of an eloquent appeal, by the quotation of a formidable array of authorities and stubborn facts from that inexhaustible treasury—his memory.

It is a thought which we do not remember to have seen prominently set forth, and one which may aid us in placing a proper estimate upon this noble faculty, that it snatches from annihilation one third of the domain of time—the *past*; but for it, we should be left with the unsatisfying present, and the inexorable future. It is to this wonderful capability of the human mind, that we are indebted for whatever of wisdom or warning, virtue or valor, is afforded in the history of the *past*, and which without it would have perished in the very moment of their exertion. In vain for us, would the inspired bard of "Scio's rocky isle" have arranged his thoughts in beauty, and uttered them in music—in vain would the noble Socrates, the ken of whose mind almost supplied the want of revelation, have invited us to virtue by his matchless colloquial eloquence, and the sweetly attractive current of his life—in vain for us, would the first Brutus, standing over the corpse of beauty and chastity, for his altar, have uttered the first vow, and struck the first blow for rational and regulated liberty—if tradition, the dependent offspring, or rather another name for memory, had not preserved the recollection of these events, until a writer arose, received the precious charge, and bequeathed it, in perpetuity of possession, to all coming time. But for this conversion, this reproduction of the past, for the wants of the present, it is evident we should be condemned to a stationary state; but by its help, each succeeding generation stands upon the heads of the preceding, and by the elevation of their station command a more extended horizon, and see as much farther down the stream of time, as the one is higher than the other. As the means of preserving materials for history, are so abundant at the *present* day, in exhibiting the connection between tradition and memory, it is not intended to claim for the former, that degree of importance which it had in the *infancy* of society, when it was the most common and useful source of history. In tracing out this connection, it is hoped we have avoided the inference of perfect identity of the two. There seem to be several circum-

stances which distinguish them. Memory relates to *individuals*, tradition to the aggregation of mankind into generations—there can be memory without tradition, but no tradition without memory. In nations destitute of the means of preserving records, the memory of one generation, handed down to the succeeding, becomes tradition.

Memory assumes no less importance, considered in its connection with experience. Such is the high estimate placed upon this mental possession, that it has been called the mother of wisdom. We define experience to be the memory of past occurrences, mixed with that power of turning them to advantage, which arises from a careful observation and collation of them. This power of careful observation and comparison is wanting in many persons—from which it would appear that there may be memory without experience, but no experience without memory.

If the young enthusiast after knowledge, has accompanied us thus far, we hope that, like ourselves, he has been impressed with a desire to improve this noble faculty. Obviously the best mode of improving the memory, is by properly exercising the attention, on which it mainly depends, and the strong or weak exertion of which accounts for the various degrees of memory which we observe in different individuals, rather than any difference of susceptibility at birth. When we hear that everlasting complaint of the young, "I have a bad memory—I have no inducement to study any thing, for I cannot remember it," we are apt to inquire into their habits of attention—which inquiry commonly results in the knowledge, that attention is considered as an affection of the mind, that is scarcely worthy of education.

We will now, after the fashion of nostrum venders, give a sovereign recipe for the formation of a good memory, and the cure of a bad one:—Direct the attention upon the beginning, and continue it throughout the delivery of every sermon, speech, lecture, and recitation, made in your presence, however abstruse the subject, or dull and uninteresting its expounder. It is objected that a discourse of the nature supposed in the apodixis of the foregoing sentence, produces an insupportable irksomeness; well, we do from the bottom of our heart pity the luckless wight who is doomed to the merciless infliction of some articulate savage, who redeems his cruelty with no perspicuity of reasoning, no eloquence of diction, no flash of fancy, or sparkling of wit. But into such bloody hands every one is liable to fall, and is not compliance with the advice just given the best salve? For when the mind is closely engaged in the subject, it cannot suffer greatly, whatever may be the faults of him who handles it; besides, *perseverance* in the course recommended, gradually diminishes the necessity of painful effort, until it results into habit of attention; and it is to us one of the kindest arrangements of the benevolent Being, that our habits beguile much of our toil and minister to our virtuous pleasures. Labor *ipse voluptas*. Authorities, no less than reason, sustain the views taken of attention. Many of the luminaries of the world have left it on record for the benefit of youth, that much of the superiority which is attributed to genius, belongs to a proper exercise of the power of attention. The mind of the man who has acquired the power of fixing it at all times and places, and under all

circumstances, never flags—it becomes the slave of the possessor; let him will it any particular duty, and the performance easily follows the act of volition. With such a mind, he can turn his thoughts inward, concentrate his ideas, shut out the external world, or, at least be but little affected by its distractions, marshal his powers for action, and bring them to bear like a Macedonian phalanx upon the positions of his adversary. There is no error more common or injurious than this of the young student, who supposes that when he has prepared the subject of a recitation or lecture, he has no farther interest in giving his attention to the instructor in his elucidation of it to others. Hence results the inability in after life to accompany a close piece of reasoning through all its stages, and a wretched imbecility and servile dependence of mind. It follows from the rule just given, that all translations and high cuts to the lesson must be avoided, since these render close and long continued attention unnecessary.

The connection of several of the states of the mind with memory, and their partial dependence upon it, have been traced. We will now close with a few observations upon the *pleasures* of memory, and, under this head, its connection with some of the *moral* emotions will be pointed out. The exercise of *conscience* implies a recollection of our past acts, with a feeling of approval or disapproval of them, in proportion as they are conformable or unconformable to the standard of right: how then could there be this review and judgment upon our past acts, if they found no abiding place in the memory? If they did not, we could not preserve the "*mens conscia sibi recti*," which, as a good angel, enables a man to bear up under the abandonment of friends and fortune, the impeachment of his motives, and the assault of his character. This is the only reward which thousands of the unappreciated and unrequited virtuous ever obtain. The bad man considers it a poor remuneration, but it is a richer possession than Alexander or Bonaparte ever knew, since the resulting happiness is extended through this life and renewed in eternity. It is true, another office of conscience is prospective in its operation, as when we say, "my conscience will not let me do so and so." But still this enlightenment of conscience, which enables us to decide correctly on the propriety or impropriety of a contemplated action, has been taught or at least improved by the feeling of condemnation or approbation consequent on our past acts: *ex. gra.* a money lender lends a sum for *usury*, without any conviction of impropriety at the time; but a sense of guilt *subsequently* arises; and when a proposition is again made to lend money on similar terms, his conscience, as men say, will not let him do it. In this restraining conscience, nothing more is discerned than a painful *recollection* of the first transaction acting on his virtuous sensibilities.

Gratitude, the least alloyed of human virtues, equally with conscience, seems to have a dependant connection with memory. Indeed, gratitude has been beautifully called the *memory of the heart*; but, in more correct language, it is a vivid recollection of past kindness, with an emotion of love to its author, as its consequent. It is memory, then, which preserves this heavenly, pure feeling—frequently the only requital which the destitute can make to the clother of his nakedness, the feeder of his hunger, and the enlightener of his

ignorance. But for this the recipient might be depressed by an overwhelming sense of the irrepayable weight of his obligation; but with this emotion gushing in perennial streams from the fountains of the heart, he feels that he is not altogether unworthy or destitute of every power of requital. A good man will never desire any other reward for his alms, and thus it is that charity bleaseth him who gives and him who takes.

The pleasures of *hope* have often been analyzed by the philosopher and sung by the poet, whilst the more chastened and unobtrusive pleasures of memory have seldom been a theme; but hope was not the only boon that remained behind in Pandora's box: the domain of memory—the past—is more emphatically ours, than that of hope—the future.

Who that is contending with a slanderous and envious world, does not feel that it is his purest pleasure to send his mind back along the track which he has thus far described in his pilgrimage? In this retrospective journey, each retraced step shows more lovely and bright than the position which has just been left; all along the path of retrogression arises some remembered and innocent joy, until the mental traveller arrives at the only elysium known on earth—the virtuous home of childhood. Here then the weary wrestler has arrived at a point, when love and hatred and ambition had never agitated his breast—nor selfishness and deception poisoned his philanthropy—when he scarcely suspected the existence of vice in the world, because he found none in his own home. Here he fondly but dimly calls up the beloved forms of the hoary sire—the care-worn mother—the laughing sister, and the fond brother. None but he who is incapable of such a retrospection dare say, that memory is not a friend to virtue, and, therefore, to happiness. Even the recollection of those sad events, which have been engraven on our mental tablets with the *iron stylus of affliction*, is softened and mellowed by the lapse of time, as distance of space takes away from objects their rugged points and revolting features. Of all our mental faculties, it is probable, that we shall carry memory with us in the greatest perfection into the eternal world. Hope will be swallowed up in fruition—for, how can there be any hope where such is the fulness of glory and happiness that nothing is left to be desired? We have imagined that, when this earth shall have been rendered once more without form and void, the beatified spirit will delight, by the help of memory, to revisit the scene of its probation, remembering each drop of water that it put to the parched lip, and each wanderer that it pointed to the road of bliss.—*Hæc olim meminisse juvabit.*

University of North Carolina.

SOLITUDE.

I know not why I often feel
A pang of lonely sadness steal
Into my heart, 'midst crowds and mirth,
And then I feel alone on earth—
As if there were no sympathy
In any, breathing life, for me;
Then quick the unbidden tear-drops spring
Forth from the source such feelings wring,
Until I force them back again,

And bind them in their sad domain;
And strive to wear a smiling mein,
From careless eyes my grief to screen.
I look around and see no trace
Of care on others' brow, or face;
They all confide in some loved heart;
Their vows are pledged "till death shall part."
And they are happy—for they know,
Should sorrow come, or want, or wo,
To tried affection they may cling,
Which draws from grief its fatal sting;
Their tenderness can banish care,
And sunshine bring e'en to despair.
But, there are none whom I can cheer,
None who for me would shed a tear.
I meet with civil words and smiles,
But little these the heart beguiles.
I may not meet the truth and love,
Which nobler natures only prove;
And though such thoughts I strive to flee,
Alone my heart must ever be.
But oft I chide this selfish mood,
So framed of dark ingratitude,
And though by sympathy unblest,
I strive to feel—not feign—at rest—
Yet oft the thought will still return,
"No heart to thine shall ever yearn—
No sympathetic love be known!"
And then I weep—alone—alone.

Tennessee, Nov. 1, 1838.

THE EMIGRANT TO HIMSELF.

I left my native land to toil for gold,
And I have won it. Years have o'er me fled,
And never more on earth sha! I behold
Some that I loved, yet *left!* for they are dead!
It was not mine to hear the last request,
In the faint murmurs of their dying breath;
With one fond parting farewell to the blessed,
Or with my presence soothe their bed of death.
And years are lost to me, with those who live,
Of sweet communion. Is the voice I heard
In childhood's happy days, no more to give
Its music to my ear, even in one word?
My own loved brother! are our sports forgot?
Those sports our infancy and manhood shared:
I view with memory's eye each well-known spot,
By thoughts of thee and of thy love endeared.
I had no feeling which thou didst not know;
Love, anger, joy, unfolded were to thee;
In the same channel did our wishes flow—
Dost thou recall all this in thoughts of me?
Vast plains and pathless forests part us now:
Thy children know me not—my hand, the chain
Of intercourse hath broken. Man may bow
At fortune's shrine for bliss, but all in vain.
Can wealth repay me all I left behind?
Friends, brothers, sisters—every hallowed tie
That life first knows, when the young heart and mind
Are warm with hopes, the ardent and the high?
It cannot—would it might! for I am gray,
And time none again recall. My parents lie

Where the green willows weep, far, far away ;
 And there would I breathe forth my latest sigh.
 But here—with few of those I love, to pour
 The tears of sorrow on my lonely tomb—
 Here must I die, for wealth can ne'er restore
 Young years, nor can it gild the spirit's gloom.
 It cannot bring again lost social hours ;
 The heart's best treasures—friendship, love and truth ;
 It cannot soothe one grief that may be ours,
 Or give us back one blessing of our youth.

Thus mused the emigrant, as twilight's shades
 Fell o'er his wide domain. Around his heart
 Sad images had gathered—thoughts of some
 Long, long unseen, now sleeping where no sigh
 Or tear is their's—within the quiet tomb !
 And some still left in life, whose smiles no more
 Shall beam for him. Health is not now his own,
 And weary travel he may not endure.
 Beside him, silent sat his pensive wife,
 With head reclined and gazing on the skies.
 Thoughts throng her mind of bright and early days ;
 Of friends and kindred she can ne'er forget—
No golden idols fill their place to her.

E. A. S.

November, 1838.

LITERATURE OF VIRGINIA.

TO PROFESSOR TUCKER OF THE UNIVERSITY.

The caption of this letter has been assumed, not because the writer cherishes invidious feelings towards the northern or eastern section of the United States. He rejoices, that letters have been cultivated on the banks of the Hudson, and that Irving, Paulding, and Sands, have anticipated the southern people in elevating the mental character of their country, both at home and abroad. The works of Channing and Mrs. Sigourney, have met with some measure of approbation, even from English critics ; and whilst writers in foreign countries have welcomed their productions, it is not probable that in any part of America, such productions would be received with disdain. Nor is it my intention to exclude from our warmest wishes, those portions of the country which may lie more to the south than Virginia. We are sensible of the fact, that Dr. Ramsay devoted his life not only to condensing information contained in voluminous writers, but partially to original works in historical literature. The intellectual character of Grimke was one which the writer esteemed, and the conductors of the Southern Review will not soon be surpassed in erudition. The parliamentary speakers of South Carolina have been equalled only by men of the first order, and her soldiers were early in the field when our independence was to be achieved. The question then can be promptly answered, why a title to this letter has been fixed on, so sectional in its nature. It has been chosen for no other purpose than to give distinctness to our views, to prevent needless details, and to keep steadily in sight the object at which we aim. With these preliminary remarks, permit me, respectfully, to engage your attention for a few minutes on the illustration of the following points :

1st. Has Virginia such a literature as she is under obligations to possess ?

2d. Are the means within her reach, of improving her indigenous literature ?

3d. Would the benefits of literature repay her for the time and expense which would be involved in its attainment ?

On the first question, the position is assumed that the State is under obligations to possess a literature of the highest grade ; and upon this assumption the question must be answered in the negative. However mortifying the confession, truth declares that we have no such literature. When assaulted by foreign critics, we might be induced to soften the asperity of their representations by any circumstances that might serve to extenuate our negligence ; but among ourselves it is noble to acknowledge our short-comings. It is not intended, however, to say—that mind has not been active in this State—that beneficent works and useful schemes have not been undertaken by its influence—that jurisprudence has not been studied—that the heights of political wisdom have not been scaled—that every department of professional life has not been respectably filled—that academies, colleges, and universities, have not been founded and endowed. These statements are capable of proof, and not one in the sisterhood of our confederacy has excelled Virginia in legal acquirement, in political tact, or in forensic or pulpit eloquence. We are evidently in the first stages of literary effort, and large calculations may be made, and sanguine hopes may be indulged, from the fact that we have begun to disperse widely the elements of education. But, at the present, nothing can be more easily demonstrated than the position assumed ; for we assert, without the danger of being contradicted, that there is not in existence a history of Virginia worthy of the name. It is true that "Smith's History," is interesting to all who like to contemplate an infant colony, or courage, when brought into contact with savage borders, or adventure and enterprise equal to any in the annals of chivalry. Its minute and topographical descriptions are valuable ; but important events have transpired in two hundred years, to which justice has not yet been done. The same estimate in some respects will apply to Stith, Beverley, and Burk, each of whom undertook a record of events which had taken place in our State. The documents furnished by Marshall are truly valuable ; but as the Chief Justice was without doubt the most eminent jurist in America, it could scarcely be expected that he should have been at the same time the most conspicuous historian. But it has been said, that the historians have done all that lay in their power with the events ; and that when imposing events shall be furnished, they will be recorded in an imposing way. That august actions serve to inspire the writer who is employed in their contemplation, we hold to be self-evident ; nor is it possible that events, diminutive in themselves, can become great by the manner in which they are represented. It is the province of the essayist to play with those on-dits which so often ruffle a superficial society, to depict the caprices of fashion, and to catch the lights and shades which glide over the manners of the people. But the pencil of the historian encircles the commonwealth, and finds distant causes at work among diversified passions, whilst the causes and

the consequences demand dignity of description. Is it then reduced to a certainty, that our commonwealth is totally destitute of materials suited to one of those glowing historical memorials, from the perusal of which our legislators, jurists, and planters, might rise with augmented wisdom? So far from this, we seriously doubt whether Livy, in describing the foundations of Rome, was possessed of materials better adapted to history, than those which have long been inviting the attention of our men of letters. Our origin is not obscure. We are not dependent on marvellous circumstances to excite the wonder of the multitude. It demands no credulity from the people; but, as the Indians believed that the Spaniards who first visited this continent, came from the sun, so our origin, historically speaking, is transparent as the light. Our settlement here is interwoven with the history of England; but no writer of Virginia has ever explored with minuteness the causes, which were at work in the parent country to produce the colonization of America. But though the connection between England and Virginia be so intimate, it is clear that no one but a native of our soil would be competent to write our annals. The face of the country is different. The modes of society—our domestic relations—our civic arrangements—our language, and our laws, though derived from England, have been modified by circumstances which have introduced a contrast. But especially in treating of those events in which we were brought into conflict with the mother country, we could not look for impartiality from any historian whose mind was biased by foreign political institutions. Ex-president Jefferson was of opinion that Botta's History of the Revolution was the best which had been written. Botta certainly adopted the classical writers in this department as his models, and he admired the Italian republics; but his style is remarkably irksome. But allowing this to be the best record yet given of the revolution, this by no means proves it to be the best which may be given, or which ought to be given. The field of competition is still open, and that Virginian will deserve the laurel crown who shall first celebrate the national deeds of which our State was the cradle, in that kind of melodious language which the muse of history is wont to inspire. He will deserve a plaudit as warm as patriotism has power to utter, who will display, in its true lights, the character of James I. of England, of Powhatan, of Opechancanough, and Pocahontas. That females have filled a large space in history, is evident from the bare mention of Zenobia, Boadicea, Cleopatra, Christina, Elizabeth, Mary Queen of Scots, the Maid of Orleans, and Lady Jane Grey. Some of these individuals, however, have been stained with crimes at which the heart revolts. But a purer and more disinterested character does not exist in history, than our own Indian princess; and to her benignity we are indebted for those broad lands which we occupy—for those rivers on which are seated the marts of our commerce—and for those homes which are chained in serene captivity to mountains, which were once the barriers of her own imperial principality. But it is not my intention so much to descant on the variety of our materials, as to remark that those materials are at present in an immature state. In the same crude condition, precisely, were the facts and documents which relate to the discovery of America, until Irving

collated and arranged them, and threw over them the fascination of his style. The author of the British Spy contemplated at one time the preparing of a Virginia Plutarch. This work, though biographical, would, from the lives of those entitled to a place in it, have partaken very much of the nature of a political history. And, indeed, from the present attitude of things in our State, it is to be feared that some time will elapse before politics and literature will be divorced. We mean to say that politicians may, to some partial extent, be men of letters; but that there is no necessity why men of letters should desecrate their calling by becoming politicians. The talent displayed in the "Letters of Curtius" might have been turned to an important account, in some other department than politics; but, in that department, the feelings of the author became absorbed in the ardor and exaggeration of the partisan. Politics are so much in vogue among us, that if an individual is to be chosen, on any occasion, to address our colleges or universities, the uniform inquiry is, has he been a member of congress, or a foreign ambassador, or a secretary of state? If so, he will answer our purpose exactly; when, at the same time, the retired scholar who makes academical learning an object of generous pursuit, might be much more apt to confer honor on the institution to which the appointing power appertains. We further take occasion to say, that in our colleges belles-lettres chairs are either not founded, or, if founded, are considered as subordinate to those of political economy. The object of the belles-lettres, however, is not to reduce strong sense, but to give it the amount of polish which it may be able to sustain, and to adapt the style of mental execution to that field of intellect, in which we may be called to act, whether parliamentary, or forensic, or in ecclesiastical and popular assemblies. Goldsmith has remarked of himself, that his taste was literary rather than scientific; but this statement may be reversed in application to Virginia, for hitherto our taste has been utilitarian rather than ornamental. It is a question, however, whether we have thought sufficiently of the various uses to which elegant literature may be applied. We are aware, that many have spoken in disparaging terms of this species of attainment, and no one more contemptuously than the late Robert Hall of England. As a counterpoise, however, to such distinguished authority, permit me to say that the mind of Hall was decidedly classical and mathematical. He could not, therefore, be a competent judge, because he was a stranger to that luxuriant literature which arose out of the middle ages. In this department he was satisfied with gleanings, and cannot, for this reason, be ranked among sturdy reapers. His opinions, consequently, are of no more account than the opinions of any other would be, about the complex figures and the beautiful diagrams of the mathematics, who had never advanced beyond the knowledge of fractions. Polite literature is not at all inferior to science, in the point of its infinitude. It has a multitude of vales—the flowers of which wave in the inspiration of the muses—and a multitude of heights, on which imagination is burning at all times its fragrant and inexhaustible incense.

It would be needless to prosecute inquiry into other departments of our literature. If history has not advanced beyond the simplest annals, it is not probable that other branches have been more extensively or success-

fully pursued. It is nothing but justice, however, to say that several works have been written by Virginians, which have no special connection with the State. "Lee's Memoirs of the War in the Southern Department," can interest Virginia very little more than as she is a member of our confederacy. Had it been left in a finished form, it is certain that "Lee's Life of Napoleon," would have been the best work of the kind ever written by a Virginian. Your views and mine coincide precisely in the estimate you have given of this history, in your treatise on "American Literature;" but the work is disfigured by attempts to seek points of unessential discrepancy with Sir Walter Scott. It would seem as if he thought that the baronet stood in his way, and that it was necessary to kill him, on the same principle that some Indian chief must be sacrificed, that his antagonist may become possessed of the ornaments which made his rival so conspicuous. But Henry Lee was not the man to fall heir to the mental wealth of Sir Walter Scott. In his controversy with ex-president Jefferson we can overlook acrimony, because it seems to be an ingredient in political excitement; but in literature it is important to keep clear of feuds. The feuds between Pope and Addison, Byron, Bowles, and Southey, have created a blemish in their lives. But in these remarks let no one indulge the suspicion that we intend to depreciate Virginia. She has been the parent of great men. The qualities of Lycurgus and Alfred were more than combined in the father of this country—and we have seen Sir Matthew Hale in the person of Chief Justice Marshall—and the sage of Montpelier may well be compared with any of the ancient lawgivers. But it is in vain we inquire for our Miltons, and Baccans, and Spensers, and Johnsons, and Addisons, and Petrarchas, and Dantes.

"We may call spirits from the vasty deep—
But will they come when you do call for them?"

They will not—and the reason is obvious, because they have never been here; and illustrious shades are not accustomed to appear even under the spells of the imagination, unless they come to receive the award bestowed by posterity on their works. It must be conceded, however, that the people of Virginia have had a huge wilderness to reclaim, and men are not apt to betake themselves to refined pursuits, whilst engaged in executing works of utility. Two centuries ago, and that which is now Virginia was the land of Powhatan. Between our colonization and the present time has intervened the revolution, which agitated to an unusual degree the minds of men. This was a period in which philosophical and literary leisure yielded to that gigantic action which was necessary, before glades could be hewed out in the wilderness, to be filled by the large and brilliant forms of civil, political, and religious liberty. But in relation to our literature, the prospect may be more pleasing than the retrospect.

We shall proceed to a few suggestions on the second interrogatory: Has Virginia the means within her reach of improving her indigenous literature? To this question we shall return an affirmative answer. The Virginians have hitherto been lovers of English literature, and it was perfectly natural that their taste should have taken this direction. English history, jurisprudence, politics and manners, have been subjects of study

for more than two centuries. The influence of Hume has been astonishing in forming the opinions of young men, especially barristers, throughout this State; and this is the more to be wondered at, when we recollect that republican views of government have been universal. It has arisen doubtless from a predilection for every thing appertaining to the country from which we have so legitimately derived our descent. Attempts have been made to introduce a preference for the authors of France; but they have pre-eminently failed. The English literature is easy of attainment; it is highly cornucopian in its nature, and blends itself naturally with all our mental associations. And if we must relinquish the hope of raising a literature of our own, we know of no country that could supply us with better models than England. There are gaps in the line of her kings, but there are none in the line of her poets; and the muses were more propitious when Cromwell ruled, than when Alfred reigned. Then Milton presided over the national lyre; and from the volume of melody which his hand dispersed among the nations, eventually descended the form of freedom to ransom in our deserts the captives of the English monarchy. As Virginians, we care but little for the vulgar greatness of any English king; but we cherish a filial reverence for England, because she has been the mother of arts, of law, of learning, of statesmen, philosophers, and poets. It would be superfluous to speak of her philosophers, and what they have accomplished—or of her statesmen, and of that wide arena on which they have so often contended; or of her artists, and those productions which they have suspended in the gallery of the world. The fountain of poetry excavated by Chaucer, and colored with Italian hues, has flowed among all her shires, gladdening her obscurest hamlets, and ennobling her imperial cities. But the perfection of English literature should not divert attention from the incipient state of our own, and to that point we will return.

It has been made a question, whether men of letters ought to select subjects at home or subjects abroad. At first, Milton thought that his own country would have yielded him a theme for that song which he had promised to distant ages, but the muses overruled his determination. They saw, that even the best materials of English history could furnish no foundation broad enough to sustain the superstructure he designed to rear. For this reason they transferred his meditations to the vicinity of the Persian gulf, where they opened to his footsteps the leaved gates of Eden, and there he completed a picture, to the perfection of which the world contributed its multitude of rural sights.

It is one of the fables of antiquity that the city of Thebes, from rude materials, was charmed into proportion by the lyre of Orpheus; but it is no fable, that from the leaves and herbs, the rills and minerals of Eden, Milton reared a temple in which innocence might worship. Among the elementary disclosures of the book of Genesis, his imagination planted its watch-tower; and he drew around him the rarest objects to augment the beauty of Paradise. Every rural sound known to the ear of earth, murmured among the chords of his harp; whilst before the tide of its glowing eloquence, all trees and herbs became warm with animation. The plants that shiver in the Arctic zone were obedient to its call, as well as those gorgeous flowers

with which the sun enwreaths the waist of our world. It is equally certain, that Camoens and Tasso sought distant materials for the structure of their immortal works. But then the human mind had taken an oriental direction in consequence of the crusades; and the imagination of the poet saw camels winding in the meadows of the west, and Persian gazelles ranging in English parks, and the palm-tree surmounting the oaks of Britain. In consequence of the commercial intercourse of nations, it is scarcely possible to settle any standard on this subject; but one thing is certain, that all distant materials lie as near to the imagination of the Virginian, as to that of the Briton, the Frank, or the Italian. There is, however, a species of home-literature, which is highly to be valued, though it may descend from that epic heaven, to which we are elevated by Milton, Camoens and Dante. In this kind, the English Parnassus is redolent from the Canterbury Tales of Chaucer, to the Task of Cowper; whilst this long, intervening space, is filled with specimens too numerous to be mentioned. The wits in the reign of Queen Anne, for the most part, chose their materials on English ground, and many are the pictures of English life, which they executed, in that familiar style, of which Addison was the Coryphæus. Virginia has received, with a smile of approbation, all those works which have a reference to her own scenery, manners, or institutions. This is true of "Jefferson's Notes;" for that work, with the exception of its religious views, contributed to the popularity of its author in the state. It is true of the "British Spy," and of the "Old Bachelor," and of the "Life of Patrick Henry." It is true of "Swallow Barn," of "Letters from the South," of the "Mountaineer," of "George Balcombe," and of the writings of President Dew. It is true of the Southern Literary Messenger, and of many other productions. It is pre-eminently true of the ballad entitled "The Waggoner," which, in the judgment of the writer, is the best piece of poetry ever written south of the Potomac. There is in it a graphic power, and a cheerful, contented, and buoyant gaiety, which Wordsworth would not disdain to own. It is to be remarked, however, that Wirt was unequal in his performances, and the difference arose from the mixed nature of his pursuits. His *Spy*, constituted him the father of polite literature in Virginia. We may say of him what Johnson said of Gray—had he always written thus, he might have bade defiance to criticism. This charming work is Virginian in its structure. But in the *Life of Henry*, his attempts to vindicate the title of the orator to greatness, have led many to doubt that greatness who never disputed it before. The defect of the work lies in the glare of the words, and in the confusion of its figures. We cannot help believing, from the success which attended the *Spy*, that Virginia is admirably adapted to the production of that domestic literature which corresponds with a comparatively infant state of society. The seclusion in which many of her inhabitants live—the rites of hospitality so generously exercised—English customs still lingering in our homes—the fidelity of our servants—are enough to inspire Irving to depict scenes like those in his "Bracebridge Hall." Men may become tired of epic grandeur, but there is no sense of weariness in this kind of literature. The descriptions of life and manners in the works of Ramsay, are as fresh as ever to the native of

Scotland; and such a literature may be formed among us as rapidly as among the people of North Britain. In history, Hume, Robertson and Russell, simultaneously appeared; in philosophy, Reid, Stuart, Beattie, and Brown; in poetry, Grahame, Burns, and the Ettrick Shepherd; and, in fiction, McKenzie, Wilson and Sir Walter Scott.

If the face of a country has any influence in the formation of taste, then Virginia has a right to look for this quality in her children: for, where shall we find more natural curiosities or such redundant scenery as lies along the Blue Ridge. That mountain seems always as if it were a long drawn line of poetry, which the Creator had inserted into the otherwise prosaic volume of the State. Our climate, too, is soft as the most sensitive could demand. We are aware of its being a disputed point whether climate has much effect on literature. The question might be argued abstractly; but an appeal to facts would warrant the belief that its influence is but slight. Sismondi has traced the flight of the muses from the Mondego to the Ægean sea; but the Russian poets have excelled all others in sublime views of the Deity. Plutarch, Pindar, and Epaminondas, rose from among the mists of Bœotia. Literature has opened its wells to the peasants of Iceland, as well as to the caravans of Arabia. The haunts of the muses have embraced the extremes of heat and cold, from the Arctic to the Antarctic circle; but if there be any advantage in climate, then ours is not one

"Where genius sickens, and where fancy dies."

It is probable, that our literary men will be obliged to draw some portion of their materials from those Indian tribes that had pre-occupancy here before 1607. The "Last of the Mohicans," by Cooper, "Traits of the Aborigines," by Mrs. Sigourney, and "Yamoyden," by Sands, are works founded on our connection with these tribes. Southey, at one time, gave us the promise of making our country the scene of a work; but as he has outlived all his republican notions, it is probable that we shall not be honored by his muse. Campbell, however, has more than supplied the desideratum, by a poem as remarkable for pathos as any within the range of letters. But the wigmaws of Virginia have scarcely been entered by our writers, and yet we know not whether they be best suited to the researches of the philosopher, or to the investigation of the poet. The mysterious origin of these tribes—their mounds, fortifications, and cemeteries—have perplexed the most profound philosophers; whilst their costume, their ornaments, their relentless passions, their feuds, their devotedness to war and the chase, might entertain the most fastidious of our bards: and thus these tribes might become to our men of letters, what the highland clans have been to the writers of Scotland. But the field in the didactic, historical, and philosophical departments, is just as open to us, as to any other people. Among the ancients, husbandry has been taught through the medium of poetry, and large portions of history have been distributed among the people through the medium of verse. Through the same channel, Armstrong has instructed us in the art of health, and Falconer in that of navigation. In the same way we have been taught the pleasures of the imagination, of hope, of memory, of temper, and of religion. But the most important

inquiry, as connected with this subject, relates to the way in which our men of letters are to be supported. We have no king to bestow bounties on the indigent scholar. We have no pensioned men among us, like the tragedians of France, or the English essayists, or the Italian philosophers, or the German critics, or the Flemish artists, or the Hindoo brahmins, or the Chinese mandarins. The forlorn scholar contends against wind and tide, and finds that without the discovery of a literary steam-power, his skiff is not likely to reach any haven with velvet shores. It is not probable that literature for a long time will constitute one of the divisions of labor, though the wealth of the State might be augmented, by raising such a department of mental industry. In this dilemma, Coleridge advises all men of letters to study a profession, and most sadly did he feel the want of some calling to supply his family with bread. The muses fed him on nectar, but it was not so well adapted to subsistence, in a world where the sweetest flowers are overwhelmed by the bitterness of noxious weeds. The same theory, in substance, is advocated by Gulian C. Verplanck, in his "American Scholar;" and it must be confessed that his reasons are weighty, why men of letters in this country should become utilitarians. Thus, Burke, and Fox, and Sheridan, Brougham, McIntosh, and Jeffrey, may be regarded as specimens created on this scheme. But the professional character will invariably absorb the literary, or the literary will produce the same effect on the professional. There will be a master passion, and literature demands devotedness in order to reach excellence. Homer, Milton, Camoens, Tasso, and Dante, were beggars; and Virgil would have been in the same predicament except for the munificence of the Cæsars. These bards might have been utilitarians; but then they would never have scaled the summits of Parnassus, and been hidden from the approach of vulgar men, in that distance which they have created between themselves and the species to which they belonged. But to the cultivation of letters, Virginia has it in her power to apply some incentives, and if her legislators will decree that the first Petrarch who may arise, shall be crowned in her capitol, she will not long be destitute of Petrarchs worthy of the coronation.

The third interrogatory, whether Literature will repay the State for the time and expense involved in its attainment, will now claim a moment's attention.

This question is rather formally stated, for we contend that Virginia would be repaid a thousand fold for all her liberality in the cause of letters. Literature has created a difference among nations; and to see the contrast, nothing more is necessary than to inspect the map of the world. The map of the world may receive the same gloss from the hand of the artist; but the lights of knowledge and the shades of ignorance introduce points of discrepancy not to be misunderstood. The student can single out Egypt and the northern shores of Africa, and contemplate them with emotions different from those with which he looks into the interior of that peninsular continent. He can contrast the dignity of the Carthaginian senate with undisciplined hordes that roam destitute of the arts of life. It is true he meets with proofs of fallen greatness. The pyramids are defaced. The astronomer plies not now, as formerly, his nightly task: nor does his mind join itself in communion with the stars, as they meet in

caravans among the mazes of a wilderness composed of moons, and rings, and suns, and systems.

But we must look to other causes for the downfall of nations, than to that literature which led them forth from barbarism to refinement. Greece has lived many centuries on her ancient renown. Her books, her exploits, and her sculpture, have been disseminated through the world. The forms of free government have passed away from her; but they have been revived in other lands. Her statuary, and all the ornaments of Pericles, have decayed; but the minds of her citizens have become immortal in their works. When invaded by Persian hordes, her bards chanted those odes, the influence of which led her armies to victory, and the last voice for freedom was lifted up in the tones of her thundering eloquence. Erasmus is said to have introduced the study of Greek into the University of Oxford; and in this way Greece has not been without influence in moulding the politics of British youth, who have gone forth from beneath the monastic towers of that institution. It is true, England retains the appendages of monarchy; but she is essentially free. It seems to us Virginians a mystery, how men like Brougham and Wellington can be ruled by Queen Victoria; but it is probable, that such men pay her homage only as she turns over the sibylline leaves of the constitution, or as she waits with vestal watchfulness around the altars of freedom. But the king of England is a cypher, and her forms of government comparatively immaterial. The foundations of her happiness were laid in her schools, her colleges, and universities. Her divinitaries, indeed, have never produced such a dramatist as Shakespeare, or so practical a linguist as Dr. Carey, or such a preacher as Baxter, or such an essayist as Goldsmith, or such a novelist as Sir Walter Scott. But these men rose from among the people, and are deviations from established laws. It seems to be one of these laws that mind shall incite mind, when the intellectual powers are brought into contact, and from these seats of learning have gone forth men who have become the pillars of the English government—the ornaments of law—the patrons of popular education—and the lights of the world. From one of them Sir William Jones went forth to establish English law in India; and though we wish the Hindoos to be free, yet if they must be slaves, we would rather they should be slaves to England than to the Russian autocrat. To those universities we owe all the light which Newton, and Locke, and Bacon, and Butler, have shed on the framework of nature—on the arcana of science—on the structure of the mind, or on our moral relations. The declension of Greece can form no objection to her literature, because her literature is living, though its parent be deceased. She no longer nurses on her lap those heroes who threw lustre over her marble mountains and her olive vales; but her example produced those heroes who wrought out our independence, and gave rise to such patriots as Macomb and Scott, McDonough and Perry, whose deeds constitute the raw material out of which the muse of history will weave a robe of glory beyond the power of time to consume. The sandals worn by Lord Byron in his pilgrimage through Greece, at every footstep sunk deeper and deeper into her ashes—while the bard felt the obligation of providing in his own poetry, an urn in which those ashes might be embalmed.

The literature of Italy was the truest reflection ever

made by the mirror of Greece. It was considered a high effort of genius, when an ancient artist so depicted fruit that birds mistook the imitation for reality; and in the mental fruits that grew on the banks of the Tiber, there was a striking resemblance to the rhetoric, the philosophy, and the poetry of Greece. Rome, from a few huts, inhabited by barbarians, became an imperial power, taking in the deserts of Gaul, the forests of Germany, the sands of Numidia, and the cliffs of Albion, and passing over the Pyrenees and the heights of the Caucasus. The downfall of this power was not effected by literature, for it was among the last offices which literature performed, to scourge, as with a whip of scorpions, the growing vices of the empire. The empire fell by its own weight; and it was the voice of its own ruins, at the twilight hour, which admonished Gibbon that the sun, which had set forever, needed an historian to record his race. But when Rome was overwhelmed by barbarians, her literature was eventually transferred to Spain, to France, and Switzerland. It was subsequently revived on the soil where it had first taken root, and free governments arose in time from its influence.

Literary men may accomplish much for the preservation of liberty, though devoted for the most part to peaceful employments. Some of them, it is true, have obeyed the summons, when called to the defence of their country. This may be affirmed of the Greek tragedians, of the Welsh bards, of the writers of Spain in the Moorish wars, and of some of the Polish poets in the aggressions of Russia. But, for the most part, their attention has been directed to whatever can soften the manners—refine the taste—subdue the passions, and augment our social pleasures. When Napoleon was subjugating continental Europe, the scholars of France and Germany were in retirement. Chateaubriand was in America; the Baroness De Stael was a prisoner at Copet, on the Lake of Geneva; Cuvier was silently enlarging the empire of man over the birds of the air, and over the shells of the sea; Goethe and Schiller were waiting anxiously for the flowering of the olive tree of peace, that the nations might partake in its shade, of the mental repast which they had provided. The pursuit of letters is necessary to counterpoise the fierce passions of men, and the value of poets cannot be calculated on the score of attaching a peaceful peasantry to their homes. Had Burns fulfilled his intention of emigrating to the West Indies before enriching his country with his works, then Cuba or Hispaniola might have gained all that Scotland would have lost. He would have left a blank on the face of his country, that is now filled up with all the humor—the tenderness—the rural contentment—and the moral sublimity of Scotland. And why may not men arise, who shall endear to Virginians their native state, a land which the writer loves:

"Although no son of thine I
Yet I have climbed thy mountains, not alone,
And made the wonders of thy vallies mine."

We have adopted a form of government unparalleled by any nation in the history of man. The defects which are visible in the republics of Greece, of Carthage and Rome, of Italy, Holland and Switzerland, have been avoided, whilst their excellencies have been combined in our confederacy. It was owing to the light and intelligence of the people, that our states have met together as harmoniously as a galaxy of

stars takes its position in the world of nature. Among the bonds which are to hold together a constellation so imposing, the chain of a common language and literature will prove one of the strongest, and we believe that Virginia will be prompt to create a multitude of its firmest and brightest links.

To these views might be added some remarks on the aids which morals and religion have received from literature: but such a discussion would lead to an article as long as that which we are about to close. But we cannot consent to conclude before observing, that should any reader suppose that the writer arrogates to himself any literary pretensions, he would entertain a suspicion altogether unfounded. The title of a man of letters would be a misnomer indeed, applied to an individual whose professional studies are vastly more than a match both for his bodily and mental powers. But the writer has volunteered in this cause, because his client has often been unjustly arraigned, and occasionally by some of his own sacred vocation. An Athenian orator once undertook to appear for a female, but his pleas could make no impression on her obdurate judges; he became dumb, however, and simply pointed to the assemblage of her charms, and his silent eloquence prevailed to her acquittal. The writer deems himself to be engaged in studies, that will end in results far more important than any that will ever be found on the milky way of science, or on those paths of literature that wind around all the mental beauty, with which the imagination in all ages has been redolent. We think it is Coleridge who remarks, that he relinquished the dreams of Plato for the realities of Paul—and, may we not add, for the songs of the patriarchs—for the raptures of the prophets—for the melody of Hebrew bards, and harps chorded by celestial choirs? *

B.

* Our author has struck the vein with a master's hand. Cannot we prevail upon him to prosecute his labors, to open up the mine of literature, to develop more of its treasures, and to animate other laborers in the same goodly work?

Ed. So. Lit. Messenger.

CHON-NE-LAR,

THE CREEK MAIDEN—WHO REFUSED TO EMIGRATE.

By Henry Thompson, A. M.

Child of the Eagle Chief! why lingerest thou here?
No lov'd one is with thee—no warrior is near.
Like a bird from its flock, that is soaring alone,
With plumage unsullied, o'er mountains its own,
Thou wand'rest dejected, all lonely dost roam,
Heart-broken to answer—"I'm an exile at home!"

And wretched, forsaken! I would be forgiven,
And repose in the earth decreed us by heaven,
And part not forever from the home I revere;
But roam till I perish o'er the graves that are here.
For a brother now sleeps in this hallowed spot!
A son of the forest! O awaken him not!
O awaken him not—nor his lov'd one despoil,
Or thy blood, *E-sta-hat-ke*,* will crimson the soil.
For the Creek is abroad! ah! yet unsubdued,
And the eye of the eagle is still on his brood.

By yon lake, now thine own, from which we are wean'd,
Our fathers in council, have often convened;

* White man—pronounced East-tu-hat-ka.

But the torchlight is out—and the war-song is o'er!
 To the voice of *Ma-na-wa** we listen no more.
 But the whoop, and the yell, and the games of the hill,
 Are lingering too sadly in memory still!
 But the young bird I lov'd, from his eyrie hath flown,
 And left his Chon-ne-lar, to wander alone!
 Never more to return to the land of his birth,
 Nor to tread the green haunts of this beauteous earth;
 Nor come with the Wampum,† affection arrayed,
 To lean on his rifle—when Chon-ne-lar is laid
 With her dead, by the stream, where the waters will curl
 Their murmuring eddies o'er the desolate girl,
 Who wanders dejected in the land of the Creek,
 'Mid a language discordant, her tongue cannot speak!
 But 'tis well! she is here in her own native place,
 And forsaken, will perish—the last of her race!

* Head Chief—pronounced Min-nor-way.

† A worked belt: a maiden's gift to her warrior lover.

THE GRAVE IN THE FOREST.*

By the author of "Atlantis," &c.

"We had ridden about twenty-three miles, having left the Indian hovel where we slept, by daylight, and our path for the better part of this route had lain over a single horse-track, and through a dense forest which had never been dishonored by the axe of the pioneer. The day began to grow exceedingly sultry towards noon, and my father proposed that we should ride some few hundred yards into the wood, where the trees were loftier, and the underwood less dense and tangled. Among some of the long vistas which gleamed upon us continually on either hand, we did not doubt that we should find a pleasant breeze stirring, which we could not hope for, where the trees were small, and the shrubbery thick, and almost matted together by the rank growth of that fertile region. A little hill, on the right hand, particularly invited our attention. It was covered with pines of the largest size, and so closely set that the mingling branches at the top almost entirely excluded the sun; this probably being the reason of the deficient undergrowth below. Little glimmerings of his light alone appeared, dispersed and fleeting among the far recesses, giving a most spiritual aspect to the spot, and inviting the fancy to that sport which it so much loves, among vistas seemingly interminable. The cool shadow wooed us, and we were glad to break through the bushes which environed our path, and ride quickly up the gradual ascent into its shelter. Once there, the heat no longer oppressed us, but the stillness of the scene, its moral desolateness, and the constant whisper of the breeze, as it fitfully rested upon the tops of the pines, which yielded and bent beneath its passing pressure, induced that desire for repose which the previous heat and our fatigue rendered eminently grateful. We let our horses free to crop the tender herbage, not caring to fasten an animal that seems quite as conscious, when in strange places, of his dependance upon his master, as the latter can possibly be upon him; and seeing them

engaged to their satisfaction in the midst of a plot of towering grass, we threw ourselves down to our own repose. I was scarcely conscious of having slept at all, when my father awakened me with an intimation that it was time to renew our journey. We had rested full two hours, and the wigwam of a Choctaw half breed, fully twenty miles off, was our destined resting place for the night, and the only one within possible reach.

"You have slept soundly," said my father, after I had risen—"more so, I think, than if you had known where you had made your couch."

I turned, at these words, and discovered, for the first time, that my place of rest was the hillock of a grave. The shape of it was still perfect, though a pine tree had grown up at the foot, one of the roots of which ran out of the mould, and partially along upon the surface of the grave.

"An Indian's—some Choctaw chief, perhaps," was my remark.

"No! a christian's. The Indians seldom make individual graves so conspicuous, unless they bury in the tumulus of the tribe—they are more apt to conceal the burial place than ostentatiously to reveal it. I am not satisfied that any of the American tumuli belong to the ancestors of the present race. They certainly do not to themselves. But this grave is that of a white man and a christian. While you slept, I drew up the stake which was at the head of it, and partially concealed beneath the long grass. It lies at your feet. It was once a cross. The arms of the cross are wanting, but you may see where the groove has been made with a hatchet to receive, and where the nail has fastened it. The nail has been eaten out with rust, and the cross has fallen down in consequence. But the groove and hole are there; and there is yet other evidence. Look—your eyes are younger than mine—look, and see if there is not a letter upon the head of the stake. It seems to me that there is, or was. Can you make it out?"

"It is either an M or an H, but which? The two columns are there necessary to both letters, but the connecting strokes are too imperfect for detection."

"It matters not—we should know nothing, even if we knew all; and yet our desire to know is natural enough. But if we knew the name of the inmate, it would not content us; we should be for asking more questions. His family, his fortunes? Where was he born—whither was he journeying—by what means did he come to his end? Your own blood may have circled in his heart, for all we shall ever know of the matter."

"True, sir,—yet these are only a few of the questions which a very natural curiosity would ask, without even hoping for reply. Was he young or old—happy or miserable—did he long for life, in the moment when it was taken from him—was he prepared for death when he found it inevitable? What, next, is the feeling of his connections in his absence—was his fate ever known to them? Perhaps, even now, there is a fond mother, or a devoted wife, that looks for him day by day, and still wonders that he does not come."

"Perhaps—these are inquiries which may be made every day in tracing out the histories of our western pioneers. And yet the probable fortunes of the sleeper here, may be conjectured from his place of burial. He was a discontent, or he would not have been here;

* From "Southern Passages and Pictures," a volume in preparation by the author of "Atlantis," devoted to the illustration of traits, scenes, and traditions of the south.

most certainly, one of those restless, impatient mortals, something like myself, who are forever blazing trees and making tracks for their neighbors. He has distrusted the world—wronged it, perhaps; or—which is worse, and however strange you may think it, far more common—has been wronged by it, in its ignorance of his claims or its recklessness of his rights, and been driven by it into exile. When you grow a little older in the world, you will meet with this history at every step. It is, perhaps, no unfitting termination to the fortunes of such an one, that way-farers should find his body by the roadside, and scooping out for him a shallow grave, have laid him in it, and hurried away from the spot, seeking solitudes yet wilder, and a destiny quite as sad."

As these words were spoken, my father led the way to the horses, his manner evidently indicating a desire to escape from the subject. But I was young and had no such dread of it. The evils of life were the convictions of his experience; to me, they were, as yet, only topics for imagination; and, long after my father had ceased to speak of this little incident, I was revolving it in my mind in connection with a thousand fancies not the less sweet, because they were unavoidably serious. In this manner I strove to search out, and to trace the probable history of the occupant of that lonely grave in the unbroken forests. Who were his friends and parents? Doubtlessly, there was a time when he had been blessed with the love of both. Childhood had surely brought with it many sweet fellowships. Did they cease to be sacred—had the pledges of either been violated? From his playmates in boyhood he had sport and sympathy. How melancholy was the thought that manhood had preserved no testimonies of youth—that neither friends, nor playmates, nor parents, may have been beside him in the last agony! There was something terrible in this conviction, and I strove to drive it from my mind. Could it be, that, when the earth seemed to reel beneath him—when the skies grew suddenly dark, and the light began to fade; and the impatient death, whom he could baffle no longer, grappled with him in all his terrors, and hurled him, stiffening as he fell, to the unfeeling earth—could it be that there were none of all those whom he had known in boyhood, to compose his distorted frame—to smooth his agonized features, and wrap him decently in the concealing pall for his final slumber? Were they strange men, whom he had never before seen or known, to whom his cruel fortunes surrendered this sacred office? Was it a passing way-farer like himself, who happened at nightfall upon his insensible body, lying across the road; and who with a bald humanity, gave it a shallow grave by the wayside; thinking of his own probable need while he did so, and otherwise, utterly unmoved by any feeling for his brother? This was the suggestion of my father, and according to his experience it was doubtlessly true. Such is the every-day history of thousands who wander off into the solitude, far away from man, and too frequently, perhaps, seeking to escape from God. But I could not bring myself to believe, that such was the case in the present instance. There had been some care manifested in preparing the rude memorial of the sleeper, by which we knew that friends must have buried him—that friends must have been with him in his last moments. The rude cross, and the imperfect initial were proofs of this. He was neither

alone, nor without commiseration when he died. This conviction secure, my fancy proceeded to other proofs in tracing out this history. There must have been one who strove for his recovery—who brought him the cooling draught, and the sedative medicine—who cheered him by accents of comfort through the long and weary night of grief and sickness! I felt assured too, that this fond attendant must have been a woman. Such duties are seldom well done by men. I fancied that I beheld her as she smoothed down his pillow, and bathed his head with an officious zeal that brought a smile into the patient's eye, and a pleasure to his heart, even though he may have felt all the while, how utterly unavailing was all such attendance to save. Then came the crisis—the parting agony; and the shriek which announced her desolation, seemed almost to sound within my ears. The next movement of my fancy brought with it a terror. Where was she—the survivor? What was her fate? I turned hastily from the scene and the subject. I feared lest I should find for her, a destiny even more dreadful than that which my imagination had traced out for him."

From MS. "Personal and Literary Memorials."

THE SAME SUBJECT.

[The reflections above written forced themselves frequently upon me in after-days, when more various wanderings had led my footsteps to other graves, and were at length embodied in the verses which follow.]

Death takes not his abode, alone, where crowds
Gather for many purposes—where pride
Erects his habitation, and the rout
Of spirits, schooled against austerities,
Meet in licentious revel;—but even here,
Where the deer stalks in safety, and the wild,
Unruffled of its rich virginity,
Is ruled by sov'reign nature as at first—
Here Death hath built his melancholy shrine,
And the small mound of turf that now extends,
Defacing the plane surface at our feet,
Hath proof that he hath claim'd his sacrifice,
And, monarch of all time and every place,
Hath made life render up his trembling staff,
And, like some outlaw, reckless of accomplice,
Hath eased him of his burden.

Shall we ask—

What were thy fortunes, sleeper?—who wast thou?—
What were thy name and lineage? In what part,
Foreign or native, of earth's wilderness,
Didst thou begin thy journey? Was thy life,
Honor'd by gifts of goodness—smeared by guilt;
Baffled by fortune—hard beset with foes,
Or, cast away in thy own recklessness,
By profligate waste of days?

All in vain,

This idle quest—yet not to virtue vain,
If from thy grave, an upward voice might rise,
To give us answer. Nothing may we know
From thy sealed lips and silent dwelling place!—
My own blood may have circled in thy heart,
Yet know I naught of thee, and cannot know.

Yet may the general aspect of thy lot
Be traced in this thy sepulchre! Thy thought,

Was one that kept thee sleepless. Thou hast hoped,
 With an unyielding, vexing discontent,
 For wealth or honors; those delusive gauds,
 That dazzle the best eyes, and still defeat
 The wisest aims of greatness!—or hast sinned,
 Beyond forgiveness of thy fellow. God,
 The prince of infinite power, if thou hast prayed,
 Will grant what man denies thee. Thou hast sinned
 Against thy neighbor's greatness. Thou hast dared
 Be bold against him, when the power was his
 To crush thee with a finger. Thou hast fled
 His keen pursuit of vengeance, and the doom
 Of exile has been writ against thy name,
 Being thy moral death: The rest is here!

I read the story of thy folly here—
 Thy folly, or thy fortunes. Thou hast wronged
 Thy fellow, in denying him thy trust!—
 Thy nature asked for confidence—its laws
 Commanded thy dependance. Thou wast bade,
 Be humble in thy aim, and love thy kind,
 Even when it wronged thee. Hast thou yielded love,
 Or trust, to him that sought it? Didst thou yield
 Meek deference to thy better—to the wise,
 Having the nation's rule? Or didst thou shake
 Thy bold hand in defiance, and depart,
 Calling down vengeance in red bolts from heaven,
 To do thee justice in consuming flame?
 Wouldst thou could answer! It may be, thy tale
 Were of the world's injustice—the worse wrong,
 That of the many striving 'gainst the one.
 Thou couldst unfold a grievance which should bring
 A pang to hearts of honor—a damp sweat
 On brows, that feel thy argument was theirs—
 Thy cause, the cause of freedom. He who stands,
 As I, above thy forest-sheltered sleep,
 May read thy story in thy dwelling place.
 Thy steps were from thy home of many hours,
 From time of youth's first blossoming. Thy grief—
 The grief which stretched thee on thy bed of death—
 Came with thy exile. Thou wast banished all,
 And death, that met thee, was a comforter,
 To guide thee to a dwelling, and prepare
 A couch, and give thee shelter from the night,
 Fast coming on; and storm that followed close;
 Pursuing thee, as still the storm pursues
 The banished and unfriended. Thou hast sunk
 To thy last sleep, untroubled by the cares
 That throng about the city bed of death—
 No idle tramp of men has followed thee:
 A hurried hand—perchance, a thoughtless heart—
 Hath scooped thee out a grave some three feet deep,
 And left thee in the solitude to God!

The heart hath better hopes. Humanity
 Springs up beside the wayside, like a flower,
 That takes the wasteness from the wilderness,
 And sweetens its bleak waters. I have hope
 Thou wert not all untended at the last.
 Some hand hath smoothed thy pillow, when disease
 Kept thee awake through the long, dreary night.
 Thy birth had friends and parents. Childhood came,
 And brought with it a livelier fellowship;
 And boyhood gave thee sympathy and sport.
 And were there none of all thy fellowships—
 Was there no parent in thy last sad hour,
 Nor she thou lov'dst in childhood—nor the boy,
 Who mated out with thee in roguish play,

The measure of thy laughing pranks erewhile,
 Beside thee when thou groand'st in agony?
 And in the trying moment, when earth reel'd
 About thee, and the skies began to fade,
 And darkness fill'd thy chamber, and gaunt Death
 Dragg'd thee about and wrestled with thy frame,
 Already overborne—and hurl'd thee down
 Never to rise—was it a friend long tried
 Who decently composed thy stiffened limbs,
 And spread thy pall above thee; or strange men,
 Whom thou hadst never seen, and couldst not see,
 To whom thy fortune, most unnatural,
 Gave up this mournful office? Did they take
 Thy frame, and scooping out a shallow bed,
 That gave thee scarce a shelter from the rain,
 Consign thee, with a word, unto thy tomb—
 With vague conjecture, scanning all the while,
 Thy hopes, thy fortune, and thy loneliness?
 Had all deserted thee that loved before?
 Or wast that thou, in wilfulness of mood,
 Self-banish'd, fled the many who had loved,
 Deplore thy error still, and weep thy loss?
 Did none come near to give thee medicine,
 Or smooth thy pillow down, support thy head,
 Watch by thy midnight couch, and still attend,
 With an officious tenderness and zeal,
 Which makes the patient smile through every pang,
 And bless the malady, however deep,
 That brings along with it such pleasant cares?

And all that infancy and boyhood brought—
 Mother and mistress—schoolmate, brother, friend—
 Thy manhood took from thee, even in the hour,
 When most their cares had help'd thee! 'Twas not thus
 Thy feeling, when in manhood's health and strength,
 Thou fledst from the proud city, with a pride,
 That made thy errors look like nobleness,
 And kept thee in them. In that hour of death,
 Feeble and prostrate, what a mockery seem'd,
 That spirit-exulting which had led thee forth,
 Into self-written exile. Thy faint heart
 Pray'd then for that humility—that hope
 It then rejected in thy hour of strength;
 And thou hadst given the torturing pride of years,
 That fed upon thy heart, and all its hopes,
 For one poor hour of love—for those sweet smiles,
 Of her, whose heart looked out from tearful eyes,
 Still hoping for thy soon return, yet sad
 As with a mournful presage of thy fate.

That fate, perchance she shared. She fled with thee,
 Blind to thy vices, to thy errors blind,
 Flying from all beside, and glad to own,
 A dwelling in thy heart,—alone abode,
 Where thou couldst love her. Thou didst build her cot
 Beside yon thicket, near yon rippling brook,
 And reared the jasmine round her cottage door,
 And trained the wild vine o'er it. Thou wast blest,
 Deep in the forest, happy in the all,
 Rich in the little spoil thou robb'dst from man.

And where is she? Thy dwelling place is lone—
 Thy cot in ruins, and the tangled vine,
 A thicket where the yellow serpent glides,
 And the green lizard creeps. Where is the bud,
 That made thy cottage beautiful—that soothed
 The desert to thine eye, and fill'd thy heart
 With such abundance of her treasured sweet,
 That man's hate was forgotten in her love?

She answers not. Her voice like thine is still,
In these wild solitudes! What deeper shade,
Conceals the grief it never may subdue?
Her fate—if such it be—is worse than thine—
To live beyond the loved—outliving all
Those choice plants of affection, which the eyes,
That brighten'd while they watch'd them, wet with tears,
And, train'd too well, forebore not flowing still,
Though all had wither'd they had cherish'd long.

She did not perish when she saw thee die,
Else had they made her grave where thou art laid,
And that were merciful. No flower is here
Which she has planted; and the weeds have grown,
Untended, like thy fortunes, thorny and wild,
Meet emblem of thy fate. Methinks,
If there was nothing sweet to bless thy days,—
If youth had no enjoyment—childhood no friend,—
Manhood no home—the love of country nought,
To make a venerated shrine a charm,
More sweet to age than all the joys of youth—
If but affliction clung to thee through all,—
It had not been a misplaced charity,
Of her, or the sad seasons, to have left
One flower above thy grave, poor desolate!

AN ADDRESS

Delivered before the *Franklin Literary Society of Randolph Macon College, Virginia*, June 19th, 1838, by *D. L. Carroll*, D. D., President of *Hampden Sidney College*.

Such is the title page of a pamphlet of very neat exterior, just thrown upon our table. On the second page we are apprised of the subject matter of the address, thus—"In what more appropriate way can I occupy your time, on this occasion, than by pointing out to you some things in our condition, as a nation, which show that we are yet to have a *literature of our own*; and then specifying some of the duties of educated men on this subject?"

The circumstances instanced are these:

1st. *The intellectual character of the men who founded this nation, and the influence of the institutions which they established.*

2d. *The bold and diversified natural scenery of our land.*

3d. *The vast physical resources of this nation.*

4th. *The increased interest now taken in the cause of popular education.*

5th. *The peculiar excitability of American mind, and its susceptibility of being turned to account in the formation of an American literature.*

The duties of educated men at such a time are delineated under the following heads.

First—*To give impulse and direction to the existing movement of American mind on this subject.*

Second—*To cherish enlarged and liberal views respecting the literary institutions of our country.*

Third—*By their own acquisitions and example to elevate the standard of intellectual excellence—and*

Lastly—*To bring the influence of the Bible to bear on the formation of our literature.*

Dr. Carroll is one of our fine writers, and although the address before us, bears but few marks of deep research, or hard thinking, it is nevertheless a happy and well-timed contribution to the great cause it espouses—the advancement of a literary ambition in our American youth.

There is something handsome in the two neighbor institutions, 'Randolph Macon' and 'Hampden Sidney,' looking so neighborly. The President of the one, addressing by invitation the young men of the other, and they providing the reading rooms of both institutions, and the reading public, their common patron, with so neat an edition of the address.

We hope this mutual confidence and good feeling will long continue. Most heartily also do we wish success to the patriotic work of the formation of an American literature, whether that be an independent literature, elaborated out of pure American materials—or merely a general and generous literature *in America*—the offspring of an American *literati*, honorable and eminent in the sight of all lands.

But absolutely, it is right humiliating that as yet in the Old Dominion, the literary shepherd of our youth has to goad the popular patriotism, by telling them of the ridiculousness of "an edifice of brick and mortar, put together in the coarsest manner, and covering an area of a few feet—a fragmentary collection of shattered apparatus, a few old volumes, received by donation, as a library, a few varieties of limestone and quartz rock, as a cabinet of minerals, and then a faculty gathered fortuitously from the walks of business or of ordinary professional life," and all this "constituting the beau ideal of a college." Tell it not in Europe, publish it not in the streets of foreign cities, &c.

But every thing like a national literature is the work of time. Perhaps we are a little too young yet as a nation. Our warriors, patriots, statesmen, and divines, are not mean in the comparison with those of any other age or clime. But "distance lends enchantment to the view" of human characters, as well as of mountains. Our emigrant forefathers are worthy enough of immortal verse, but they are men as it were of yesterday. Our institutions are excellent, but without the sanctity of age. Our nation's birth was subsequent to that of gun-powder, of course we have no walled towns, and the story of a siege is not likely to be laid in this land. American states came into being under the light of christianity—of course, we have no old heathen temples among us, tumbling into ruins. Our architecture is all the creation of ordinary, social necessity, and rather of hurry than otherwise; of course, we have no huge castles, pillars, or pyramids, or such like; and our little displays of architecture in its various orders, Corinthian, Ionic, Doric, Gothic, &c., are rather small scale displays of pedantic servility, than any thing magnificent and original. Our history is all the story of a noon-day scene; there are not many lights and shades about it; no obscurity, unless it be the work of slanderous rivalry of inventive disputation. It does not extend back into the dark ages. It has no mythology worthy of the name—no ruins to form the starting place of conjecture; of course, poets pine and starve here, even if like fairies, they demanded nothing but superstitious and wondering attention. We are in the light of the Baconian era. This is an age of utility—ours is a nation of business, (if we can overlook the broad blots of mere idleness and vice.) The unclassic western maxim, "go ahead," is gilded on the head of the flag-staff of this people. These are fundamental facts that must lie at the foundation of our literature; and the simple superstructure must go up upon them—the absolutely peculiar mone-

ment of American originality. We have come upon the stage of this world too, as a nation, under the dynasty of science. Astrology was the delusion of other days and of distant lands. Our youth are learning the matter-of-fact science of astronomy. Alchemy was the hallucination of the eastern cloister, in a barbarous age. We have the universe of matter before us, under the slow and small beginnings of chemical experiment. Necromancy, soothsaying, witchcraft and fable at large, all in their turn marred the incipency of the literature of other days and other nations, but they were all exploded before our oldest college edifices were built, or charters enacted, and our literature dates since their death. Light and immortality, come to light by the gospel, shone upon the wilderness when our forefathers landed. Here then is the pedestal of American society, government, genius, literature, character, and fame. The obstructions in the way of all, are manifest enough. We have too much public domain still unappropriated. The waves of emigration roll too conspicuously toward the wilderness. Wealth is too near under the gaze of every body, as a bait to exertion. We have too many long rivers to navigate. We have rather too sparse a population every where as yet, and too little division of labor in all departments; too much bustle, and too little leisure—and, more than all, as a people we are not much more Americans as yet, than we are an assemblage of emigrants and their children from other nations, *in America*. If some power of heaven, or earth, or both, had come and civilized the red men of the forest, gathered them into friendly society, organized them into states, gave them religion, and warmed their minds and bosoms into that fruitfulness of thought and feeling and invention, out of which a literature springs—if institutions had sprung up thence from the seeds of truth, and under the bounties of heaven—that would have been all and purely American. As it is, it will no doubt be a long time before any thing that is American will be entirely original.

But let the question of originality take care of itself—we need not vex ourselves about it. The point really important is the intellectual and moral advancement of our population. This is a field as open before us, as the skies above, or the wilderness westward. And he is a benefactor of our race, and the nation's friend, who does any thing towards this object, whether it be in thought, word or deed.

But, in conclusion of these hasty observations, we must be contented to select one consideration from the many that rise to view, and that one, of course, ought to be the most important one of all. It is this—*religion* is indispensable to a dignified, uniform and permanent literature. On this point let every national literature that the annals of time bear, be produced as witness—God and nature can not be obscured nor divorced from each other. Of this the bosom of every man, not yet a demon, is conscious. Give the people religion, and give it to them early, and give it to them always. It will make them orderly, moral, thoughtful, intelligent, aspiring, enterprising and “ready unto every good work.” Then schools will arise and learning will advance. Every nation has a soil of its own, and an atmosphere and a sky somewhat peculiar to itself, but God has given one Bible to the race; and, in the language of an old heathen poet, quoted by the Apostle Paul, “we are all his offspring.”

On this main point, let Dr. Carroll speak:—

“It would be doing injustice to this subject not to notice briefly, in conclusion, the duty of educated men to bring the influence of the Bible to bear on the formation of our literature. An attempt has been made in our own country, on a small scale, to break the alliance between religion and learning, and to divorce the Bible from our academic institutions. It is difficult to decide whether such an attempt offends most against sound philosophy, good taste or correct morals. Coleridge, a profound mental philosopher and a good poet, has somewhere said that ‘an intense study of the Bible will prevent any writer from being vulgar in point of style.’ He perhaps never uttered a sentence, that gave him a better claim to philosophical discrimination than this. To illustrate the beauty and sublimity of the holy scriptures, and to show their salutary influence on the formation of a national literature, would demand limits far more extensive than the present address will allow. Besides giving us an authentic account of that tremendous moral overthrow in Eden, which has so deeply influenced the phenomena of our present condition, the Bible presents the most touching and tender scenes of the display of the domestic affections—the unsophisticated friendships of the earliest and simplest stages of human society—those agitating extremes of elevation and depression of fortune, in the history of *real* life, which far exceed, in high-wrought and tragic interest, the plot and the catastrophe of the drama or the romance; it presents an analysis of moral character the most critically exact, and furnishes the most perfect models of *true greatness*; it contains poems pervaded with an imagery that familiarizes the mind to those general forms of beautiful nature which are unfading and immortal; and it discloses the stupendous realities of a future world, amidst a sunlight and a scenery sufficiently resplendent and sublime to be the more immediate residence of the Deity. Now these are objects of inspiration and of classic allusion, that infinitely transcend the entire machinery of pagan mythology, and all the incidents of profane history. The source from which the Nazarene and the Jewish fishermen derived their imperishable code of morality, far exceeds in riches and depth, and will more amply repay modern investigation, than that from which Plato and Socrates collected their splendid fragments. And who can doubt but that the fountain from which David and Isaiah drank, contains waters more calm, and clear, and deep, imaging the azure above, and reflecting the pearls beneath, on which they sleep, more brightly than the Pierian spring or the Castalian fount of classic memory? Does not ‘Mount Zion above,’ whose summit is gilded with the beams of an unsetting sun, and whose foot is lavied by ‘the pure river of the water of life, clear as crystal,’ with ‘the trees of life, on either bank,’ in their perennial green, and their golden fruit, afford richer and more ample materials for the muse, than can be furnished by the fabled Parnassus, peopled with every form of beauty with which the unassisted imagination can invest it?

Whoever will examine the adaptation of the objects disclosed in revelation to the original susceptibilities of our mental constitution, can see, without prophetic precience, the sway which the Bible is destined to have over the intellectual character of our race. True, as yet there is scarcely an approximation to a Christian literature in the most refined nations of the earth. But it will not *always* be so. The triumphs which the Bible will yet gain over the human intellect, and its power to lead captive at its chariot wheels the genius and the learning of the world, are as certain as those splendid conquests which it has begun to make, and is pledged to complete over the moral nature of man.

Who can compute the influence which it may yet exert on the literature of nations, or how much has been lost by the absence of that influence on the ages that have passed away? How different would have been the literature of the Augustan period, had it been pervaded by the spirit of the Bible! The monuments of pagan genius and taste of that era, have indeed won the admiration of the world; but it is that kind of admiration which we feel in contemplating the proportions and symmetry and beauty of the statue, with the concurrent conviction that still it is *cold and lifeless*. The body of the intellectual products of that age, has the stature and the proportions of manhood, but it wanted *inspiration* to ‘breathe into its nostrils the breath of life,’ that it might ‘become a *living soul*.’ This the Bible is destined to do for the literature of future times. Whether our educated men will avail themselves of its influence in the formation of ours, or not, divine revelation will yet transmute its light and purity and vivifying spirit through the literature of all nations. The sacred volume will not always be excluded from the empire of mind. Genius shall yet pay its homage and reverently worship at the shrine of the holy oracles. And when this world shall have completed that grand moral cycle, in the calculations of prophecy, which is to bring it nearer to the central light of heaven, all nations will have a literature, pure and chaste and sparkling with the dews and the sunbeams of the millennial morning.”

CHARITY.

It is the duty of a man to love his greatest foe,
And shield the arm that late was raised to work his direst woe:
Just as the scented sandal tree, in all its pride and bloom,
Sheds on the axe that lays it low a sweet and rich perfume.

DESULTORY SPECULATOR.

LIFE.

I look upon life as a sickly and feverish dream. Its highest enjoyments are transient and fluctuating, and its realities painful and rapid. The poet of nature has with great truth exclaimed, "How dull, stale, flat, and unprofitable, are all the uses of this life." To him who has passed its meridian, and descended into the vale of years, its uses will indeed appear "dull and unprofitable." He looks back upon the irregular and devious path he has trodden, and perhaps remembers with regret, the few flowers he has culled and left to perish, and looks forward to the barren waste that lies before him. He may recall the joyous feelings of his youth, when fancy dipped her pinions in the rainbow hues of hope—when all the breathing scenes, and gorgeous and living pictures of this world, were "beauty to his eye and music to his ear;" but, while he remembers them, he sickens at the thought that they were but the "baseless fabrics of a vision"—the glittering and evanescent baubles of fleeting enjoyment—which have

"Gone glimmering through the dreams of things that were."

And what is life?

"A summer's day!
That dawns bedewed with icy tears;
Youth glitters like the orient ray,
Till busy, toilsome noon appears:
Then as the sultry sun descends,
The dim horizon shadowy grows,
While nought but gloom and care remain,
To veil the scene at evening's close."

But what is life? To the great majority of mankind it is, after all, but a mere struggle for existence—a constant effort to procure a modicum of food and raiment. To this end, man labors through life—passes off, and is succeeded by others, who pursue the same dull and beaten path. In civilized, as well as savage life, man is propelled by the same impulses, and struggles after the same object. They, indeed, who are born to opulence, are not governed by the same necessity; but are stimulated to action by another motive—the love of pleasure, power, or fame. But action of some sort is essential. To all, the great Creator has issued his mandate, that virtuous action is indispensable to human happiness. The motionless and unagitated lake, may please the eye by its apparent placidity and repose, while its waters are putrid and its particles pregnant with the seeds of pestilence and death. He who labors for mere subsistence, gives strength and activity to his body, and consequent energy to his mind; and he who seeks fame, or wealth, or power, must be intellectually, if not physically employed. He feels the stimulus which gives him pleasure, and he bounds forward from cliff to cliff, in his ascent, till death closes all his exertions, toils, and hopes. Disappointment does not always arrest his career, but sometimes adds new ardor to his pursuit and fresh vigor to his efforts.

"Man never *is*, but always *to be* blessed."

He lives and acts in the anticipation of future good; and when all the sickly realities of human life have been en-

joyed, and have passed away, he still looks forward to more substantial and enduring happiness beyond the grave. All human pursuit and human exertion terminate in this common boundary.

"The paths of glory lead but to the grave."

And when, at the close of life, and he is about to plunge into the fathomless ocean of eternity, he casts back his eye upon the varied scenes through which he has passed—the toilsome and painful march he has accomplished—the unsubstantial pageants he has sighed for, and the melancholy ruins of blasted hope or of wild ambition, he must exclaim, in the language of Pindar, "We are shadows, and the dreams of shadows are all our fancies conceive!" Abdulraman, the third Caliph of Cordova, had full experience of the vanity of the world, when he pronounced the memorable summary of the days of happiness he had enjoyed: "I have now reigned above fifty years in victory or peace, beloved by my subjects, dreaded by my enemies, and respected by my allies—riches and honors, power and pleasure have waited on my call—nor does any earthly blessing appear to have been wanting to my felicity. In this situation I have diligently numbered the days of pure and genuine happiness which have fallen to my lot: they amount to *FOURTEEN*!—Oh, man! place not thy confidence in this present world." How very few can say even this. Fourteen days of happiness out of fifty years of existence, are more than fall to the share of the great mass of mankind. What is life after all? A fitful dream or a painful reality. Misfortunes embitter, miseries sour, and guilt poisons its enjoyment. Who would wish to live over the years he has numbered? To pass along the same path—to feel the same emotions—to witness the same sickly pageants, and to experience the same ingratitude, contumely, oppression, and wrong? It is made up of moments that are wasted—of days that are misspent—and of years that only fill up the brief span of life, and leave but the memory of the past behind.

"To-morrow and to-morrow and to-morrow,
Creeps in this petty pace from day to day,
To the last syllable of recorded time;
And all our yesterdays have lighted fools
The way to dusty death."

Let man then regard this world merely as a preparatory stage to a future and eternal state of existence. Let him consider his misfortunes, sufferings, and miseries, as intended to prepare him the better for a world of undying glory and happiness, and let him persevere in a course of virtue and usefulness, in contempt of the malignity of his enemies, and the storms of adversity that beat around him, and he will infallibly attain to that perfection and happiness hereafter, which should constitute the only true end and aim of all human exertion and pursuit.

"Life's little stage is a small eminence,
Inch high the grave above, 'that home of man,
Where dwells the multitude:' we gaze around,
We read their monuments; we sigh; and while
We sigh, we sink; and are what we deplored:
Lamenting, or lamented, all our lot."

Washington City.

G. W.

CROSS READING.

One of the first specimens of cross reading was given by the celebrated Cardinal RICHELIEU, in a letter to the French Ambassador at Rome, dated the 23d of November, 1638, in which he gives a true character of a person who had been soliciting him for some time, for a recommendation to that functionary. It is as follows—

"Master CAMFY, a Savoyard by birth, is the man who will present to you this letter. He is one of the most vicious persons that I ever knew; he has long and earnestly solicited me to give him a suitable character, which I have accordingly granted to his importunity; for, believe me, sir, I would be sorry that you should be mistaken in not knowing him well, as some worthy people have been, and those among the best of my friends. I think it my duty to advise you, to take especial care of this man; nor venture to say any thing before him, in any sort. For I may and really do assure you, there cannot be a more unworthy person in the whole world, I well know that as soon as ever you shall become acquainted with him, you will thank me for this my advice. Civility obliges me to desist from saying any more upon the subject.

friar of the order of St. Benedict, the notification communicated by me in discreet, the wisest, and the least among all that I have conversed with: to write to you in his favor, and together with a letter of credence; his merit rather than to he deserves infinitely your esteem; and wanting in serving him, from being I should be afflicted if you were so, on that score; but now esteem him Wherefore, and from no other motive, that you are most particularly obliged to show him all the respect imaginable, that may either offend or displease him, truly say, I love him as myself, and convincing argument of a mean and than to be base enough to injure him; are made sensible of his virtues, and will love him as well as I do, and The assurance I entertain of your urging this matter on you further, or I am, sir, your affectionate friend,

RICHELIEU."

I wonder if our present worthy President has ever thought of this scheme. It would have been useful to him in the palmy state of his popularity.

While on this subject I must not omit another specimen of this species of ingenious deception. It is taken from an old history of popery, published in 1679, and called the Jesuits' creed in England, and will suit either catholic or protestant.

" Pro fide teneo sana	Quæ docet Anglicana,
Affirmat quæ Romana	Videntur mihi vana,
Supremus quando rex est	Tum plebs est fortunata,
Erraticus tum Grex est	Cum caput fiat papa,
Altari cum ornatur	Communio fit inanis,
Populus tum beatur	Cummenoa vina panis.
Assini nomen meruit	Hunc morem qui non capit,
Missam qui deseruit.	Catholicus est et sapit."

Washington City.

I hold for faith	What England's church allows;
What Rome's church saith;	My conscience disavows.
Where the king is head,	The flock can take no shame,
The flock's misled,	Who hold the popa's supreme.
Where the altar's drest,	The worship's scarce divine,
The people's blest,	Whose table's bread and wine.
He is an ass	Who their communion flies,
Who shuns the mass,	Is catholic and wise.

G O D.

BY C. M. F. DEEMS.

His power!—a word, and from the deep
This earth, with beauty rife,
Shook off the incubus of sleep,
And started into life.

He spake: and radiant floods of light
Came streaming o'er its gloom,
And sweetest flowers spread to the sight
The richness of their bloom.

It measured out the billowy sea,
It piled the mountain high;
His power has caused the stars to be—
"Tis written on the sky.

His voice!—when gently breathes the morn,
The voice of God is there;
Its accents, too, are softly borne
Upon the evening air.

The deep-toned cadence of its wrath,
Speaks in the thunder's roar,
When strides the storm-sprite o'er his path,
And shakes the trembling shore.

But, oh! its deepest melody
Breaks on the troubled soul,
When first it sets the spirit free,
And makes the wounded whole.

His presence!—if there were a spot
Of earth on which we dwell,
Where it were said that God is not,
That spot would be a hell.

His presence fills the heaven of heaven
With its supreme delight,
And from his dazzling throne is given
The glory of its light.

Creation quakes beneath His frown,
Worlds fly before his nod;
The boundless universe must own
The presence of its God.

FRANCIS ARMINE—A ROMANCE.

BY A NOVICE.

CHAPTER VII.

'Tis a time

For memory and for tears. Within the deep
Still chamber of the heart, a spectre lifts
The coffin-lid of Hope and Joy and Love,
And bending mournfully above the pale
Sweet forms that slumber there, scatters dead flowers
O'er what has passed to nothingness. Geo. D. Prentice.

Why turns her brow so pale—why starts to life
That languid eye? What form, before unseen,
With all the spells of hallowed memory rife,
Now rises on her vision?

Anon.

How mournful is it to realize the truth that Death, the slayer, has laid his cold finger upon the young and beautiful, and swept them from the earth forever. It is mournful at all times! but when his dread wing has been flapped over those with whom we were associated by the deep feelings of natural affection, or the tender ties of love, it is doubly mournful! How mournful and how bitter is it to enter the darkened chamber, and mark the awful change that has passed over forms which, perchance, on yesterday moved gaily and happily down the great stream of life—to behold the lip on whose words we lingered, mute and still—the heart, whose beatings were all in unison with our own, motionless and calm—the hand, with whose every touch we were familiar, dull and heavy—the pulse that swelled in warmth and freedom, throbbing no more—the eye, whose glance had often met our own, glazed and fixed—the smile that once interpreted our lightest wish, departed—the brow cold—the breath choked, and the frame pressed in the mouldering coffin, where the worm will feed upon it, and where the cold damp earth will rot and decay it.

There was sorrow and death in the dwelling of Morton. It was a strange contrast between the joy and brightness of the outward scene, and the gloom and sadness of that house of mourning. Sweetly and beautifully had the light of another day trembled from the distant portals of the east upon the earth. That light streamed through the closed curtains of the chamber, and fell upon a bed on which lay the unconscious dead—the father and the child. Though the death of the former had been a violent one, he seemed to have passed away without much pain. His features were calm and settled—the hands, that had performed many kind deeds, hung heavily at his side—the eyes, that had looked love and affection, were dull and rayless—the form, that had moved among the living but a few hours previous, in manly pride, had returned to senseless clay: and the young girl, that Francis Armine had innocently robbed of life and sent to her long resting place ere the world had withered her affections, seemed as though she had fallen into a gentle slumber. How many sweet thoughts went down with that beautiful child to the voiceless grave! Thoughts of home—of happiness—of joy, and peace,—thoughts, that may not yet have burst forth, and awaited but some genial touch, to make them flow like cooling waters from the rock of old,—thoughts of love and affection, that had not yet clustered around that pure mind—and that, alas!

will know no voice until awakened in a brighter world. Peace to that young heart—rest to that fair form!

The wife and the mother sat there. She was so no longer. Many trials had she gone through—these were the heaviest,—many afflictions had she passed by—these were the bitterest. The window at which Mrs. Morton sat, commanded a view, which at that hour might well have attracted her attention. But her thoughts flowed in a far different channel. The themes on which she mused, were dark and melancholy; and as they, one by one, glided before her, and gave way but to new doubts and fears, the tears of affliction gushed from her eyes, and swept, drop by drop, down her pale cheeks. There comes an hour to all, when hope, though an evergreen, blooms in vain—or blooming, as it springs up is withered by the hot winds of despair!

It was the morning of the day on which she was to witness the remains of her husband and her daughter placed in the grave. Many were already gathered around the house. As she sat in the recess of the low window of the room, and looked forth upon the people beneath, their words reached her ears. They were speaking of the child's death, and alluding to its guiltless murderer.

"Of what country was he?" inquired one.

"An Italian," was the answer.

"What was his name?" asked another.

"Francis Armine," was the immediate reply of many.

Mrs. Morton heard no more. At the mention of that name, a sudden dizziness came over her, and she swooned away.

The funeral procession swept on. First came the bier, drawn by two black horses, and surmounted by dark and gloomy plumes; then followed the principal mourner, with the relatives of the deceased. The venerable clergy, with whom Morton had been associated, came next, with slow and measured tread. Next came a great number of little children, the acquaintances and schoolmates of the deceased daughter, chanting, as they walked along, a low and plaintive song, and at moments changing the air to one thrillingly sweet and touching, which sounded like tones of hope bursting on the despairing mind; then could be seen an immense multitude of citizens drawn together in sympathy for the survivor.

And thus the procession moved on. It had swept through the streets of Paris—thronged with awe-stricken spectators—and wherever it moved, the gay laugh of life was stilled, and the hum of business was hushed. Already had it passed through the city and reached the heights of Charron, on which is situated that quiet resting place—the last and silent home of the illustrious and noble dead—Père la Chaise.

That funeral train was a melancholy spectacle. The dreary bier with its death-like plumes—the mourners—the clergy—the children, and the long line of citizens, as well as the perfect silence that reigned around, rendered it sacred and solemn to the most unfeeling spectator. The song of the children had ceased—the cry of the mourners could not be heard, and the whisperings of the assembled multitude were hushed. All was still—awfully still—within the city of the dead. The

mourners stood around the graves—the coffins were lowered—the earth was dropped upon them, but its hollow sound could scarce be heard amid the loud and piercing lament that then went up as if from every lip.

And now the vast crowd of carriages and foot passengers moved homewards—stream upon stream rushed from the heights of Charron, down towards Paris, and in a short time nearly all of that dense and crowded crowd had disappeared.

But Mrs. Morton, overcome with fatigue and sorrow, sat in her carriage alone, and moved slowly towards the city. She seemed lingering to gaze upon that spot to which the living never turn save in sadness. At this time a change came over the scene. The clouds that had before passed along silent and unnoticed, now swept swiftly over the southern part of the sky. A low yet distant thunder was heard—the air, before refreshing, now became sultry and oppressive—and then suddenly the bending pines gave warning that the tempest would follow. And it did come. Masses of thickened clouds rushed in gloomy ranks up the heavens, and contended, like giant gladiators, in the savage and convulsive struggle—nearer and nearer shouted the thunder—swifter and swifter flashed the many-forked lightning, and darkness mantled the outstretched wall of heaven—above and about the earth it descended in one far-spreading intense banner of gloom—when the spirit of the tempest moved abroad, and shook out his rainy shroud upon the earth, and fast and fiercely it poured and fell. It lasted but for a short time, and ere it came again, a horseman dashed by the carriage of Mrs. Morton. As he passed, the whole earth was lighted up with an intense and brilliant glare. That light enabled Mrs. Morton clearly to see the horseman. As she did so, a gladness beamed upon her melancholy countenance. Her heart was in her eyes; and as they gazed, the warm tears of joy fell unconsciously from them. "Do I dream? No—no! It is him! That form, I could never forget it! Would that he were nearer! Would that I could again hear his voice! I will!—I will!"

At that instant the carriage struck violently against a huge rock in the road, and suddenly overset. The boy driver, escaping unhurt from the vehicle, hastened to assist Mrs. Morton, and found her thrown some distance from the seat and senseless.

CHAPTER VIII.

My mind misgives

Some consequence, yet hanging in the stars,
Shall bitterly begin this fearful date.

Romeo and Juliet.

Since I came hither I have heard strange news.

King Lear.

"Softly, softly—here approaches the captain. Should he witness your mutinous arm raised so high, be sure he'd tear it off and beat you to death with the bloody stump," said a little man, evidently of the lowest order, to one of the same stamp, as they stood in the door of a small house on the road side, near Paris.

"Hist!" returned the companion, looking at the captain, who was near the house; and sinking his voice, "Allen, you sly dog, the captain may be tyrannical, but

he would'nt make such a sorry spectacle of a friend who has served him like a brave fellow through all his little spees, and so forth, on the road."

"He would though. To be sure he was very easy, when our company first selected him; but splice me if he has'nt become the tightest rogue that ever backed a horse in the glance of old Oliver.* He shot that great preacher the other night who was buried to-day; and, I'm told, has said that he intended to quit us. France is getting too hot for him, and he'd better leave it."

The robbers became silent, for the person of whom they were speaking, had joined them. He was about the middle height, of a sinewy frame, and presented altogether a brave and chivalric bearing, well calculated for the situation of captain of the followers of Robin Hood.

"Ha! Captain Montanvers."

"Well, my merry men, how fares the lady since I left her?"

"Better, far better, captain," replied Allen.

"Hush! hush, man—not so loud. Go you Allen to the common yonder, and inform me when any traveller comes in sight. I have suspicions that some one has blabbed on us—go you—quick."

And he departed, chanting such rude ditties as this, as he walked along—

"Much sweeter than honey
Is other men's money!"

Some time elapsed ere Mrs. Morton was conscious of her situation. During the night she had talked and raved and suffered—she had, in her delirium, spoken of events and named names, which none but the captain of whom we have spoken knew, and which of course none but him understood. When she awoke, daylight was streaming into the window of a room of which she was the only occupant. She looked around, and wondered where she was, and then her recollection returned, and all the grief that had weighed upon her spirit again came rushing back like the chilling waters of some mighty stream.

"Where am I?" cried she, rising from the bed. "My brother—my brother—surely I have seen him. No!—it was but a dream!"

A man entered—it was Allen.

"Your service, madam," said he, bowing low. The captain asked me to thank you for your condescension in honoring his humble roof, and says your carriage is now at the door, which, thinking you might wish to return to your home early, he had sent to the village and repaired."

"Thanks—many thanks—it is already late, and I will start immediately. To whom do I owe this hospitality?"

"Why, madam, it was nothing but right—seeing that the night was dark and stormy, and your carriage broke down. I hope your ladyship was not hurt, although you looked awful pale when we found you. This is captain Montanvers' house, and I am sure that any one in distress is welcome here."

"Could I see that gentleman, and thank him personally for his kindness?" asked she.

"Oh! no, madam: the captain is—is unwell;" and as he spoke he walked towards the door. The lady fol-

* The moon.

lowed, and was soon in her carriage and on her way back to Paris.

Montanvers stood in a side door where he could not be seen, and watched the receding form of his guest, until the carriage moved away.

"I would not see her," muttered he, "fearful that she would know me. Now for Paris. My brave men," said he, addressing some dozen men who were lolling on the green sward before him, "I am about leaving you for a short time, and when I again join you I trust that all suspicions, which have arisen of late from our bold manœuvres, may be lulled, and that I may return, favored by that fortune which always favors the brave and the bold." So saying, he took up his way towards the city.

CHAPTER IX.

Then might my breast be read within,
A thousand volumes would be written there.

Earl of Sterling.

There hath arisen betwixt us
An immortality of hate. Old Time
Shall sink to dotage and forget himself,
And pity cling unto an usurer's breast,
Ere he and I grow friends. *Berry Cernoeil.*

Heard you that?
What prodigy of horror is disclosing? *Lillo.*

Behold Montanvers in the full flush of Parisian life! Full of crimes and vices he had again been elevated to that station which he had before forfeited. His brightest hopes had been realized, and encaased as was his conscience in a hardy stoicism, which even the sharp tooth of remorse sometimes fails to penetrate, he again moved among the great herd and seemed above them. Again in the society of the refined—respected by the men—sought after by the women, we turn to contemplate him.

And some will ask, did none of those crimes that stood out boldly on the pages of the past—crimes of manifold natures, which the mind would shudder to contemplate—did they never arise before him to check the full tide of his longings, or sweep away the aspirations of a reckless and a darkened heart, and a rayless and perverted mind? They did! Vice is, has been, and ever will be, pursued by that un pitying monitor, memory, or haunted by that scourging avenger, conscience. When we err for once, we err forever. When we commit one dark crime, we secure to ourselves a doom more terrible, a fate more awful than he who signed the death-bond with his reeking blood. And why is this? Because the memory is undying, and the images which it brings up, for good or for evil, are its only "still small voices" to comfort or to damn the possessor—to the one, it brings sweet incense—on the other, it inscribes in every lineament, as with the fangs of scorpions—"Beware." Montanvers had passed the Rubicon of crime, with a bold and daring stride, and was now an outlaw of virtue, to be shunned by mankind, as the brave mountaineer shuns the evil shape of the omened wraith.

Henry Montanvers had been reared in the midst of opulence. He was an only child, and was remarkable, when a boy, for quickness of invention and consummate

hypocrisy. At that age, when the flower of the heart had not been cropped by the influence of debased associates, he had displayed a cunning, which at school won for him a reputation among his classmates, which, with the natural bent of his mind, tended to unfit him in after life for that straight path which alone leads to happiness and peace. Was there an orchard to rob, or a bird's nest to plunder, or an "affair" to manage, Henry was the chosen one. In his eye was the subtle fire—in his tongue was the oily eloquence—and in his arm was the ready movement, which suited well the leader of a band of reckless schoolboys. At twenty-one he had grown prodigiously vain—swore that youth was the time for pleasure—old age the time for repentance and soberness—that England was too small for an ambitious gentleman—that the world—the great and boundless world, was the fit arena for any but a coatless curate, or a simple squire; for such as him, the drawing-room of the world, and the huzzas of crowds, the only scene, and the only triumph. He accordingly scorned all occupations, wherewith to gain an honest independence, and travelled. As a matter of course his purse grew as light as his conscience, both of which were melting away very fast. In a little time he was seen in Florence, without money, and of course, from his former habits, without friends.

Every day his situation was becoming more unpleasant. He was in the midst of plenty, and lived from hand to mouth, until starvation stared him in the face. One evening, at the solicitation of his only remaining acquaintance, (the rest had cut him—Oh, money, thou god!) he was induced to enter a well known *roulette* club in Florence. He sat down, and lost and lost again; and borrowed and lost again. He was now in debt several hundred pounds. To extricate himself he borrowed again, and again lost. He was not only bankrupt; he was deeply involved, and in a strange and friendless city. What was he to do? He looked around the room and all shunned him. Delirious from his many losses he left the club, sought his own room, and opening his pistol case, loaded one, with which he was about to blow out his brains, when it was wrested from his hands. He turned, and beheld in the intruder, his acquaintance of the club.

"Montanvers," said he, "I have come to relieve you. You are deeply in debt—you want money. An old gentleman of wealth has just been informed of his wife's illness in a neighboring town, and starts to-night to see her. He carries a large quantity of money with him—the night is dark."

He consented to accompany him, and share the spoils. He went—the robbery was committed—the old man, who had once been an intimate friend of his, recognized him, and threatened him with exposure—it cost him his life; and with that deed commenced a long series of crimes too appalling for narration.

And now behold him moving among the polished and the refined. Success had crowned his villainies, and he was again enabled to throw aside the costume of the outlaw robber, and assume that of the humble citizen—his former mode of life unknown and unsuspected, save by one—and to silence that one, was one of the objects of his present disguise.

On the day succeeding the date of our last chapter, Henry Montanvers (we will not trouble the reader

with his various aliases,) was to be seen moving through the most solitary part of the suburbs of Paris. The path which he had selected was private and secluded, and passed through a thick and dark wood. He had strolled alone for some time, with seeming carelessness, and was then near the centre of the wood, when he espied a hat hanging on a bush—he approached with a slow and noiseless tread, and beheld through the thick clustering trees the object of his search, Lucien Andeli, laying on the grass, in so deep a study as not to notice his approach.

Andeli was alone, and was unconscious of every thing but his own thoughts, when suddenly a ball aimed by an unseen hand, whirled by him and lodged in the trunk of a tree by his side. He turned to the place from which he heard the report of the pistol, as it was discharged at him, and beheld a tall athletic figure, but the place was so dark that he could not recognize the features, and could scarcely see the face of his foe. He did not wait for a deadlier aim, but sprang forward, and in another instant that foe staggered from the effects of a heavy and well directed blow, and fell to the earth. A glance sufficed to show Andeli that he stood before Montanvers.

"I spare you, sir," said Andeli, in a tone that went to the heart of his foe—"I spare you, sir, as much as you deserve death, to reflect, ere you again stain your hands with blood. From me you have nothing to fear; but I warn you now to urge me no more to arrogate to myself that diviner power which sooner or later must overtake you. Great Heavens! I pray that this unhappy man may have atoned for his many errors and crimes, ere he enters the presence of an awful but a just God! Go, Montanvers! go, and search the dark labyrinths of crime and sin, through which you have already passed, and pause amid the desolation and the ruin that you have wrought, and be warned by one who was once your best friend, of the miserable doom that awaits you in another world. Pause and reflect, if but for an instant, and you are saved!"

"Lucien Andeli," was his only reply, spoken in a harsh and hoarse voice, as he glared upon him, "I have failed this once, but your doom is fixed! Look—look! I swear it!"

Montanvers had arisen, and was retracing his steps from the wood, when he turned and gazed in the face of Andeli.

"Remember, Lucien Andeli," he said, in a voice almost choked with passion, "your doom is fixed. By Hell! I will have your heart's best blood! I have sworn it!"

And he moved away. His hatred towards Andeli had not been of a moment's growth. They had in early life been rivals, and Andeli the successful. It was a hatred that one day will not bring forth, but like the poisonous flower that grows in the east in the darkest caves, requiring years to unfold, slowly, but surely, its deadly leaves. It had sprang up in the lonely recesses of a morbid heart, and was kept there unconsumed and nourished in the general wreck, as the mother might nourish her youngest idol in the darkness of a remorseless pestilence. Andeli knew this, and despite his bravery almost shuddered as he heard that voice.

The day was drawing to its close when Montanvers

proceeded back to Paris. Who can tell the fearful thoughts that came over that stern man, as he threaded his way through the streets of that city? Who can say what were the elements that then struggled in that fierce heart? Who can paint the terrible passions that nerved that fore-dooming hand? None should try it. Those fiery and savage passions were raging within, concealed by a mighty effort, and traced not on a haughty brow and a reckless lip.

"Andeli, Andeli!" muttered he, as he walked along. "Curses on him! He knows me well, and has already upbraided me. Ever since that fearful deed, that he alone knows of, that accursed name has been a dark cloud upon my life—the blighter of my sweetest dreams—the destroyer of my brightest aspirations. Andeli! how the very name festers upon my tongue—it rings in my ear like a death knell! It must not be. He dies! Another, and yet another, to the long list, and I can live undisturbed. To kill him—to take with his own another's life—paha! it were easier to—down, conscience! He must die! Will I do the deed? And she—ha! I will have most sweet revenge! If he lives I am forfeited to eternal disgrace. I'll crush him—but the means—the means."

He entered one of the news-rooms, to be met with in almost every street of Paris, and had scarcely seated himself, when the *Evening Courier*, one of the best papers of that day, was thrown into the door. He snatched the paper up—in those times as in the present, newspapers were the only link that connected mankind with the great, tumultuous, ever-changing world—and had glanced over the columns, when the following words met his eye:

"ARRIVAL OF FRANCIS ARMINÉ.

"Most of our readers are, perhaps, aware that this distinguished gentleman has arrived in our city. For a more complete notice of his arrival, we refer them to an editorial in yesterday's paper, detailing all the circumstances that occurred to him, as well as the accident near L'Etoile, which, at that time, created the deepest sensation amongst our citizens. We are, however, happy to learn, that the excitement then evinced has passed away, and sincerely trust that it shall not become our painful duty to notice, as public journalists, any further outbreak of our citizens against the innocent offender, whom, with a complete knowledge of all the circumstances of the accident, we do not hesitate to pronounce entirely guiltless.

Postscript. Since the above was in type, we have learned from a secret source that the object of the present visit of this talented gentleman is, if possible, to hear of a sister whose mysterious disappearance from her home we recorded some five years since. It was then supposed by some that she had been murdered, and that measures had been taken to thwart all endeavors to find out her fate. We trust, however, that those suppositions were incorrect, and that the brother and the sister may yet be united."

Montanvers read this over several times, and with the names and events spoken of by Mrs. Morton, during her delirium at his house, revolved over, he arose from his seat. When he did so it was with a prouder tread. A sudden hope had flashed across him—the dark frown departed from his brow, and his whole

countenance was animated with a glow of triumph. Fate did indeed befriend him!

"Ha! well counselled," thought he, gliding from the room into the open streets again. "The means I have. Andeli, from you I will indeed have nothing to fear. I crush that one, and the vine that has twined its tendrils around it, falls too. Tremble thou, Andeli, for now thou art doomed."

Plot on—plot on—dark man! Weave the web around the innocent, but be sure that thou art not thyself caught! Fly swiftly on the wings of mighty mischief! Make sure thy footsteps on the topmost crag of the precipice; for if thou fallest, farewell ye laurels, and a long farewell ye myrtles!

CHAPTER X.

They met, all innocence—and hope—and youth:
And all their words were thoughts,—their thoughts pure truth:
Every new day that pass'd, pass'd them the faster,
And hours though sweet, were chased by hours still sweeter:
Love had adopted them. *The Garden of Florence.*

A tale of thine, fair Italia!

A tale of sorrows—for e'en on thy bright soil
Grief has its shadow, and care has its toll.

L. E. L.

It was a lovely evening. On the velvet turf, and spangled with the dew of evening, lay the manifold flowers of every hue and fragrance, with which the rich bottom lands of the Seine abound. The tall trees were clad in summer's brightest foliage—among which the bland air stole—

"Making sweet music while the young leaves danced;"

and those green, green leaves, were vocal with the hum of insects and the song of birds. Far, far away, opened one of the richest landscapes of that lovely clime, valley and plain, and woods and waters, bounded by a faint, blue outline of numerous vine-clad hills, which lay in quiet relief against a most brilliant sky. And that sky, that unrivalled, deep blue sky, was without a mist or color—save where in the far west it touched a bed of clear and limpid water—and there it was glowing with those purple and golden tints, which, reflected over that enchanted earth, add much to the beauty and loveliness of a sweet summer evening.

On such an evening Meta sat with Andeli in their cottage. The little fountain still threw up its sparkling waters, that fell in showers upon the rich and odorous turf near the door of the cottage, and the bright stream still swept through woods and vales, and groves, and wending gracefully around the home of the lovers—as if it too desired to sweeten the moments of such pure and hallowed loves—wandered on to yield its tribute of waters to the imperial Seine.

Her lover sat at Meta's feet, and gazed up to that sweet and child-like face, whose every feature seemed yet breathing the song, which a voice marvellously clear and sweet, had just warbled to the accompaniment of a harp. Ah! those were happy, happy moments! They were both young—both the children of the summer. And that fair, bright creature, how deeply, how fondly she loved—how breathlessly she hung on every tone of that voice! Never—oh, never!

too, had he loved so wildly as he did now—never, as the young painter-boy, had he dreamed over a gentler or a warmer feeling than that which now intoxicated him!

"Mine own Meta—my beautiful—my adored," whispered Andeli, drawing her small and snowy hand within his own. "Your song is sweeter than when you sang it in the golden past."

"Why should it not be? It is sung to you—and saving you I have none to cling to in the wide world."

"None—none! Your's may be a bitter fate, Meta."

"Not while you are with me."

"And have you never tired of me?"

"Ask the flower if it wearies of the light."

"I am happy indeed."

"And I am doubly so."

"But come, dearest, let's to yon shadowy banks and enjoy the hour."

And they sallied to the spot that Andeli had remarked. The sun was sinking in the west, and poured its golden light along the tops of the tall and noble trees, leaving the mossy turf beneath shadowy and pleasant.

"What a delightful evening is this!" said Andeli, "how calm—how lovely! There—there, by that light you look younger than ever." They had seated themselves on the fresh turf under the shadow of the old trees. Before them was the little white cottage—the cottage of love. Ah! if those walls had tongues, how sweet the tales they'd tell. Around them arose the murmur of nature, sweeter than love's first whispered tones—the breath of leaves—the tinkling sigh of the sparkling waves—what music for the young lovers was here!

"Meta," said Andeli, drawing that slight and beautiful form nearer to him, "I remember that on such an evening as this, some two months gone, you promised me your history—I fain would hear it now, sweetest."

"Yes, Lucien, yes! it is right that you should hear it," replied Meta, "and now, even on this lovely spot, and by this softened light, I'll tell you. I will not dwell long, dear Lucien, upon such painful memories—my life is all sunshine now."

She looked sweetly up from the breast of her lover, on which she had cast herself, and thus began:

META'S HISTORY.

"I was born on the borders of Tuscany. You might have traversed all Italy for a more beautiful spot in vain. Nature seems to have enriched that region with the loveliest objects in her great store-house—bright, green earth—perfumed air—transparent water—dream-like skies.

"After a youth spent in travel and dissipation, my father returned to his home, and married the daughter of a noble house, whose lands adjoined his own. Some two years after their marriage they left their first residence, and chose for their retreat the spot on the borders of Tuscany, where I was born. At my birth my mother died, and my father—who desired that the first of his children should be of his own sex, and entertained, from the moment that I saw the light, the most bitter feelings for me—was plunged still deeper in his dislike by her death. Never after that event did he wed another, but living in seclusion and privacy, strove to forget that world in which he had once mingled as

one of its gayest and happiest citizens. There comes to some an old age of the heart, darker and more desolate than the real winter of a long life!

"I pass over my childhood. I was educated by an old tutor at my home, which I scarcely ever left, but spent what should have been the happiest hours of my existence, in idle study or endeavors to win that love from my father which he wrongly withheld from me. All was in vain. Every effort that I made was repulsed, and often, often have I, when I left him, retired to my own room, and lifted up my voice to Heaven to reconcile him to me—to grant me his friendship, if not his love. Such are some of the memories that come upon me as I turn to survey that childhood. I hasten over them. At the urgent solicitation of the relatives of my father we removed to Florence. I was at that time fifteen, and an heiress. The latter consideration was enough of itself to attract the butterflies that swarm in that fair city. I was, however, cold to their homage, and heartily despised the common-place affections of those who aspired to my hand. It will seem strange that one in my isolated situation should be so indifferent to the love of others. It was still stranger to mark the carelessness with which I received offers of marriage, and the cool indifference with which I rejected them. It must be that my dark and desolate condition caused me to throw aside the flowers that were strewn along my path, and dream of the roses of that elysium of love in which I now repose! At length came one rich and noble—he poured forth his adoration—he followed me wherever I went—at the opera, in the dance, and in the parlor, on every occasion, for months, he proffered his suit. He too was rejected. On the day that I rejected him, a note from my father, stating that he had watched my course and had disapproved of it—told me that I was the betrothed bride of Sir Henry Montanvers."

"Sir Henry Montanvers!" echoed Lucien.

"You start—you shudder!" cried Meta. "You know him—do you not?"

"Go on—go on, Meta."

"I was the promised bride of one whom I had never seen and could not love. I struggled to break the unhallowed pledge that my father had given, and I was laughed at. I threatened my own life rather than leave the altar as his wife—he smiled, and told me to prepare to meet Montanvers. *And I did prepare to meet him.* I prepared to meet him as a legitimate daughter of Italy should meet the man she hated. Lovely, lovely Italy! And thou loveliest portion of Italy, beautiful Tuscany—ye gave me the glowing feelings—the restless imagination, and the ardent and fiery spirit. Fatal—fatal gifts! Montanvers came. I threw off all hypocrisy at once, and repulsed him. It would not do. He urged my father's vow. My hatred grew stronger, and in its greatest extremity I abhorred, and almost cursed that father. No, no! I could not—I did not curse him. Although he had taken away hope and happiness—although he had crushed all my desires—frustrated all my wishes, I still endeavored to look beyond the clouds that surrounded me, and trace a calmer, perhaps a brighter scene for the future. I was seated one evening in a bower in a distant part of our garden, musing upon the troubles under which I labored, when on hearing a slight rustling among the

leaves near me, I turned, and Sir Henry Montanvers stood before me. My first impulse was to fly, but it was impossible.

"Meta, dear Meta," he said, "hear me for this once. You have wronged me deeply. Why do you hate—why do you despise me? Again, I ask you to hear me: and if you can, against the wishes and prayers of your father, reject me again, do so."

"Sir Henry Montanvers," I replied, "you have stooped to actions beneath the dignity of any gentleman. Do not force me to speak more freely to you. Why do you again proffer the hated suit that I have more than once sworn never to accept?"

"But you may change."

"No, sir, never! I have said it!"

"Proud girl, you shall be mine!" he returned, with a smile of triumph, which I shall never forget. "You shall be mine, or you are both houseless beggars. Your father's estates are mortgaged to me for debts contracted no matter how, before his marriage. To liquidate which debts he has pledged yourself. Meta, I know that you despise me—you shall do so no more with impunity—you shall be mine!"

"No more—no more, sir," I replied. "Your words convince me how base and contemptible you are. I have said that I would never wed you, and I now swear that no circumstances will ever induce me to change that resolution. Out of my sight, sir."

"I go, haughty girl," he said, "I go, but what I have said shall be fulfilled," and he disappeared. I heard his retreating steps no more, ere I sought my own room. Pale and breathless—stunned by the intelligence I had received—overwhelmed by the meanness of my pretended lover, and the baseness of my unnatural father, I threw myself on the first seat I met. I had sat there perhaps an hour when the door of my room was gently opened, and a too well known manner told me that my father stood before me. I shall never forget the sternness of his countenance, when, for the first time since our removal to Florence, he entered my chamber. He seated himself by my side, and spoke in tones of tenderness that I had never before received from him. He urged me, as I valued my happiness and his feelings, to forget the hatred which I entertained for Montanvers, and accept his suit. He urged, but it was to a cold ear.

"Father!" I said, "your request cannot be complied with—I will not wed Sir Henry Montanvers."

"Then hear my commands!" were his words, spoken in an agitated and passionate voice. "You have withered my hopes—you have blighted my prospects—you have been despised since your birth. Our house has fallen—our home, mine no longer. I am an exile and you are the destroyer. May the fountain of your life be tainted—may you wander alone, and despised on the earth—may the ruin which you have wrought, forever haunt you. I, your father, invoke this curse upon your head. Forget your relation to me—and thus devote you to a life more terrible than death. Leave me—leave me immediately and forever! I will not spare, and may I never more see you. Away—away!"

"With that curse still quivering on his lips, I left him. I had dreamed of hope, and now my dream was broken. Convinced of the deeply rooted hatred of my father, without considering of the future, I resolved to obey his command never to see him more. At dusk, when no

one would be moving abroad, was the selected time to put that resolution into execution. I was afraid that Montanvers might observe, and frustrate my plan, and therefore chose that hour. Accordingly, when it came, I noiselessly left my room—descended the stairs—and was soon beyond the outer gate—standing alone in the silent streets of Florence. I had walked some distance in safety, when I heard a voice well calculated to terrify me—it was that of Montanvers.

"Why, how now, my young rover; whither do you hurry at this hour? I'll be sworn there's some intrigue on foot," he said, as he approached me. I turned to escape—it was too late. His attendants overtook me, and were tearing aside my veil as he came up.

"Ha! sweet fortune, at last you befriend me. Hush, fellows! We have a rich prize. Away with this girl to the cottage on the Appenines." From that instant I heard no more.

* * * * *

"How long I was unconscious I know not. When I awoke, I looked around. It was night, and the surrounding objects were scarcely perceptible. I was in the 'cottage of the Appenines,' as he had called it. It was an antiquated building, and rather dilapidated. The room in which I had slept was covered with tapestry, and the walls with shining arms and rude dresses. An immense oak table, with some huge chairs, were its only furniture. A pine torch was burning on the hearth, but it gave but little light, and as I was looking at it a gust of wind put it out. All was darkness. I arose and went to the casement of the cottage. A glorious landscape was stretched out beneath me. The dark and tall Appenines threw up their sky-cleaving peaks on high, and ever and anon I could hear the rush of distant mountain streams sweeping through ravines and over precipices. There was something magical in the sight that caused me for a time to forget my true situation. I was thus gazing on that strange and majestic scene, when I heard a tread near me which caused my very blood to stand. It was Montanvers.

"'Meta,' he exclaimed, 'I have said you should be mine. Lo! you are. You have heard—who has not—of Lovett, the terror of all Italy—the very recital of whose daring exploits has so recently alarmed you. Before you stands that robber chief—around you behold his faithful band sleeping within their own fortress—above you gaze upon his well-tried sentinels, the eternal Appenines.'

"These words—the place—the hour—the silence around—all conspired against me. I trembled before the man whom I now despised.

"'Now,' said he, with his usual smile, 'now thou art mine. What a companion thou wilt be to roam with along those mountain sides. What an eye thou hast—let it laugh on—it will encounter many a lovely sight. And that form—what a form to contemplate in the clear waters of yon star-lit stream! Farewell—my bride—farewell! I will return ere day shines over yon mountain's peak.'

"Waiting for no answer, he passed on, closed the door and locked it. I was a prisoner in the robbers' haunt, with that impassable barrier, the Appenines, like evil omens between me and hope. But I did not despair. I have said that the walls were covered with rude dresses. Hastily I tried them off, and found one

to fit. In a moment almost I was dressed in the garb of the robbers. From the many arms that lay around me I selected two pistols, fearing that I might be forced to use them, and being determined to escape, or at least never again enter that house. A rope ladder was near. Every thing favored my escape. I jumped into the window, flew down the ladder, and had approached within about twenty feet of the ground, and found that I had reached the end of the ladder. Here I was at a loss what to do—but resolved to escape, I consigned myself to the care of God, and let go my hold. I was for some moments stunned by the fall, but recovering, looked around me. I had alighted on a gloomy and rugged spot. A horse was loose near me—I sprang with a single leap on his back.

"'Seize her, my men! Seize her!' shouted a man, starting from a thicket of densely massed trees; and, in another instant, I discovered four or five dark forms in the back ground. I had scarcely time to breathe again ere the men rushed up, but the horse saved me; for becoming frightened, away he flew like the lightning. A ball—another and another whirled by me—but at every leap my horse gained additional speed, and I was soon beyond the further pursuit of the robbers. On, on, we flew. Suddenly the horse quivered and snorted, and again the faithful courser quivered dreadfully with fast failing limbs and glassy eye. Again it sprang fiercely onward—spurred the ground with conscious pride—staggered from exhaustion, and dropped down dead. I was alone, and leaning over the once stately steed, when I heard the sound of approaching steps. I was certain that they were those of the pursuing robbers. I was then on a peak of the Appenines—a deep ravine was beneath me—this was my only chance of escape. I had no one to sigh for me in this world, and death I thought preferable to a life of misery. The footsteps came still nearer. I knelt down in that scene of solitude, and offered up a weak prayer—in that magnificent temple of worship, with the outstretched Appenines as its altar—the surrounding firs its groups of kneeling worshippers—the tall white cataracts, thundering from their deep and invisible depths, its mighty organs—the cry of eagles and strange wild birds—the shriek of the jackal and fox—the roar of the fell avalanche—its solemn choir—and all the stars of heaven its sacred and perpetual lamps.

"Nearer and nearer came the footsteps; and bidding an eternal farewell to this beautiful spot of earth, enchanting Tuscany, I leaped forward! A dizzy recollection of chasms and ravines came over me—my brain spun around—my eyes closed. I fell.

* * * * *

"A musical and thrilling voice awoke me. It yet sounds in my enraptured ear! Amid the gloom of the wilderness a light broke forth! In the night a star had arisen! I loved, I loved from the moment that I awoke. Yes, my deliverer, my benefactor, from the moment that I awoke, through joy and through sorrow I have loved but *thee*, Andeli. It was my *first*—it will be my *last* love. My history is told."

She ceased, and Andeli then knew in his heart, if he had ever doubted it before, that he was beloved.

Ah! ye young lovers, if your historian pauses for an instant on your past history, it is that he knows the future has no bright fates in store for ye! If he lin-

gers—and it has been but for a moment on your un-earthly loves—it is because he knows such beautiful affections hath but a little abiding place on this thorny and troubled earth, ere they wander to the peaceful heavens. He turns from the ideal to the real—he turns from the quiet vales and the unclouded skies, to the cloud, the mountain, and the avalanche! and yet he would fain listen to the gushings of your young hearts, ere he portrays the harsher and the sterner passions of this noisy world. In bitterness, and in loneliness, he turns from ye, and fain would longer dwell on that rare and gentle affection, which, when it burns no longer, will cause every nightingale to pine, and every angel to weep!

STANZAS.

I.

A dark-eyed flower with leaflet pale,
I found it in a shady vale,
Afar from vulgar gaze it grew,
And I, alone, the pathway knew.

II.

A quiet sky its shelter made,
And gadding vines its home arrayed;
And near its realm of bower and tree,
Were mansions of the bird and bee.

III.

These, when the summer sun was bright,
Had lays of love, and plumes of light—
And songs were ever in the vale,
And sweetness on the swelling gale.

IV.

Yet not for love of these I sought,
The sacred and the shelter'd spot—
I heard no song of bird or bee,
Unless that flow'ret heard with me.

V.

From worldly toils and worldly view,
To seek that flower my feet withdrew;
And, day by day, a wanderer still,
I swam the stream and crossed the hill.

VI.

It was a worship led me there,
For love is still a thing of prayer—
And thoughts of truth, and hopes of Heaven,
Are to its humblest fancies given.

VII.

And in my soul that dark-eyed flower
Possess'd a spell of sacred power,
Nor had I pluck'd it from its rest
Unless to shrine it in my breast.

VIII.

Nor had I placed it there to gain
A simple healing for my pain,
Unless, with purpose, pure as true,
To make it whole and happy too.

IX.

And still I came, but dared not speak;
My heart was full, my tongue was weak—
I came to worship—to implore,
Yet left her, silent as before.

X.

Yet wand'ring far mid crowds of men,
My spirit was not absent then—
My thought was in that vale—my heart
Found, in its meanest leaf, a part.

XI.

And with that worship, as I burn'd,
Back to the flower, my footsteps turned—
Still bright and beautiful it grew,
As when at first it met my view.

XII.

Then came a power upon my soul
That would not bear nor brook control;
I felt no more the sweet alarm,
A fire was in my heart to warm.

XIII.

No longer could I keep the flame
Close hidden, which I did not name—
I bent my knee—I burst the thrall,
My tongue was loosed—I told her all.

XIV.

And she—Heaven bless the maid!—she smiled,
And wept, until my heart grew wild—
Her hand was in my own—her waist,
Within my folding arms embraced—

XV.

And then she spoke, and I was blest!
Ah! wherefore need I tell the rest—
That dark-eyed flower is mine, yet none,
Of all that lovely vale is gone.

XVI.

There still the bird and bee are gay
With glee some music all the day,
And if they pause, 'tis but to hear,
A sweeter voice upon the air.

W.

POPULAR ERRORS.

1. That a contract, made on Sunday, is not binding.
2. That those who are loudest or most unceasing in their professions of regard for the People, are the People's truest friends.
3. That genuine courage is shown by vapor or bravado.
4. That it is consistent with the character of a gentleman, to smoke in a stage-coach.
5. That green, or unseasoned wood, is as good for making fires, as dry, or seasoned wood.
6. That, in order to exclude a child from a share in his father's estate, the father's will must give him something, however small; or mention him, in any manner.
7. That hot bread, or any bread less than twenty-four hours old, is wholesome.
8. That excessive familiarity is not dangerous to friendship. When I hear two men, whose intimacy does not date from childhood, calling each other "Tom," and "Nat," I look for a speedy, and perhaps a violent death to their friendship. True friendship is not only shown, but strengthened, by mutual respect.
9. That a lawyer, to succeed in his profession, is obliged to utter falsehoods.
10. That those who are constantly talking of the dishonesty of other people, are themselves honest.

11. That the citation of many books, or the use of learned words, is a sign of learning.

12. That persons who clamor for *practices* as better than *theory*, and are celebrated by themselves and their friends as practical men, are always more trustworthy than those whom they deride as "theorists." The former have usually no guide but their own (often narrow) experience: the latter sometimes have the lights gathered by a thousand clear and active minds, during ages of diligent and enlarged observation. A properly constructed theory is the methodized, the digested result, of what has been seen and done by hundreds of "practical men."

13. That a *first love* is necessarily purer, or stronger, than a second, or third, or fourth love.

14. That keeping the door open in cold weather, is conducive to health.

15. That other people have not as many, or as great causes of unhappiness, as ourselves.

16. That any simpleton will do for a legislator.

17. That a man, whom his neighbors would not trust with a hundred dollars of their own money, is fit to be trusted with the most important public interests.

18. That *education* consists only in being sent to school; or in book learning.

19. That political consistency is shown by adhering constantly to the same men, through all their changes of conduct and opinion.

20. That it is *inconsistency*, to think with one party on some points, and with an opposite party on other points.

M.

'Twill soothe when I am gone.

I.

'Twill soothe when I am gone,
And sad my sleepless lot,
To know, though but by one,
That I am forgot—
That one remembers yet,
Though far and fast I flee,
And it shall chase each sad regret,
If thou art she.

II.

Give me thy lingering thought,
Give me thy latest prayer;
Oh! let thy heart be taught,
To hold mine ever dear.
Watch o'er me in thy dreams,
A guardian spirit prove,
And bless my fortune with the beams
Of thy true love.

III.

As with thee in thy bowers,
Oh! let thy hand entwine,
For me, the guardian flowers,
More beautiful as thine:
And bid their fragrance bloom
To cheer our lonely lot,
Still sweetly whisp'ring, through life's gloom
"Forgot me not!"

G.

A LECTURE

Delivered before the Richmond Lyceum, on Friday evening,
July 12, 1836—by James E. Hoath.*

Mr. President, and Gentlemen of the Lyceum:

Had I taken counsel of prudence, I should probably have declined the honor of now addressing you. My pursuits in life for some years past, have not qualified me for occasions of public display; and I am altogether unpractised in the arts of oratory. You have informed me, however, that the design of your institution, is to encourage literature, science, and general morals; and I feel that I should be recreant to duty, to refuse my humble contribution to so noble a cause.

You were pleased to refer to my own judgment, the selection of a suitable topic upon which to address you, and I have chosen one, which, without possessing the charm of novelty, is at least interesting to us all. I propose to call your attention to the PRESENT CONDITION OF OUR COUNTRY, AND ITS PROBABLE FUTURE DESTINIES; to point out the DANGERS WHICH AWAIT US, and THE ONLY PROBABLE MEANS BY WHICH THOSE DANGERS MAY BE AVOIDED. This, you will perceive, is a boundless field of investigation; one, which has often been explored by philosophers and statesmen; and, if I cannot hope to present to you any of those ripe and excellent fruits which have been gathered by them, I may perhaps be fortunate enough to pluck here and there an idle flower, or to point out some sunny or shaded spot in the landscape, which may not have attracted the observation of more adventurous spirits.

In describing the present condition of our country, it will be necessary to notice some of the more striking peculiarities which distinguish it from other civilized nations. It is foreign to my purpose, however, and would occupy far too much time, to compare it with those great classic states of antiquity, familiarly, but I think erroneously, styled the Roman and Grecian Republics. Such a comparison would be the more unprofitable, since the extraordinary changes wrought in the structure of human society, have left between those nations and ourselves few points of resemblance. The sublime dispensation of the christian religion,—the conquests and settlement of the Gothic nations in Europe—the introduction of the feudal system,—the reformation in the 16th century, which emancipated the human mind from a long night of bondage,—the discovery of the art of printing, and the use of the mariner's compass,—with the important consequences which followed each of these events, have effected a mighty revolution in the moral, political, and social condition of man.

It is not without its benefit however, on every suitable occasion, to study the history of those extraordinary

* We trust that our readers will find in the merits of this discourse, an abundant justification for its republication; though it has been circulated already, by the newspaper press. Its chaste and perspicuous style is a fit vehicle for the valuable truths it conveys: and a happy augury may be formed, of the future usefulness of the young association which has elicited a production so much calculated to excite thought, and to prompt virtuous effort. In mentioning the novelists of America, Mr. Hoath of course omits himself; but what modesty forbade him to do, justice exacts of us—namely, to remind our readers that he is the author of '*Edgemoor*,'—ranked by Professor Tucker, in his address, (for which see our last February No.) among the best of American novels.—[Ed. So. Literary Messenger.

nations to which I have referred. They shine so conspicuously in the twilight of ancient story—they were so remarkable in their origin, progress, and mournful decline, that we cannot fail to deduce from them highly useful lessons, if properly considered and applied. Their example teaches us at least one great truth,—the mutability of all human things, and the emptiness of all worldly grandeur. Greece, which though surrounded by barbarism and ignorance, sprung suddenly like her fabled Minerva, into the maturity of wisdom and power,—Greece, whose volatile and ingenious people, by a sort of inspiration, carried the fine arts, in a short period of time, to the *ne plus ultra* of perfection; Greece, so renowned for her sages, heroes, poets and philosophers, what is she now? Awakened it is true—recovered somewhat from the stupefaction of centuries of slavery and degradation,—but no longer the land of Homer and Demosthenes,—of Aristides and Phocion. Where now is the once powerful Carthage, the descendant of ancient Tyre, whose dominion is said to have extended 2,000 miles into Africa,—whose commercial spirit penetrated every known region; and whose power and riches attracted the envy and hatred of imperial Rome? Where is Carthage? So utterly extinct, that even the curious antiquary is puzzled to trace the spot where that proud and magnificent city once stood. And what is Rome, imperial, gigantic Rome?—that haughty and luxurious nation, which once bestrade the earth like a Colossus, and carried its victorious eagles into every land and among every people who dared to resist its lordly edicts? That great nation—at once so renowned for virtue and infamy, wisdom and folly, splendor and misery, has passed from the earth like a shadow, leaving behind her, it is true, a mighty name—and impressing modern society with her laws, language and literature. A new Rome indeed sprung up after the empire of the Cæsars, which, arrayed in its bloody tiara, and sustained by the thunders of the Vatican, exerted a powerful influence on the destinies of mankind: but behold her now—a feeble and tottering state—almost shorn of her spiritual as well as temporal power; the resort it is true of the classical and fashionable tourist, but immersed in sensuality and crime, scourged by a desolating malaria, and exhibiting all the symptoms of a speedy decline. *Sic transit gloria mundi!*

We turn to a far more refreshing picture, in the contemplation of our own favored land. The first thing which strikes an observer, in glancing at the map of the United States, is its immense territorial extent. Stretching from the British possessions, and the great lakes of the north to the extreme southern cape of Florida, and extending from the Atlantic coast to the territory of Oregon, it presents a frontier line of nearly 10,000 miles, and comprehends an area of about a twentieth part of the habitable globe. Equal in dimensions with Russia in Europe, this great domain is ten times more extensive than the kingdom of France, and sixteen times larger than Great Britain and Ireland. It includes within its boundaries every variety of soil, and almost every degree of temperature in climate; and its surface is variegated by magnificent forests and beautiful prairies, and intersected by noble rivers and majestic chains of mountains. Its mineral resources too, are inexhaustible in amount, and incalculable in value. But, remarkable as are the natural riches and prodigious

extent of our country—no less wonderful has been its progress since the days of colonial dependence, in everything that constitutes the greatness and power of a nation. Its population, which may now be unquestionably estimated at seventeen millions, has more than quadrupled in fifty years. Its commerce and navigation, which for several years after the revolutionary war, were very inconsiderable, have reached an amount in imports, exports and tonnage, not exceeded by any other nation on earth, Great Britain only excepted. What seas or oceans have not been furrowed by the keels of our daring navigators? What region exists into which the genius of American commerce has not penetrated, whether from Greenland to Cape Horn, or from China to California? Nothing is more common now than to see an American ship strike into the path of the setting sun, and following that burning luminary, as it dips its “glowing axle” in the wave of the Pacific, rise finally on the eastern horizon, after having circumnavigated the globe. What nation can boast a body of men more bold and hardy, more skilful, enterprising and patient under suffering, than the south sea whalers? What country in the world, without exaggeration, has furnished a marine, both naval and commercial, more adventurous, intelligent and patriotic, than that of America?

The rapid advance of our country in the mechanic arts and manufactures, is no less extraordinary. It was the selfish policy of England, when she held us in colonial subjection, to confine our labors to agriculture. Our workshops were on the other side of the Atlantic: in Sheffield, Birmingham and Manchester; and it was the boast of her statesmen, that not a hob-nail should be manufactured in America. Our planters and farmers, of that day, were compelled to despatch their orders to the mother country for the plainest articles of clothing, and even for the common implements of agriculture; and their wives and daughters were decked almost exclusively from foreign looms. But mark the extraordinary results which have been produced by commercial as well as political independence! The inventive ingenuity, and untiring industry of our countrymen, have raised us to a rank which not only threatens formidable rivalry, but absolute supremacy over our ancient mistresses. If it be not invidious to discriminate, we may remember with pride, that Whitney, the inventor of the cotton gin, (worth millions to the cultivators of that article,) and Fulton, who first successfully applied “all-conquering steam” to the uses of navigation, were both citizens of the United States. The products of our looms and spindles, not only supply materially our home consumption, but are wafted on the wings of commerce to the uttermost parts of the earth. We exchange them for the silks and teas of China, the precious metals and costly gems of South America, and the fragrant spices of the Indies. Our natural waterfalls, which in the solitude of past ages, might have been the favorite haunts of the Naiads, have yielded their delightful murmurs to the more useful, but less melodious, hum of countless manufactories:—despite political and sectional hostility, that great branch of national industry has been steadily advancing, and has now reached a degree of perfection, whether we regard the quality or value of its fabrics, which would be utterly astonishing to those who are not familiar with the de-

tails. It would consume far too much of your time, to dwell upon those details; but it is worthy of remark, that Mr. Webster, in a speech recently delivered in the United States Senate, estimates, upon satisfactory data, the annual value of the manufactures of Massachusetts alone, at upwards of one hundred millions of dollars. If this be true, and there is no reason to doubt it, what surprising proof does it exhibit of the creative powers of American industry!

Next in order, may very properly be considered the almost magical effects which a few years have produced in the condition of the country, and in the facilities of intercommunication by means of railways and canals, and the employment of steam power in navigation. Scarcely thirty years have elapsed since the first steam-boat was launched upon our waters, and now, of our numberless rivers, bays and lakes, where is there one, which does not bear upon its bosom these winged messengers of commerce? A few years ago, and a railway was not even known by name to one in ten thousand,—now, it is estimated that there are nearly one hundred, either finished or in a course of completion, besides nearly three thousand miles of canal navigation in the whole Union. States and cities, which were once far asunder, and knew each other only by report; are now brought into constant and easy intercourse. Barriers and obstructions, apparently insurmountable, have been levelled and removed. The ardent, and almost profane, wish of the lover, that time and space might be annihilated, in order that he should be brought to the object of his idolatry, seems not so extravagant as formerly; and the famous carpet of oriental fable, on which, he who stood, might be suddenly transported to distant regions, without any other effort than simple volition, appears not so much the figment of romance, as it did in the days of childhood.

What mighty efforts have been made, particularly in the last quarter of a century, in the cause of American education, science and literature? At the era of independence, there were not more than six or seven universities and colleges in the United States,—now, there are at least fifty. At that time education was almost exclusively confined to the wealthy,—now, it is diffused in a thousand channels by means of academies and primary schools, and sheds its influence alike upon the cottage and the palace. In New England alone, with a population of about one-sixth of the Union, there are no less than ten thousand free schools in active operation.

Next to the pulpit and the school-room, the newspaper and periodical press may be said to exercise an all powerful influence on the feelings and opinions of men. During the revolution, it is ascertained that there were only thirty-seven newspapers published in the United States, whilst, at this time, the lowest estimate would reach two thousand. In periodical literature, our progress has been equally remarkable. A century has not passed since Benjamin Franklin attempted to establish a magazine in the city of Philadelphia; but even under that great man's auspices, it lingered through a feeble six months' existence. Even at the commencement of the present century there was scarcely a publication of the kind deserving the name; whilst now, in the various states of the Union, there are a hundred at least, and many of them liberally sustained, and con-

ducted with great ability. Our own Commonwealth, so long neglectful of ornamental literature, may now boast of a periodical, which has concentrated the rays of some of the finest intellects in the country. Of the multiplication of American books and authors, it would be tedious to speak. Some years since, it was tauntingly asked by the *Edinburg Review*, "Who reads an American book?" That question was propounded, however, in the spirit of petulance, and not in the sincerity of truth. There is not a department in science or literature, in which our young and vigorous republic has not produced her competitors for fame. In *Metaphysics* and *Divinity*, the name of Jonathan Edwards alone is a tower of strength. In *Philosophy*, who has not heard of Franklin and Rittenhouse, and of Godfrey, the inventor of the quadrant, to say nothing of others, both living and dead, who have won distinction? In *Jurisprudence*, the opinions of Chief Justice Marshall, and the legal disquisitions of Story and Kent alone, (if these were all the illustrious names in that department,) would be sufficient to redeem us from reproach. In *History* and *Biography*, a long catalogue of distinguished authors might easily be adduced if necessary. The *Life of Washington*, by Jared Sparks, is one of the most pure and beautiful specimens of biographical writing, ever produced in any age or country; and Prescott's *Ferdinand and Isabella*, will be read with admiration even in the immediate vicinity of the *Edinburg Review*. The various departments of *Natural History*, have been explored with untiring zeal and talent, by native Americans, and Audubon alone, by his great work on *Ornithology*, has placed himself side by side, with the best naturalists in Europe. In the field of *Romantic Fiction*, if it be true, that we have produced no one writer who can dispute the palm with Sir Walter Scott—none who can rival the masterly sketches of character—the loftiness—pathos—and inexhaustible fertility of that Shakespeare of novelists;—we may, nevertheless, boast of names which have won golden opinions even from the British public. The graphic pictures of Cooper and Kennedy—the polished style of Irving—the humor and truth of Paulding, and the simple but pathetic morality of our country women Miss Sedgwick and Mrs. Sigourney, have, each in turn, been applauded by the literary world; nor should the name of Bird by any means be omitted, whose historical novels, descriptive of the conquest and scenery of Mexico, have certainly never been surpassed in this country, nor probably, by the great Scottish magician himself. In *Poetry* too, who can deny but that some of our bards have evinced decided excellence? Which of you have not been occasionally soothed by the pensive muse of Bryant, or thrilled by the splendid lyrics of Halleck, or charmed by the sparkling effusions of Willis? It is true, that America never has, and probably never will produce a Homer, a Shakespeare, or a Milton; but these were mighty men who stand alone in creation, luminaries of genius, around whom lesser orbs are destined forever to revolve.

With respect to the growth of the fine arts, in a soil so long supposed to be uncongenial, let those who are curious to inquire into details, read the lives and labors of American artists, as depicted in the volumes of Dunlap. England owes much of her own reputation, as a patroness of the arts, to the genius and perseverance of

our Benjamin West; and the young British Queen we are recently informed, has not disdained to have her features transferred to the canvass by our countryman Sully.

But it is in eloquence, in its most comprehensive sense,—in the powers of oratory, as displayed in the pulpit, at the bar, and in the senate—that divine art, which carries captive the passions, and enchains the reason of men—that magical spell which enabled Demosthenes

“To wield at will the fierce democracy.”—

that wonderful faculty, by which the immortal Tully persuaded and controlled an empire, or by which Henry dispelled the illusion of British invincibility—it is in eloquence, that America, by her free institutions, has acquired an undisputed pre-eminence. The hired emissaries of England, who, after enjoying our hospitality, have returned home to revile our institutions and ridicule our manners, have some of them had the candor to acknowledge that American orators were almost equal to the same class of men in Westminster Hall and the two Houses of Parliament. They think that our Clay, Webster and Preston, are not altogether contemptible; and this is an important concession, coming from that quarter.

But whatever opinions may be entertained here, or in civilized Europe, of the merits of our orators and statesmen, our poets and philosophers—all will concede, that America has produced one man, whose equal, in every respect, has never been recorded in the annals of time. Of him, it might be said, without poetical exaggeration, that he was

“A combination, and a form indeed,
Where every god did seem to set his seal,
To give the world assurance of a man.”

Of him, it may with truth be said, that human nature, uninspired of Heaven, could not have reached a higher degree of excellence. If his fame was not so brilliant as that of Alexander, Cæsar or Napoleon, he had a title to greatness which they did not possess, in a life so spotless, that even suspicion has never tarnished its purity. How pre-eminent indeed must have been the character of Washington, who, though he had wrested from England the fairest jewel in her crown, extorted from British statesmen the tribute of admiration! In the language of the illustrious Fox, “he derived honor less from the splendor of his situation, than from the dignity of his mind; before him all borrowed greatness sunk into insignificance, and all the potentates of Europe became little and contemptible.”

Such then, gentlemen, is the rather imperfect sketch which I have endeavored to present to you, of the condition of our country up to its present period of existence. Before I attempt to lift the veil of the future, or venture a prediction of what we shall be, even in the lifetime of some of the youngest of my hearers, permit me to point out some of the more striking peculiarities by which we are distinguished from modern civilized nations.

And, 1st. Our institutions differ essentially from those of Europe, in the principle of self-government, or popular sovereignty. The right of the people to build up, modify, or totally destroy the political fabric, is here recognised as a part of the organic law. It is true, that in

all ages and countries, the multitude have occasionally exercised the right of dethroning their rulers, and overturning their governments, but this has generally been attended by violence and bloodshed; whilst here, on the contrary, the people, if they choose, may pull down their government, as a man may demolish his house; and, indeed, with no better reason; for the power is the same, whether it is thought that the foundations are rotten, or the architecture merely distasteful.

2d. In the principle of perfect political equality, by which we mean, not that equality that fanatics and visionaries have imagined to exist, but the equal participation in legal and constitutional rights. In Great Britain, where there is far more political freedom than in the rest of Europe, there are, nevertheless, odious distinctions in rank and privilege, which doom one portion of society to perpetual inferiority.

3d. In perfect religious liberty, and the entire separation of church and state. In some parts of Europe, there exists what is called toleration; but this is in fact not the opposite, but the counterfeit of intolerance. To permit the existence of what are called heterodox creeds, implies a pretended right to enforce uniformity, when required by state policy or caprice. In America, we reject all right of interference whatsoever by the civil magistrate in matters of conscience.

4th. We differ from Europe, including Great Britain, in the almost unlimited freedom secured to the press and to private individuals, in animadverting upon the conduct of our rulers. We hold the doctrine that error of opinion may be tolerated, when reason is left free to combat it. Free as England is, a publication there, intended to bring monarchical government into contempt, would be treated and punished as a libel; whilst in America, we may if we choose, hurl the thunders of the press against republicanism itself, with perfect impunity.

5th. This country is particularly distinguished by the freedom it allows in private pursuits and professions, and by abolishing all distinctions in the transmission of property. Even in Great Britain there are regulations innumerable which shackle the efforts of industry; and their laws of property devolve the estate upon the eldest son, though an idiot, in exclusion of younger brothers and sisters.

I now call your attention to the probable future destiny of this nation, and the dangers which await us. What shall we be at the end of the next half century—a mere span in the life of a nation? Can we penetrate the mysterious veil which hides from us the future? Can we unroll the sibylline leaves, and read the history of unborn generations? There are some things, undoubtedly, which, without the aid of prophecy, may be termed the predictions of reason and experience; and these, if they do not reach, nearly arrive at absolute certainty. From the well known augmenting principle of population, for example, in a country whose capacity to produce the means of subsistence is almost unlimited, we may safely conjecture, that at the end of fifty years from the present time, our boundaries will contain at least seventy millions of people. Reasoning either from the past, or from well established principles of political economy, there is every probability of such a result. It is almost morally certain that our increase in wealth will be commensurate with the march of population. Agriculture will improve, and bring forth her immense

nable products for the sustenance and convenience of man. Commerce will expand its power and resources, and pour into our lap the riches and luxuries of every clime. Manufactures will go on extending and multiplying their powers of production, and adding materially to the national wealth. The various portions of the country will be linked together by railways, and canals, or by some other as yet undiscovered means of connection, in a degree, which may be easily inferred from the hitherto rapid progress of internal improvement. Palaces will rise on the borders of the great northern lakes, and flourishing cities will lift their spires in the now pathless wilds of Iowa and Oregon. Richmond will be larger than Baltimore now is; Baltimore will swell to the dimensions of Philadelphia, and Philadelphia and New York will surpass London and Paris in wealth and population. These are not idle reveries, but sober substantial calculations. We shall also, undoubtedly, increase in knowledge; for whilst I do not belong to that Utopian school, which believes that there are no limits to human improvement, it is clear that the vast regions of science are not yet fully explored. The inventive ingenuity of our countrymen—especially in applying the principles of philosophy to the useful and mechanic arts—will as much surprise succeeding ages, as we have been surprised at its past rapid development. It is also beyond all question, that if effects which flow from their natural causes are not counteracted by some strong antagonist principle, the increase of power and riches will be followed by an increase of luxury, and its train of attendant evils.

"Increase of power begets increase of wealth;
Wealth, luxury, and luxury excess;
Excess—the acrofulous and itchy plague,
That seizes first the opulent—descends
To the next rank contagious, and in time
Taints downward all the graduated scale
Of order—from the chariot to the plough."

It is a lamentable truth, that in the constitution of man, the blessings by which he is surrounded are capable, if misused, of being turned into the bitterest curses. In the natural world, we perceive that the elements which sustain life and enjoyment, may become the active agents of destruction. The sun itself, the fountain of light and heat—the very atmosphere we breathe—the gentle breezes of summer—may become the sources of pestilence. So in the moral world—the choicest gifts of Heaven, if ignorantly or wickedly perverted, are frequently changed from healthful aliment into consuming poison. What, for example, can be a more precious boon to man than liberty;

"'Tis liberty
Which gives the flower of life its lustre and perfume,
And we are weeds without it."

And yet how thin is that partition-wall which divides rational freedom from licentiousness and anarchy, and how quick is the transition from anarchy to despotism! Look at that "chartered libertine," the press, whose exemption from all restraint is considered as at the foundation of Republican Government. With all its purifying and enlightening tendencies, how often does it cast a malignant and disastrous influence upon society? If, when conducted by honorable and virtuous men, it maintains the cause of truth, and fearlessly ar-

raigns the powerful transgressor; we find it also, when in evil hands, the frightful engine of falsehood and corruption—scattering abroad its envenomed shafts, and shedding its blighting mildew on the fairest reputations. Even learning—another name for wisdom—philosophy—science—even that has been sometimes perverted to the worst of purposes. Assuming the specious guidance of untrammelled reason, it has frequently dethroned reason itself, and inculcated principles totally subversive of human society and morals. So far from being, as it should be, the "vital fluid of organized liberty," it has sometimes become its deadliest bane, by enlisting in the unholy cause of infidelity. It has not only been employed as the instrument for severing the social bond, but of weakening that adamantine chain which binds the soul of man to its Creator.

I know it is thought by some, that there are certain unmixed benefits which are neither attended nor followed by evil. The easy, extended, and general intercourse, for example, which in progress of time, will prevail, between wide-spread portions of the Union, by means of internal improvement, has been considered as promising unadulterated good. I cannot entirely concur in this opinion. Great and obvious advantages will doubtless be the result. Asperities and prejudices which now exist in different sections of the Union, will be softened down and subdued. The comforts, necessities, and luxuries of life will be more generally diffused, and the stock of useful and practical knowledge will be greatly increased. On the other hand, there are evils to be anticipated from the perpetual locomotion and friction of society, which will probably counter-balance all the advantages. It will engender a restlessness of spirit—a constant desire of change—habits of expense disproportionate to means—an aversion to labor—and especially agricultural labor, which repays so tardily. It will introduce strange fashions and new vices into regions which are now untainted, by reason of their seclusion. It will, perhaps, rob domestic life—

"The only bliss
Of paradise that has survived the fall!"—

of much of its quiet, security and repose.

From what has been said, you will probably infer, that I consider the continued existence of our Republic as uncertain. I do. I cannot subscribe to the oft-repeated dogma, that it is treason to despair of our free institutions; on the contrary, I think it is folly to expect that they will escape the common destiny of created things. It is far better indeed for their immediate security and preservation, to consider (paradoxical as it may seem) that they must ultimately perish. Individual man, is conscious of his own mortality, and why therefore should he think that the mere work of his hands is immortal? The knowledge that the term of natural life is limited, obliges us to adopt all the means and precautions which usually conduce to longevity. So ought it to be with the political body. A conviction that the Republic will sooner or later perish, will, if any thing will, stimulate us to the use of all those powerful means and checks which are likely to prolong its existence. The merest tyro in history and politics, knows that a people can only continue free, so long as they continue virtuous; and the experience of mankind fully demonstrates, that nations, as well as individuals, have sometimes passed from a state of

comparative innocence, to the opposite extreme, with a degree of rapidity, which has baffled all human calculation.

That a Republic, based upon the union of law and liberty, is the best government for man, seems an undeniable truism. But it does not follow that because it is most conducive to our real interests and happiness, it is therefore the most permanent. There is no doubt that the universal prevalence of the christian religion, would convert the earth into a perfect Eden. Order, peace, justice, charity, and the long train of moral virtues, would prevail over fraud, injustice, outrage, and the equally long and hideous catalogue of human vices. Even government itself might be abolished as useless and cumbrous, if men were inclined to yield voluntary obedience to the precepts of christian morality. But who is credulous enough to believe, that on this side of the promised millennium, such beautiful visions will ever be realized. Who does not know that so long as man exists in his present state, his passions and follies will too often prevail over the dictates of reason and justice. It is, in truth, a gross, though common error, to suppose that Republican government is, of all others, the most simple and natural in its structure. On the contrary, I consider it the most wonderful and complicated of all human contrivances. A watch is apparently a very simple machine, and yet if examined, we shall find that its parts are exquisitely adapted, and fitted together by the highest mechanical skill. Happy would it be for us, if the mechanism of our free institutions, when violently thrown out of order, could be as easily repaired as our watches; but there are no mechanical principles which can be applied to the regulation of human conduct. Man, as a moral being, is not subject to the same laws which govern inanimate matter. There is no philosophy which can provide for the ever-shifting circumstances in which he is placed, or which can scrutinize the subtle phenomena of his motives, propensities and passions.

Is there no rational scheme then, by which the existence of our great Republic, the world's last hope, can be prolonged? No practicable plan by which the dangers that await us, if not entirely overcome, may at least be postponed? I answer, that much may be done by powerful, united and persevering effort; and this brings me to the last subdivision of my subject, already I fear, spun out too much for the patience of my hearers. Whilst I solemnly believe that Divine Providence is as active, if not as visible, in the affairs of nations, now, as in the days of the Jewish theocracy, when the children of Israel were led through the desert by the pillar of cloud and fire; yet, I also believe, that human agency in every generation, is employed by that same Providence to mould and impress the character, institutions and morals of those who come after them. It is, in truth, an unwavering trust in the Supreme Being, and a profound conviction of moral accountability, which constitute the strongest cement of free institutions. It was, undoubtedly, the prevalence of the Atheistical doctrines of Epicurus, which led to the rapid subversion of the Roman empire; and the reign of terror and bloodshed, in revolutionary France, was not consummated, until infidel Jacobinism had demolished the altars of religion, and proclaimed that the grave was the place of eternal rest. Free, voluntary, and

general support, therefore, of religious institutions, is absolutely essential to public and private virtue; and, without these, Republican government cannot possibly exist. In the language of Cowper, whom I have already quoted—

"The pulpit (in the sober use
Of its legitimate, peculiar powers,)
Must stand acknowledged, while the world shall stand,
The most important and effectual guard,
Support, and ornament of virtue's cause."

Next to the maintenance of religious institutions, the adoption of wise systems of education, and popular instruction, will be greatly beneficial; and there is no part of education, which, traced to its ultimate consequences, is of higher utility than the early and careful culture of the female mind. It is one of the happiest characteristics of the present age, that woman is allowed to assert her just claims to intellectual improvement. Man, indeed, has found it to his own true advantage, to emancipate her from that inferior condition to which his pride and tyranny once doomed her; for when she has passed through the blooming period of girlhood, and assumes the important and responsible character of a matron, it is then that she becomes herself an instructress, and exercises a powerful influence on the rising generation. It is the voice of a mother which first electrifies the infant heart; and if that voice is attuned as it should be, to the accents of truth and virtue, its impressions are almost indelible. On the other hand, unless she who ministers at the domestic altar be qualified for the sacred charge, it is impossible to estimate the mischief which may follow. The tender plant of the nursery requires incessant watchfulness and care; for, in the language of the immortal bard of Avon,

"'Tis in the morn and liquid dew of youth,
Contagious blastments are most imminent."

The general diffusion of sound popular instruction is indispensable to our existence as a free nation; and it is far more important than appears at first view, that correct opinions of human nature should be inculcated as the foundation of all useful knowledge. Man is neither the perfect nor perfectable being, which poets and political rhapsodists sometimes represent him; on the contrary, though possessed of many noble qualities, he has some which continually tend to his debasement. If he knows much, he is ignorant of more; his strength is blended with weakness, and good and evil flow from the same fountain of his heart. If the mass of society were wiser and better, the demagogue would not venture to flatter their vices, or inflame their passions. Extravagant adulation is as false and ridiculous, when applied to the crowd, as to monarchs on their thrones.

Wise legislation may also accomplish a great amount of good. There is no maxim more common or more pernicious, than that a legislator should be a mere passive agent, to be moved only by popular impulse or caprice. On the contrary, he should study the peculiar genius and character of those who clothe him with authority. He should endeavor to promote every good tendency, and counteract every propensity to evil. If he be wise and virtuous, he will enlighten and improve society by the spirit and elevation of his views, and will be just as likely to impart as to receive instruction. If he perceives among his countrymen a keen, grasp-

ing and sordid appetite for wealth—a growing desire for luxury and ostentation—an inordinate craving for sensual, in preference to moral or mental enjoyment—an habitual disregard of social and religious duty—a tendency to faction and to violent extremes, whether of relentless hatred or idolatrous admiration of public men; if he sees any or all these things, he will endeavor to counteract them by every just and reasonable means, not incompatible with rational freedom.

But with all the labors of the Divine, the Moralist, and the Legislator, if the people of this country wish to preserve their freedom, they must take care how they elevate to office ignorant and vicious men. If such a practice should unhappily prevail, there will be no more certain prelude to political corruption and death. If profligacy and crime be rewarded by popular favor, virtue must either sink appalled into retirement, or listen herself to the seducing whispers of interest and ambition. If ignorance shall usurp the seats of wisdom, the schoolmaster's lessons will be needless, and the halls of learning will become desolate.

Indeed almost every man and woman in the Republic, in a greater or less degree, has some share in the responsibility of preserving it; and there is no rank or condition in society which has not its peculiar duties to perform in order to promote that object. The rich and educated classes especially, are bound by every obligation, to aid in the elevation of those who are less fortunate. Society must be improved and equalized, not by the agrarian process of reducing to the lowest, but by raising to the highest level. States, as well as individuals, must practise justice, cultivate harmony, encourage knowledge and virtue, suppress vice, and recommend simplicity and economy by example.

That our political annals should, occasionally, exhibit instances of gross departure from these sacred principles is deeply to be lamented; and among them all there is not one which will fix a more lasting stigma upon the American name, than the course pursued by our government towards the Cherokee nation. The conspiracy of kings, which led to the partition and ruin of Poland, was scarcely a more execrable outrage upon human right, than the mis-called treaty of New Echota, which was ratified by an American Senate, and by which, an unoffending and peaceful people, were sacrificed to the rapacity of a band of speculators.

It is hardly less to be wondered at, that that same illustrious body, (the United States Senate,) should still more recently have refused the grant of an acre of ground, for the erection of a monument to the father of his country. The lofty pyramid, it was thought, would obstruct the prospect from the capitol,—as if an American Congress could have constantly before them, an object more likely to purify and inspire their deliberations. Notwithstanding this slight to the memory of one who was "first in war, first in peace, and first in the hearts of his countrymen," I would earnestly recommend to all who hear me, to study diligently the life and writings of that incomparable man. A visit to the falls of Niagara may awaken sublime emotions, but a pilgrimage to the shades of Mount Vernon will rekindle the embers of patriotism when almost extinct.

Finally, gentlemen of the Lyceum, if my humble voice can encourage you in your useful labors, I beg you to persevere. Your Society is a part of the great plan

for perpetuating our free institutions; and it is honorable to you to have set an excellent example to the youth of this city. We Virginians, though somewhat social in our habits, and fond of conversation, are not remarkable for associations exclusively literary. Clubs, we have innumerable; some to promote the pleasures of the table; some for acquiring, the dexterous art of throwing the discus; and others, for improving the breed of that noble animal, the horse. Our own improvement we generally leave either to solitary effort or the chances of fortune. Notwithstanding such discouraging examples, you have laid the foundation of a Society, which I trust will fully reward you by its benefits. In process of time, you will communicate a portion of your own ardor, to those who are now cold and indifferent; and it is not among the least gratifying subjects of remark, that your proceedings have already inspired an interest in the minds of the gentler sex. Go on then in the path in which you have been treading. Your example will kindle an honorable emulation in others, and we may hope that the day is not far distant, when our beautiful metropolis will abound in institutions, having for their object the intellectual advancement, true glory, and real happiness of our people.

MUSIC.

Mysterious Music! o'er the realms of feeling

'Tis thine to reign supreme: thy witching voice
On the charmed ear, melodiously stealing,
Can melt to tears, or bid the heart rejoice.

Some strains there are—may they be mute forever!

I would not hear them—it would seem profane;
They bring to mind the loved, the lost, who never
Shall in this world breathe sounds of song again.

With their soft notes, awakened mem'ries gleaming

With hues too strangely blended—sad, yet sweet—
Before me rise, of eyes once bright and beaming;
Eyes that on earth mine never more shall meet.

Tones of sweet voices hushed; the kindly greeting

Of hands once clasped in mine; soft cheeks of bloom;
Hours full of bliss, pure, exquisite and fleeting,
Now with the silent past, and in the tomb.

Thou hast, oh Music! ains the deep, the thrilling,

Meet for the spirit-stirring trumpet and drum;
With pride and hope each soldier's bosom filling;
That bid him to the combat fearless come.

And the slow dirge above that slain one, seeming

Fit requiem for the brave; though mournful, grand;
That breathes of noble deeds, of banners streaming
O'er those who died for their loved native land.

When the dark, crimson tide of war is pouring,

His country's battle-cry is in his ear,
With clash of swords and thundering cannon's roaring,
And death or conquest only can be dear;

The warrior feels the shrill-toned bugle swelling—

Its martial numbers, fires his gallant heart;
Before his vision floats his own loved dwelling—
His arm is steel—that strain hath done its part.

'Tis thine the bliss of youthful hearts to heighten,
 With lyre attuned to mirth's inspiring lay;
 The radiant eyes of beauty thou canst brighten—
 Make the dull cheerful, and delight the gay.

And thou canst o'er the soul, shed gleams of glory,
 In sacred sounds that bear the spirits high
 Beyond the earth; and to the gray, the hoary,
 Bring promise of a youth that shall not die.

Thy spells bring back sweet thoughts, young hopes, yet
 sadness

Blends with my joy, and most of all I love
 Those holy anthems, that in solemn gladness
 Arise in praises to the throne above.

Sill, Music, be it thine to wake devotion,
 To stir each virtuous feeling of the soul—
 All generous thoughts and every pure emotion,
 Be subject, power divine, to thy control!

POTOMAC RIVER.

"Dear native stream! like peace, so placidly
 Smoothing through fertile fields thy current meek!

Scenes of my youth! the aching eye ye leave,
 Like you bright hues that paint the clouds of eve."
Coleridge.

Let us essay to discourse somewhat of the noble river which laves our shores, albeit we know it will be a feeble effort. Indeed, we never pass up and down the Potomac, (which is, happily, often our wont,) without being strongly urged by our feelings to "utter its praises." With its limpid sources in the highlands—its turmoil with the rocks—and its victory over the mountains, we are not *familiar*, though it has been our fortune to stand on Jefferson's Rock at Harper's Ferry, and spend hours at the Great Falls—both possessing, in their scenery, as much of the grandeur of nature, as, perhaps, any other two places on the continent—Niagara hardly excepted. But, when old Potomac leaves the hills, and ceasing to be obstructed by the obstacles which impede his course and lash him into foam, quietly expands into a broad and tranquil stream affected only by the winds and tides, almost until he, as quietly, falls into the ocean's bosom, *he is our own!*

If any one fond of nature's beauties—quiet beauties—wishes to indulge his taste, let him on some pleasant day in summer, when there is breeze enough to fan the waters and fill the sails of the vessels, ensconce himself on board one of the fine steamboats that continually plough the waves of this river, and there, taking his seat under the awning of the promenade deck, as he glides past the shores, "drink in with his eyes," all that he sees around, below, and above him, until his soul overflows with thankfulness to the Giver of so much that is calculated to soften, refine, and delight him!

There is no very bold and rugged scenery on the river, from the Anacostia down to its mouth,—but the general regular slope of the shores, both on the Maryland and Virginia sides, is agreeably diversified, at intervals, with lofty cliffs and promontories, wooded to

the water's edge, and casting their deep shadows far out, so that you often sail along for a mile, with the umbrageous green of the trees keeping the sun's rays, from your head, while just beyond they glance and sparkle in the waves. The Bluff above Fort Washington—the woody heights of Mount Vernon—the high banks at Liberty—the cliffs at Stratford, and many other points, present commanding views. Between these and similar ranges of hills lie extended for miles and miles, the fields gently sloping, as we have just said, to the water's edge, crowned during the summer season, with the "abundant harvest"—plantations of wheat, corn, and tobacco—looking rich and full, and betokening a land where nature has been kind and bounteous—and man not inactive—but where much yet remains to be done.

No river in the country possesses finer or more commanding sites for country seats on its banks, than the Potomac. These have often, with much good taste, been occupied, and adorned with mansions, where hospitality is dispensed with a liberal and generous hand. The tall and elegant Lombardy Poplar will often mark these sites, where the houses themselves are screened from view by the other trees with which they are surrounded. It is a luxury, indeed, to sit in the porticoes of these mansions—how often have we enjoyed it!—with the 'sun wheeling on its broad disk behind the Virginia hills'—and the fresh breeze blowing right from the ocean—to look up and down, the river rolling at your feet, as far as the eye can reach—your view limited only on the one side by the mountains which you can faintly distinguish like stationary clouds in the horizon, and on the other, never ending till the clouds and water seem to unite and mingle together, and the vision can pierce no farther!

The Potomac is a tortuous river, and its channel is more sinuous and winding than its course. Sometimes you strike out into a broad bay, where navies might ride with ease, the shores looking dim and hazy in the distance; then you approach a point, and doubling its shoal you run into deep water within a few yards of the beach, along which you sail, until again you shoot across the stream and reach the opposite shore. The skilful pilot 'threads his way,' boldly—for he, generally, has 'ample space and verge enough.' The 'Reaches' of the river, too, as they are called, are among its greatest beauties—such as Washington's Reach—Nanjemoy Reach, &c. Afar off the land appears to 'loek' on either side, and you would think the river abruptly terminated at the foot of a range of hills. Approaching nearer you find it gracefully curving a projecting bank, rounding which, another expanse of water opens to your view, and appears again to end in a similar manner. It is thus that the view is continually varying—'still beginning, never ending'—diversified with all that can please the eye or gratify our sense of natural beauty.

The river is not a solitary highway, where only occasionally the cars of commerce move in their trackless path. There are no prettier vessels any where, than the craft that dot the surface of the Potomac, and are seen skimming along, with their white sails spread to the wind, wherever the eye wanders. Cheerily the sound of the craftsman's song is heard across the water, and often he beguiles his silent watches with the music

of the violin, which, though rude, sounds not unpleasantly to the ear as it comes mellowed by distance.—These little vessels you meet constantly—you see them stealing out from the creeks that run far inland, and hovering about the shores as if afraid to venture out—and then you may follow them pushing boldly into the middle of the stream, spreading their canvass to catch the breeze, and often careening under its power, until they turn their very keels to view. Moving majestically in a fleet of these, you will meet the stately ship, heavily laden, returning to port, or departing on her voyage—a “Triton among the minnows”—or oftener still, the sea vessels of a smaller size, but yet far larger than the craft, wending their way through this great thoroughfare formed by nature.

Of the hundreds of beautiful creeks—many of them larger than the streams that are dignified with the name of rivers in Europe—that empty themselves into the Potomac, and add to its grandeur—though we have explored not a few—we design not to speak. Let our experience in “crabbing and fishing,” in the sheltered nooks they form, be “unwritten.” But Cameron, Pohick, Aquia, Ocoquan, *Chotank!* we know you all—we love you all—the last not least—nor, though not on our native shores, are we altogether ignorant of Mattawoman, Piscataway, Nanjemoy, and their fellow tributaries, from Maryland to the great Potomac.

When we write about this river, we “speak that we do know.” We have seen Potomac in all his moods and tempers—furious and boisterous—placid and gentle—clear and still—turgid and rapid—and in all there is grandeur and beauty. We have stood where the wide river stretches out into a miniature sea—five or six miles across from shore to shore—and listened to the waves as they gently rolled in and broke upon the beach, with a low and soft murmur, that seemed to lull them to rest—and, again, upon the same spot, we have heard the loud roar of the waters, as they rushed, white capped, upon the banks, shooting far up their surf and spray, and retiring with a like mad impetuosity, as if angry at being balked in their purpose of encroaching upon the land.

And O! the glorious sunsets that we have seen whilst passing up the river! Once we remember, just as we reached Mount Vernon, hallowed spot! a flood of glory was thrown over the scene which made it enchanting. The day expired in splendor. Wood and water were dyed a thousand hues, and the venerable mansion of the father of his country, stood out, as it were, from the heights, in the strong yet chastened light, with a distinctness unusual. Every eye was turned to it. A deep silence reigned; but we all stood uncovered, and even the sailors, catching the inspiration of the moment, leaned over the side of the vessel, and gazed in admiration at the scene. Slowly and gradually as we receded from the shores, the brilliant colors of the setting sun were lost in the approaching shades of night, and Mount Vernon became indistinct in the distance.

But enough of POTOMAC, for this once. Hereafter we may, if this is not too much of our “bald, disjointed chat,” fill another page, on the same theme.

Alexandria, D. C., Sept., 1839.

LUCILE:

A NOVELETTE.

By the Authoress of “The Curse.”

CHAPTER VII.

Guide.—Ah, my life,
Flowers are all the jewels I can give thee;
I have no castle in whose stately halls
Vassals or kinsmen wait to welcome thee.
Lucile.—Oh! love asks nothing but the heart.

L. E. L.

LETTER FROM GREY TO LUCILE.

“Many, many weary weeks have elapsed, dear Lucile, since we last met. In vain have I haunted thy abode. I have watched for thee with a fevered heart, and when by accident I obtained a glimpse of thee, Victor was beside thee. I have seen, my beloved, that thy cheek is pale, and the tears were glittering in thy dark eyes, even when he was wooing thee to forsake thy chosen one and share the brilliant destiny which he offers to thy acceptance. Ah, Lucile! my heart is sorrowful for thy sufferings, but still it thrills with joy to think that the eye dimmed with tears cannot be dazzled by the splendor of the future, to which he calls thy onward gaze. He may bid thee send forth thy spirit over the dark waters of life, but like the dove of old it will find no land of promise whereon to fold the weary wing, and it will bring back no symbol of peace to thy sorrowful soul. And do I not love thee more deeply, more dearly for thy unswerving faith? Are not our souls knit together by a deeper, holier tie, than those whose Heaven is all sunshine? whose hearts ne’er knew what a hallowed thing unwavering love may become? My soul is filled with thee—Thy glorious beauty, and thy gentle nature have woven a spell around me, that is on my whole being. There is not an hour that thou art not ever with me in my thoughts. I have been painting a likeness of the mother and infant Jesus, and in the heavenly brow of that madona I recognize a resemblance to thee, my heart’s ideal; and again in the smiling mouth of the sleeping cherub thy expression breaks on me. I sit for hours before it, my hand hanging listless by my side, gazing on that smile, and dreaming of thee. How is this to end? To lose thee will be to lose the beacon light that guides me on to fame—to tear the mantle of genius from my soul, and trample it in the dust and mire. To win thee from thy home, to follow my weary pilgrimage, is to ask of thee to sacrifice the elegancies, almost the necessities of life, to brighten my otherwise desolate lot. And thy obdurate father: though he has no sympathy for me, or even for thee, his own, his only child, I cannot think of *his* desolation, deprived of thee, without shuddering at the thought of his lonely age—his solitary dwelling; yet the choice will be his to receive his lost treasure back again with pardon, or yield her to the protection of as true and loving a heart as ever was offered at the shrine of woman.

“I can no longer endure this life, Lucile. It unfit me for every thing, and I know that thou art not less unhappy than myself. End this suspense—decide thy fate and mine. In a few days I sail for America—the

home of my forefathers: I have an uncle there—a poor but a good man—he has written for me to come to him, and the little property that he possesses shall eventually become mine.

'A ship is floating in the harbor now,
A wind is howling o'er the mountain's brow
* * * * *
The halcyons brood around the foamless isles;
The treacherous ocean has forsworn its wiles;
The merry mariners are bold and free,
Say, my heart's *idol*, wilt thou sail with me?'

"Answer me, adored Lucile: weigh all thy present advantages against the vigilant affection which will suffer no sorrow, that love may avert, to fall on thy gentle heart; which will view thee as the shrined divinity of my home—an angel presiding over my household gods—and then choose thy destiny. I have health, energy, and hope; why then shall I not be enabled to win for thee a home in that far land to which I hasten, which if less splendid than thy native one, will be thrice blessed by the undying love which will brighten our lowly lot. Meet me to-morrow evening. I shall be in the pavilion when the moon is rising. Come to me with thy heart full of love, and thy soul nerved to endure the separation from thy early home—the severing of thy early ties for one which shall replace them all. Forgive my seeming presumption—I doubt thee not, because my heart has taught me the faith of thine. Adieu. S. G."

"And how have I deserved this trust?" murmured the unhappy girl, clasping her hands over her pallid brow. "I, who even now am expecting each moment the entrance of him to whom a few more days will give a husband's claim to my love. I have been weak; wavering where I should have been most firm. I will make one more appeal, and if 'tis fruitless, I can but lie down and die; for let me turn whither I will, there is no hope for me. On one hand the curse of a father hangs suspended over my head; and on the other, the madness of suffering Sidney to believe me false as weak."

She arose and paced the room wildly. In a few moments Victor entered. He looked at her an instant in surprise. "Well, my fair cousin, I am happy to see that you are at last wearied with your listless demeanor, and have concluded not to look as if hope was forever banished from your heart. Why, what has thus excited you, my beautiful?" he inquired, playfully touching her cheek, on which a spot of deep crimson glowed. She drew back haughtily—then suddenly throwing herself before him she exclaimed:

"Victor, behold me a suppliant at your feet: If you would not see me die here—if you have one spark of generosity or human feeling in your heart, be not callous to my appeal. Read this letter—it reached me by accident, for the wily priest dropped it, without intending it, when he came to me with a message from my father. I am your plighted bride; but you well know that I was terrified into becoming so, by the violence of my father. Oh, Victor! save me from becoming a loveless wife, or an accursed child."

Victor appeared affected, as he raised her from the floor, and placed her on a seat. "Dear Lucile, why make such an appeal to me? You know full well that I have no power to turn your father from his purpose."

"Do not make so pitiful an evasion," said Lucile,

scornfully. "There is at least one way of releasing me from this detestable bondage: by withdrawing yourself from this place, you can free me from the marriage, and your own presence at the same time."

"You are flattering, my pretty coz; but is truth you ask too much, when you expect me to withdraw myself from your presence or to offend my uncle by declining an alliance on which his heart is set; but, truth to tell, not half so much as my own. Grey cannot love you better than I, and the balance will be much in your favor by remaining under your father's roof. Excuse me, Lucile, but your pale cheek, and chilling reserve, since I have been taught to look on you as my affianced bride, have wearied me; and if I appear harsh or unfeeling, it is because I use the language of plain common sense; yet there is not the less of deep and true affection in my heart for you. I have too high a regard for your happiness, to permit you to wed Grey. If I do not marry you myself, your father will be offended, and cast me off. You will eventually elope with this painter, and leave me to wear the willow."

"You speak lightly, sir—as if happiness were a jest, and affection transferable at will."

"If I do speak lightly, Lucile," said he earnestly, "God knows I feel deeply. Do you suppose that your evident shrinking has not cut me to the heart? or that I have watched your struggles of feeling without bitterness? No—I should have been more or less than man could I have done so. Address your appeal to your father—if his consent can be won, I will resign you at once to my more fortunate rival, though in so doing I destroy my own hopes of happiness. At this moment I more deeply envy Sidney Grey, in his poverty and friendlessness, than I ever dreamed I should envy any man. Take back your letter, Lucile—I do not wish to read it—my course is decided. Yet I pray you do not think me intentionally unkind." He threw the letter on her lap, and hastily left the room.

"Oh, Heaven! what will become of me?" she exclaimed. "Is there no avenue of escape for me? Cruel! cruel Victor! to exact the fulfilment of the bond! Oh, God! be thou my friend, for hope has deserted me."

"Lady, you have a friend, if you have the courage to embrace his proposal," said a low voice at her side. She turned and beheld the priest.

"What is it?" inquired she, scarcely conscious of what she was uttering.

"To fly from tyranny, and reward the noble heart which would shed the last drop of blood that gives life to it for your sake. The letter was not dropped by accident. I promised that it should reach you, and you have it. Can you hesitate when you love him, and he woos you to become his bride? Another week will leave you no power to choose between the evil of hopeless love, or a heartless marriage."

"And my father?"

"Leave him to his own devices," returned the priest, with a scornful laugh. "If you are the light of his life—the joy of his eyes—he will recall you; if not, why let him live on in the solitude to which his stubborn pride will doom him, while you bring joy to the heart that is devoted to you. Say but the word, lady, and before your bridal day all things shall be in readiness for your flight. Read that letter once more, and then make your decision."

"It needs it not—my decision is already made," said Lucile, with a calmness that surprised herself. "Any destiny, however dark, were preferable to a separation from him. Repeat my words to him, and say that to-morrow evening will find me at the pavilion, without fail, ready to forsake all and follow him in exile or death."

The priest bowed low and left her. "The die is cast," she murmured. "A few more hours and my poor old father will be desolate. Yet he has driven me to it. Had he continued the same to me that he once was, I could never have abandoned him—not even for Sidney, truly as I love him."

Her once indulgent parent had indeed changed. Latterly she almost feared to go into his presence: he received her with frowns, and his lips seldom unclosed but to utter some sarcasm against her faded looks, or express bitter contempt for her absent lover. The kindlier feelings of his nature appeared to be embittered against all around him, and her consent to wed her cousin had been wrung from her in a moment of frantic passion, when the curse of an offended parent was trembling on his lip. The consent had no sooner been given, than her father insisted on the marriage taking place, so soon as preparations could be made to celebrate it on the magnificent scale he desired. Already was the mansion crowded with their "troops of friends," who had gathered around them for the joyful occasion, and many were the comments made on the depression and languor of the fair bride. The younger portion of the guests looked on the superb *trousseau* of their companion, and marvelled that the possessor of so much splendor, and the betrothed of the handsome Victor, should wear so joyless an expression. They little dreamed that a thrill of silent agony shot through that wearied heart, at every fresh proof of her father's ostentation, in thus decking the victim of his pride, while he refused to her even a few short weeks in which to reconcile herself to the new destiny that awaited her.

Victor would willingly have delayed the marriage until his cousin became less repugnant to it; but the imperious father had so long reigned over his household with despotic sway, that any hint of a proposal of the kind elicited such a storm of passion, that, fearing to offend him, and thus forfeit not only his cousin, but all hope of future assistance from him, he became the passive instrument of the irascible old man.

Victor was the only child of a younger brother, who had dissipated his slender patrimony long before his death, and from infancy he had been dependent on his uncle. General Montessor had spared no expense in giving him a fitting education; and while the two children were yet in their cradles, their future destiny had been decided in his own mind. His own observations had taught him that those who are reared together seldom become attached with other than the love of kindred, and to guard against this he had suffered his nephew to be educated in his native land, while his daughter grew in loveliness beneath his own roof. On the death of both his parents, within a few hours of each other, Sidney Grey had been adopted into his family, and it never occurred to the old soldier that the two bright creatures who played around him in infancy, should ever dream of being more to each other than brother and sister.

All the pride of his haughty nature centered in his daughter. She was the Peri of his house—the inheritor of her mother's matchless beauty; the heiress of his vast wealth, his unsullied name. He might have said in the tender and exquisite words of the poet:

"Her's was the voice that soothed my home;
She was my world, my life, my light;
The care, the charm that blessed my eyes,
That filled the day, and filled the night.

* * * * *
Her image mirrored back my heart;
My life's best days were on her brow,
One constant light of happiness."

Yet with all this love for his child, he saw her fading before his eyes, without entertaining a thought of sacrificing the cherished aim of his life. Conscious that he was inflicting misery where he desired to bestow happiness, he became morose and embittered toward every one. He had not sufficient self-command to repress his harshness, yet when he saw the tears his daughter vainly endeavored to conceal, he would have relented, had not his unbending nature impelled him to persevere in what he had once undertaken.

"Men have died, and worms have ate them, but not for love," muttered he; "aye, and women too—their hearts are made of sterner stuff than to break for a trifle. She will fret a little now, but soon the rose will come to her cheek, and those soft eyes will look with renewed joy on this beautiful world. She shall never miss the love I have denied her: my care shall be so unwearied, and Victor will be so devoted. Ah, no! she cannot long grieve for what is unattainable." And thus he silenced the "still small voice" that was whispering to him of a broken heart, and an early grave.

CHAPTER VIII.

My noble father,
I do perceive here a divided duty:

* * * * *
But here's my husband;
And so much duty as my mother showed
To you, preferring you before her father,
So much I challenge that I may profess
Due to the Moor, my lord.

Othello.

The bridal evening came. It was as glorious a night as ever a bright moon shone on. The mansion flashed with a thousand lights, and the mingled sounds of music, and words of welcome, were borne forth on the still air of night, as group after group arrived at the door, and received the hearty greeting of their host.

Lucile was in her dressing-room, surrounded by a bevy of dark-eyed *houris*, who were to act as bride-maids to her.

"Well, Lucile," said one, "I believe your own taste is purest after all. Those simple orange flowers wreathed in your raven hair, are more beautiful than jewels; and that robe of embroidered muslin is certainly more elegant than this of lace and satin; but then you are so beautiful that you need not the 'foreign aid of ornament.' What will your father say to your simple toilette, when his wish was to see you not only the fairest, but the most sumptuously attired bride, that our island could produce."

"He will not have much thought to bestow on my

dress, and a few hours hence, I fear, it will matter little to him what I may wear or how appear. A few more brief moments and my destiny will be decided," she murmured in a low tone. "Oh, God! in mercy soften my father's heart in my favor."

Half an hour later a gay burst of music swept through the wide halls: the folding doors were thrown open to admit the bridal party, and to the surprise of every one the bridegroom alone appeared, with a face of the hue of death, and hastily advancing to General Montessor whispered something in his ear. He sank on a seat overpowered by his emotions; but instantly starting up, left the room and proceeded with hasty strides to the chamber of his daughter. At the door he met the terrified Agnes.

"Speak—tell me the truth, on peril of your life," said he, catching the girl by the arm. "Where is my daughter? your young mistress? Guide me to her this instant."

"Dead, sir—master—I doesn't know. She sent me out and axed the ladies to leave her alone a few moments 'until Mas' Victor came;" said the trembling negro. "Dead, I doesn't know where she went to."

"Liar," said the excited father; bending his white lips to the ear of the girl, he continued, "I know you are in her confidence—tell me where I can find her, and freedom is your's—aye, freedom—think of it—think of it. Refuse, and by the Eternal I will kill you where you stand."

The eyes of Agnes rolled in wild terror, and for an instant she seemed undecided, but her master tightened his grasp on her arm, and said in a low hissing tone, "Decide—freedom, or—you know the alternative."

She pointed to the garden. Dashing her from him, with hasty steps, he threaded his way through the tortuous pathway leading to the pavilion, preceded by Victor, who had no sooner heard the words of the girl than he rushed forward with the speed of a maniac.

"Thank Heaven, I am armed," muttered he; "and 'twill be hard, but I wrest her from him. To lose her now—to be the scoff of wittlings and fools, were worse than death. Mine she must be at any expense." And grinding his teeth with rage, he sped on with renewed activity.

The pavilion was not yet vacated by those who should have been far away. The moonlight was streaming through the windows on two figures, and a third one stood without. A white-robed girl supported by the wreathing clasp of her lover, as if about to move forward, and a stout heavy built man, who stood as sentinel at the door, appeared accoutred for the road. Tapping on the steps with his whip, he said—

"You had best hurry, señor—the carriage is waiting at the end of the avenue."

"Let us be going, dearest," said Sidney. "Your absence must soon be discovered."

"Ab, let me take one more look at my forsaken home. Before I leave it, perhaps forever, suffer me to waft back one more blessing to my old father—abandoned in his latter days by his only child. Ah, Sidney, were not my love as strong as death, as deeply seated as the foundations of my very being, I could not leave him thus."

"Put your trust in me, Lucile," murmured Sidney, in tones of such thrilling tenderness, that she felt at that

moment it were easier far to yield a world than the love of that noble heart.

"I do, fondly, faithfully, implicitly." She turned her farewell glance on the home she had left, gleaming through the trees like a fairy palace. A strain of music came on the wind. "Hark! 'tis the triumphal march with which the bridal party were to enter the saloon, and I am here. We must hasten hence or be discovered," and with a long, struggling sigh, she turned from her home!

They had proceeded but few steps from the door, when with one wild bound, Victor sprang in the midst of the group, and dashing the servant aside, endeavored to wrench Lucile from the grasp of her lover, while he presented a pistol to his breast.

"Yield her or die!" said he, as Sidney struck the weapon up with one hand, and with the other defended Lucile from his violence.

"Never—so help me Heaven. Back, foolish boy, and seek not to stain your soul with the crime of murder."

Victor ground his teeth with fury, and drew a second pistol from his breast—

"Hold," exclaimed Lucile, "'tis too late to claim me now. I am his in the sight of Heaven, as in the fervor of my own love."

"'Tis not too late to sever the bond," said Victor, firing as she spoke. The arm that supported her relaxed its hold, and Sidney staggered back against a tree.

"Oh, God—oh, God! what have I done to bring on me such extremity of wretchedness," shrieked the unhappy Lucile. "Back—back—touch me not thou demon of my fate. Till you came, I was happy—and hear me now swear before the God of my fathers, that if Sidney is the victim to your insane fury, I pour on you the curse of a stricken heart. Leave me, before madness comes and darkens the soul you have lain desolate." The roused soul that flashed from her dilated eyes, and lightened over her whole countenance, awoke her cousin into silence.

"Lucile, dearest Lucile! calm your agony," said Sidney, recovering from the shock he had received, "I am not wounded. Your dear image has been my guardian angel to save me from the weapon of you madman. Look," and he drew from his bosom a miniature which had been shattered. The gold setting had been a shield against the bullet of her kinsman, which but for it, had stretched him lifeless at her feet.

"Oh, God! I thank thee! any wretchedness I can bear but his loss," murmured Lucile, raising her clasped hands to Heaven, and bursting into a violent passion of tears.

For some moments General Montessor had stood a mute witness of the scene. He now broke silence, and in a voice which had lost none of its sternness said—"Tears well become you, and if they sprang from the right source, I might yet have some hope of recalling you to the sphere you have wilfully abandoned. Speak, degenerate daughter of my house—choose your fate—'tis the last moment of hope—abandon him to whom you cling—return to your home, and all shall be forgiven. Follow his fortunes, and I will never see you more—the pall of forgetfulness shall shroud your very being from my knowledge. Speak—decide."

"Oh, father! is there no hope? You will not cast me

off utterly—I am his wedded wife—forgive—forgive me, father.”

“Never—but on one condition. Those ties may be broken. Suffer them to become as though they were not, and I can clasp you to my breast once more as my daughter—but as *his* wife, never.”

Lucile raised her bowed head, and her fair cheek glowed with emotion, as she placed her hand in that of Sidney, and said—

“Then is my fate decided. I should be unworthy the name of woman—unworthy of the love which he bears me, could I forsake my husband. No, father: though you are loved deeply, dearly, my choice is made. I go forth to the world, to struggle, perchance, with difficulties of which I have not dreamed, but they will be sweetened by love, and may you not be haunted by remorse for the course you have pursued toward the child of her who lies in her silent grave. Adieu.”

“Hear me a moment, before we part,” said Grey. “General Montresor, you have treated me in this matter, as though I possessed not the feelings of a man, yet I forgive and I pity you; for you love your daughter better than your life, though your pride refuses to yield to her entreaties. If you can live without her, let your heart be at rest on her account. Her happiness shall be my first care, and though you have spurned my alliance, you know that you may confide her to my love with implicit faith.”

They turned away, and a turn in the walk soon hid them from view.

“Stop, we part not thus,” shouted Victor, maddened by the triumph of his rival.

“Forbear,” said his uncle, in a stern tone, at the same time laying a nervous grasp on the arm of his nephew. “Rather thank Heaven that you have not a human life to answer for. Let them go: a pair of love-sick fools—the dream will soon be over, and then you will be amply avenged.”

“No—a few appeals and you will forgive them—receive them again, and all will be forgotten,” said Victor.

“By my faith, no,” replied the old man with bitterness. “What I, who have so worshipped her, to be thus deceived, and forgive? Never was a father so devoted to a child. At night my last thought was of her; my last murmured word a blessing on that heart which has become estranged from me. When I awoke, it was with the glad thought that I should see her bright face smiling on me. I have followed her lithe and lovely figure with my eyes dimmed with the tears of affection and pride. She knew that she was the life of my life—the pulse of my heart—yet she has forsaken me. Can I forgive such base ingratitude? Never—never!”

Utterly overcome by his emotions, he sat down on the marble steps which led into the pavilion, and wept. A few words spoken at that moment in favor of his child, might have restored her to his arms as dearly cherished as ever, but the priest suddenly appeared.

“The company are still in silent wonder at your protracted absence,” said he, and lowering his voice he muttered something in the ear of his patron, which appeared to chafe his spirit anew. He arose, and after a brief struggle, regained his composure.

“Retire to your own room, Victor. That lowering brow is unfit for a scene of festivity. For me, my duty to myself calls on me to sustain my character before

those among whom I have dwelt for so many years.” In silence Victor obeyed—and stilling the mighty emotions that were wringing his heart, by the exercise of a pride, which by indulgence had become the master passion of his soul, he proceeded to the house.

“My friends,” said he in a husky tone, “you behold in me a forsaken father. My daughter has chosen to follow the fortunes of Sidney Grey. Henceforth I have no child. My nephew shall be unto me as a son, but the name of Lucile shall from this hour be an interdicted word. Let those who love me, or value my friendship, aid me in forgetting that I have a child. Our revels must not be interrupted by this untoward occurrence. Let us have music.”

And the sounds of revelry came from those walls, which, if nature had been allowed free course, would have echoed back the wailings of anguish for the loss of their youthful heiress. A hollow and unreal pageant was throwing its mockery over the aching heart, and burning brain, as if the sounds of mirth could bring the reality, or the spirit of melody could breathe into the soul its divine essence, and bid the warring passions cease—the sorrowful heart be joyful.

The priest, that dark and strange man, was standing under the shadow of the trees, and a mocking smile was on his pale lips as he stopped and listened to the mingled sounds which floated on the evening air.

“Aye—laugh—dance—ring out your joyous measures, but each note falls on *his* heart as a knell. Old dotard! to be played on thus, and by me—me, his dependent, his *spiritual* director—ha! ha! ha! I can laugh to think how completely this man, who lords it o’er his hundreds of slaves—who bows not his head to any man—is under *my* dominion: and if he knew *whom* he thus humbles himself before, Holy Mother! would there not be a reckoning between us! And I—what have I bound myself to his side for? Chained, Prometheus-like, with the vulture of the past preying on my soul. Heart of mine thou knowest I ‘bide my time,’ and ‘twill come ere long. I urged him to the unnatural course he has pursued toward his daughter. I played on the feelings of Victor, and used him as my tool. I performed the solemn rite which weds his child to poverty, and will bring him with sorrow and remorse to his grave, for he shall not relent. I will yet shew him *who* has done this, and *why* I have pursued him with relentless hate. Perseverance—perseverance—ha! ha! ha! what can it not accomplish? And now I go to view yon hollow pageant—to see the childless father throw over him the mantle of pride, which he fancies conceals the contortions of agony that convulse his soul; but he cannot deceive *me*.” And assuming his usual meek and quiet demeanor, he glided among the guests.

CHAPTER IX.

Gentle lady,

When I did first impart my love to you,
I freely told you, all the wealth I had
Ban in my veins; I was a gentleman:
And then I told you true.

Shakespeare.

Are we not one? Are we not joined by Heaven?
Each interwoven with the other's fate?

Fair Penitent.

Grey and his fair bride were detained in Havana some days, before the ship which was to bear them to

their new home, was ready to sail. In the meantime Lucille had written several times to her father, but her letters were returned unopened. Her efforts to see him were also unavailing.

General Montrossor had liberated the girl who had been reared with his daughter, with the secret hope that the affection of Agnes for her young mistress would induce her to follow her fortunes. In this he was not mistaken. Agnes was the daughter of Lucille's nurse, and the affection and fidelity of the colored slaves, toward those whom they have watched over in infancy, is frequently as remarkable as that shown by the Highlanders to their foster children. The first thought of the old woman, when her daughter proclaimed her freedom to her, was, that she could now accompany her beloved child in her exile from her native land.

"Now 'member," said she, "if you is free from master, you is still de bounden slave of Miss Lucille. I b'longed to her mother 'fore she was ever married, and if it wern't for dat will leavin' de property to master as long as he lives, she would'n't be turned out of her father's house now, wid nothin' to bless herself wid; so if you wants me to die easy in my bed, you'll go wid her, wait on her, do ebery thing dat I'd do if I was free to go wi' her too. Does you hear me, Aggy, child?"

"Yes, mammy, and I is gwine to do so too. Miss Lucille's always been kind to me, and I is'n't gwine to forget it now, when her own father turns his back on her." That night Agnes joined her young mistress.

The wardrobe of Lucille was forwarded from her father's, and on opening her jewel box, she found in it gold pieces to the amount of several hundred dollars. A slip of paper was fastened to it on which her father had written "Make the most of this, for 'tis all you will ever receive from me."

That evening they embarked, and Lucille stood on the deck of the ship until the last tint of daylight faded from the sky, straining her vision toward the dim line on the horizon's edge, which showed where that isle of beauty lay; and when she could no longer see the land of her birth, she sat down and wept such tears as are only wrung from a young heart mourning over its first deep grief.

Gray sat beside her, and sought to draw her from the contemplation of the past, to view that future which was opening before them; and as she listened to the tones of that beloved voice, they brought comfort to her soul, and gradually her tears became less passionate—soon they had ceased to flow.

"I have never told you the history of my parents," said he, as they leaned together over the side of the ship, and looked into the clear depths below, in which the Heavens, with each bright and glorious star, were mirrored.

"No—I have never heard you speak of your relatives, except as children, when we went hand in hand to deck the graves of our mothers with flowers: and do you remember, Sidney, how I cried because the marble tablet over my mother's grave prevented me from placing the flowers on the earth which covered her, as you did on the more humble resting place of your mother? That incident has made a lasting impression on me: I would not be buried under one of those cold, dismal looking stones, if my own wishes could prevent it. No—let the sun shine on my grave, the dews moisten it, and the green grass wave above my last resting place. Marble well represents the repose, the

coldness of death, but earth's flowers, springing from the dust to which we have returned, are types of that other life to which we are taught to look with that love and faith which casteth out fear. I remember your mother; and you are strikingly like her. I can see her pale, subdued countenance before me now, as she sat at her sewing, with those long, slender fingers plying her needle with unwearied industry. I remember her death, and the prayer of my own gentle parent that you might be henceforth considered as the child of her adoption."

"And I well recollect all her kindness to my orphan boyhood. My mother was not born to the station in which you first knew her. She was the daughter of a Virginia planter, and, while her father lived, enjoyed every advantage which competence could command. At his death she was left destitute. Security debts to a large amount attested at once his own good nature and the villainy of those in whose honor he had confided. Her father resided near the Virginia University, and at the time of his death she was betrothed to one of the students. He possessed a small independence, and no sooner heard of my mother's unexpected change of circumstances, than he insisted on being united to her at once. He had no near relatives to control his wishes, and she became his bride.

"He left the University immediately, and proceeded to his native place to prosecute the study of medicine. I will lightly pass over what followed, for it is too painful for a son to dwell on. In ——— he became entangled with a set of dissipated young men, and, forgetful of the new tie which bound him, he gave himself up to the reckless enjoyment of the passing moment.

"The consequences were utter ruin, a broken constitution, and to my mother an almost broken heart. He left ——— and went to a distant village, but could get no employment, and for several years they endured the extreme of poverty. Many times, to lose the sense of his degradation and suffering, he would return to the first cause of his misfortunes, and for days would lie in utter oblivion of all around him.

"He had one brother, many years his senior, who resided in Philadelphia, and but for his occasional assistance rendered to my mother in the shape of small sums of money, sent as he could spare them, they must have perished in spite of my mother's industry. She many times denied herself the rest which exhausted nature almost demanded, that she might continue a few more hours at her needle. At length my uncle wrote that all his hopes of reformation on the part of my father had been abandoned; but he would still offer him an employment which would make no call on the intellect, that had been obscured, almost destroyed by his course of life. A wealthy planter, residing in one of the West India Islands, had commissioned him to procure an overseer, and he offered the situation to my father.

"The prospect of employment, which would bring him a comfortable support for his wife and child, restored him in some measure to his former self-respect. From that hour he drank no more; but the remembrance of what he was, and what he had once fair prospects of becoming, embittered every moment of his life. He was ever kind to my mother; but for hours have I seen him walk the floor of our humble abode, and tears would stand in his eyes as he looked on her and called her his suffering angel. He related to me what I have now told you, and made every effort to impress on my young mind a horror of everything

approaching to dissipation. He bade me think of the moral degradation which he had undergone—the humiliating consciousness that a highly endowed mind and cultivated intellect had been bowed before the debasing influence of dissipation, until he was the mere wreck of his former self. 'Think my son,' he would say, 'what I must have undergone, when I, who had been nurtured among the refinements of polished society, could accept the employment of slave-driver to any man, and feel thankful that bodily strength is left me to attend to my duties faithfully.'

"We had been in Cuba but two years when he died, and was followed within a few hours by my mother. My uncle is a humorist—he has managed in a money-making country to keep clear of the mania of trade or speculation. He lives on the small property which he inherited from his father—it suffices for his few wants; and he has invited me to come and reside with him. You will be a daughter to him, my sweet Lucile, while I will endeavor to show my gratitude by every means in my power, for enabling me to win you from your loftier prospects to share my destiny."

"Be assured that no effort shall be wanting on my part to contribute to the happiness of your uncle," said Lucile: "I will be as a daughter to him in duty and affection."

CHAPTER X.

"And for their loves?
Behold the seal is on them!"

"Did I but purpose to embark with thee
On the smooth surface of the summer sea?"

Their voyage was prosperous, and they safely landed in Philadelphia. After establishing Lucile and her attendant at a hotel, Grey proceeded to look for the abode of his uncle. It was soon found, as the methodical old gentleman had given him the most particular information as to his 'whereabouts' in the city, but on inquiring at the door for Mr. Martin Grey, to his great concern he was informed that his uncle had been seized with a fit of apoplexy a few days before, which had proved fatal, and he had that morning been consigned to the dust. His informant added, that some gentlemen were now in his room, reading his will and putting seals on his property.

"Go in and inform them, if you please, that his nephew has just arrived from Cuba, and would be glad to be present at the opening of the will."

The woman went in, and immediately returned with a gentleman who introduced himself as Mr. McFile, the legal adviser of his deceased relative. He invited Grey to follow him, and in a few moments they were in his late uncle's apartment, which was occupied by three other gentlemen.

They all wore the most lugubrious expression of countenance as they shook the nephew of their lost friend by the hand, with the most sympathetic expressions on the great loss the country, and they in particular, had sustained in the defunct Mr. Grey.

"A man of ten thousand," murmured one.

"Ah yes—so benevolent—so kind-hearted," chimed in another. "The voice of distress was never unneeded." And thus they chorused the praises of their lost friend, until Sidney became impatient for them to proceed to business, for however gratifying the high

estimation in which his deceased uncle had been held, he could not still the fearful whisper which came to his heart, that this relative whom he had never known might in his last days have repented of his intended generosity, and left him destitute. His forebodings were too quickly verified.

The will was at last opened, and to his utter consternation the slow, monotonous voice of the lawyer read over an instrument, dated but a few days back, by which he bequeathed all his possessions to a certain benevolent society, to be appropriated to the erection of a church for the use of the German emigrants to the United States.

"There are a few lines below, written by my friend's own hand, which concern you, Mr. Grey. Shall I read them to you?"

"If you please, sir," said Sidney bowing.

He then read the following words. "To my nephew, Sidney Grey, I had intended to bequeath all my property; but learning from himself that he was about to commit the romantic absurdity of marrying a girl who has been reared in idleness and extravagance, merely because she has the most fleeting of all charms, beauty; and at the same time robbing his patron of his daughter; to show my utter disapprobation of such a proceeding, I hereby cut him off with one shilling, with which he may go and buy a rope wherewith to hang himself, for the mad freak of which he has been guilty will soon leave him no other alternative."

There was a pause of some seconds, which Grey interrupted by rising and bowing to the gentlemen as he said—

"As there can be no farther need of my presence here, gentlemen, I will bid you a good morning. I had anticipated a very different meeting here to-day, but fate has otherwise ordered it, and I must submit. I shall not interfere in any way with the settlement of the estate. Good morning to you."

"A clever young fellow," remarked one, as the door closed on him; "and uncommonly fine-looking. Well I'm sorry for his disappointment, and think our friend had better have left something to the poor young things to commence housekeeping with. It's likely he's very poor, for I've heard my late respected friend say that he was educated by that West India planter, whose daughter has eloped with him. Well, if charity did not begin at home, I believe I could find it in my heart to hunt him up, and try and find something for him to do."

"Do not give yourself that trouble, I beg," said a tall, noble looking man, with a slight inflexion of contempt in his voice. "If Mr. Grey's appearance does not belie his character, he shall not want a friend while I can assist him. I regret exceedingly that I neglected to ask him for his address. I shall seek him before night, and offer him such services as one stranger may without offence proffer to another."

"Well—well—let it be so—you can afford to be generous."

The man who thus spoke was a bachelor, with a clear income of some thousands, but without one spark of generosity, except at the expense of others, in his heart. The second speaker was one of the most successful merchants in the city, and had risen to the station he occupied by his own energy and integrity: his residence was one of the most splendid on Chesnut street, and he was surrounded by a young and lovely family; but amid his present prosperity he did not forget his

own early struggles, and the promptings of benevolence were never unheeded.

He had been deeply interested by the appearance of Grey, and his imagination rapidly sketched the probable sufferings which would result from the disappointment he had that morning experienced; his wish was to obviate them as far as possible, but his benevolent intentions were frustrated. He spent the remainder of the day in driving from hotels to boarding-houses in vain. There had been such a gentleman at the United States Hotel for a few hours in the morning, but he had departed at twelve o'clock no one knew whither; and baffled in his search, Mr. Edmonds was compelled to return home without accomplishing his benevolent intentions.

Stunned, bewildered by the unexpected occurrences of the morning, Sidney mechanically retraced his steps to the hotel, though when there he shrank from communicating to Lucile the misfortunes which had met him in the very outset of his career. All the accumulated difficulties of his situation stood in vivid array before him,—a stranger in a strange land, with but few dollars left after his travelling expenses were all paid—with no knowledge of business—possessing only a few paintings, whose merit he well knew was not sufficiently striking to attract purchasers—with a newly wedded wife, dependent on him for support. He felt that her brief sunshine of happiness was over—the darkened days had already commenced.

His intention had been to accept the home offered him by his uncle, while he diligently pursued the cultivation of his art, and by the study of the few fine paintings within his reach, correct as far as possible the defects of a self-formed and imperfect style. In the meantime, a portion of his attention he designed to give to portrait painting; and the resources thus obtained were to be devoted to the purpose of raising a fund to convey him to Italy—the land of his dreams—the wished for haven to which all the aspirations of his soul pointed. After a struggle for composure, he entered the room where Lucile was eagerly expecting him.

"Here you are at last, dear Sidney—I thought you would never return, my impatience has been so great to hear from your uncle. How is he? What said he? Was he pleased to see you? Tell me all in a word."

"It is soon told," said Sidney mournfully. "The old man is dead, and we are friendless." He then proceeded to relate what he had learned. Lucile listened in silence: she saw at a glance the full extent of the calamity which had befallen them—though he concealed from her that he owed the loss of his uncle's property to her consent to become his bride; but her spirit rose to meet the evil, and she looked on the future with an unquailing eye.

"Poverty is not the worst of ills, dear Sidney, as I well know," said she. "We are now entirely dependent on our own resources, and no false pride should prevent either of us from doing what is necessary to secure an independence however humble. I have contemplated the possibility of disappointment, and weighed the probable consequences of an union with you before I consented to link my fate with yours—therefore, my mind is not entirely unprepared for the difficulties which we are likely to encounter. Let us calmly examine our situation, and the extent of our resources—then decide our future course."

"I have but fifty dollars in the world, and some half

dozen paintings not entirely completed, which cannot bring me into notice without patronage of some kind."

"Your genius shall raise you up friends and patrons when you least expect it," said she playfully; "for the present, I am fortunately richer than you, and our united funds will support us very respectably until you have time to become known and appreciated. 'Faint heart never won fair lady,' as the old adage goes—so

"Prishee look no more so pale,
But list a new *Aeps* when the old doth fail."

"Who would refuse to listen to the whispers of hope when breathed in such a voice as thine, and enforced with such a smile?"

Lucile opened the dressing case and gave him the gold, which had been her father's last gift.

"Here," she continued, "are my jewels. They are not of great value, considering that I was the heiress to such vast wealth as my father possessed; but such as they are, they may become a resource to us if reduced to the necessity of parting with them."

"May heaven avert such distress as that would portend," said Grey fervently. "No, dearest—your jewels must remain untouched so long as any other means of subsistence are within my reach. In the meantime the sum before us will suffice until I become acquainted here."

"As you please," replied Lucile. "We must seek boarding in a less expensive house than this, and perhaps the keeper of the house will employ Agnes, and thus allow her to gain a support for herself without being separated from me?"

"You cannot do without her services, my love. What would become of you, with your creole habits, without some one to wait on you? These delicate hands do not look as if they could accomplish much. No—no—you must not part with Agnes."

"Oh, I can learn to wait on myself; and I think it would be positive injustice to Agnes to keep her with me, while I am unable to pay her the wages her services can command—and I know the faithful creature too well to believe that she would receive money from me which she saw I needed myself. So, dear Sidney, allow me to arrange this matter if you please."

"Well—as you will, my dear little wife. Why, from whence did you obtain all this stock of wisdom, *ma belle*?"

Lucile blushed and smiled. "It has been taught me, I suppose, by my affection for one who possessed few of the gifts of fortune. I can make any sacrifice, Sidney, sooner than suffer you to abandon the art to which your soul has so fondly clung from boyhood, to gain a pittance in some other occupation, in order to shield me from a few privations which my mind is fully prepared to encounter. Let us not despond—for believe me, I would not be elsewhere than by thy side; and heaven never linked two hearts in as pure a bond as ours, without pointing out to them the pathway which would lead them to happiness."

"Your faith is a consolatory one, Lucile, and I will e'en trust to it. My regrets are not for myself, but for you. I fondly anticipated bringing you to a comfortable home, where no harrassing anxiety and uncertainty for the future should dim a ray of your beauty, and the disappointment is proportionably severe."

"Think not of me. If you could look into my heart, and see there the happiness it gives me to be near you, with the consciousness that death alone can sever me

from your side, you would indulge in no fears for my future peace."

"Noble—admirable girl! I knew thee not till now! No lot can be dark which is brightened by such affection."

With a light heart, Grey proceeded to make his arrangements. He went into the bar-room, and looked over the numerous cards which adorned the walls; and after making a few inquiries of the bar-keeper, his selection of a boarding-house was soon made. He then called for a carriage, and driving to a retired street in the city, found the domicile of Mrs. Patton, a neat and unpretending mansion, in which he engaged rooms that promised to be very pleasant. Within two hours from that time Lucile was established in her apartment, the windows of which looked out on a green and shaded walk, which reminded her of the verdure of her own sunny land.

CHAPTER XL

In this wild world the fondest and the best,
Are the most tried, most troubled, and distress'd.

Crabbe.

Good heaven! that sots and knaves should be so vain,
To wish their vile remembrance may remain!
And stand recorded at their own request,
To future days a libel or a jest.

Dryden.

Some months elapsed, and Lucile would have been perfectly happy, but for the continued silence of her father. She had not believed it possible that he could remain callous to her appeals. She still continued to write regularly, though the hope of forgiveness had almost faded from her mind: yet she had not repented her clandestine marriage. How could she repent, when the affection of Grey never slumbered? If he saw the faintest shadow on her brow, he would not leave her side until it was dispelled.

Grey had formed a few acquaintances among men of his own profession, and several of them had visited his studio. Their criticisms on the productions of his pencil were valuable to him, as they enlightened him yet more on the utter impossibility of a young and unknown artist, imperfectly trained in his profession, making any progress in public favor, until years of intense study and unwearied industry had given their last polish to his labors, and the question frequently recurred to him, how was he to exist in the meantime? Already was their pittance nearly exhausted, and he saw before him no means of replenishing his little store. In vain had he placed a sign on the most conspicuous part of his window bearing in goodly-sized letters the words, "Sidney Grey, Portrait Painter," and filled up the lower part of the sash with two of his best heads. The children and servants of the neighborhood admired and criticised them each day, but they brought no "human face divine" to the artist, to transmit to posterity, in all the glory which white lead and vermilion can bestow.

Many times did his spirit faint within him, and his hand fall nerveless by his side, as the possibility of failing in his efforts presented itself to his mind; and if such were his doom, to what a destiny had he chained the being, whose affection had been the solitary flower in his sterile path!

In addition to his other sources of uneasiness, he began to fear for his health. During the winter he had suffered excessively from the cold weather, and a severe pain in his breast had frequently compelled him to lay aside his pencil for days at a time. Yet all this was studiously concealed from Lucile; and when she expressed her fears that he was not as well as usual, he would seek to re-assure her by assuming an air of gaiety, and rallying her for indulging in such fancies.

Late in the spring he completed a fancy piece representing a gipsy girl in a storm. She was standing under the shelter of a tree, endeavoring to regain her bonnet which the wind had whirled among the lower branches; and in the oriental style of her beauty—the dark dilating eyes, and lustrous hair, might be traced a striking resemblance to Lucile. She smilingly remarked it.

"I saw you once in the same attitude," he replied, "and in truth that suggested to me the idea of the picture."

Through the interest of one of his friends, he procured a place for it in the public exhibition of pictures. The painter, unknown to all, mingled in the crowd and heard the strictures on what he considered his *chef d'œuvre*.

"What a glorious head," said a connoisseur with his blackened tube placed to his eye. "I do not know who could have executed it. I have never before seen such spiritual beauty in any face."

"Ah," thought the lover husband, "the original is yet more lovely than that;" and he fancied the radiant smile with which his return would be greeted, and mentally repeated the celebrated remark of the English statesman, that "the best part of beauty is what a portrait can never express." But his attention was recalled to the answer which was made to the first speaker.

"Yes—as you say, the head is glorious, but the rest of the picture is not at all in keeping. It is wonderful that the same hand should have executed both. The picture wants perspective, and the foreshortening of the arm is defective, the hand is good enough—nay uncommonly good, for a young artist, and ——— told me just now that this picture was executed by a young man from Cuba. He possesses uncommon genius, but his faults are many and glaring. The drapery is in very bad taste."

"True—but those flowers growing at the feet of the figure, and that sandalled foot, are exquisite. The painter has studied from nature alone, and where he has imitated her, he is unrivalled. A year or two in Italy would render him master of his art."

They passed on, and another group occupied the space in front of the gipsy. "A mere daub," drawled a fashionable exquisite. "Look at those folds—there is no grace—no elegance about them."

"But surely, there is beauty enough in the face to compensate for that defect," said a young girl, with a bright ingenuous countenance, who leaned on his arm.

"No,—Miss Wilmore, you mistake. The drapery of a figure is to a picture what fashion is to beauty—without it 'tis nothing. The man that painted that thing had better follow the example of that—a—a—what's his name—in the Disowned?—go and burn his picture, brushes and all, and——"

"And after giving up the art to which he has dedicated his life, I suppose he may die as the poor Werner did, 'unwept, unhonored, and unsung?' unless perchance he has an old parent, or a beloved wife to weep over the fate of the gifted. Ah, you little know the unmitigated anguish your words might have conveyed to the soul of the artist, had he heard them and believed you to be a true *Mecenas*."

"Really you are quite eloquent."

"Shall I tell you the reason?" said she. "I know something of the history of the painter—nay have seen him once at a distance. I am now having my portrait taken, and Westfield is well acquainted with Mr. Grey. He conjectures that his circumstances are not good, and he describes him as possessing more of the true spirit of genius—more enthusiasm for his art, than any one he has ever known. He is very young, and has a wife whom all agree in describing as the most beautiful of women. I should have called on her, but was told that both appeared to shrink from society, and she is seldom seen abroad until late in the evening, when she generally walks with her husband. If my papa will consent, I intend purchasing this picture with all its defects."

The gentleman shrugged his shoulders. "You will soon have a fine collection, if you intend listening to every romantic story that is told you about these painters, and patronize them because they happen to be poor, and have pretty wives."

"Those are not *exactly* my intentions," said the lady, "but 'tis useless to endeavor to make you understand them; for they and myself, must ever be to you as a sealed book." And they passed on.

As various as the characters who uttered them, were the comments made on the picture, and Grey returned home wearied and out of spirits. The next morning as he sat beside his easel, with scarce resolution sufficient to make an effort at completing the piece before him, a knock at his door aroused him, and an elderly gentleman entered, accompanied by the same young lady he had seen at the exhibition the day before. The old gentleman presented his card.

"Mr. Wilmere—and this is my daughter, Mr. Grey."

Sidney bowed; and after examining and admiring the various pieces that surrounded the room, Mr. Wilmere informed him that he had called, at the earnest request of his daughter, to purchase of him the picture of the gipsy girl, to which she had taken a great fancy. The price was named—the money placed in his hands, and both father and daughter departed with many expressions of good will toward the artist.

"I will never again despair," thought he as he placed the money in his desk. "I must now seek Lucile, and describe this noble-hearted girl to her."

A few days afterward a lady called on him to paint her portrait. It was the first call of the kind, and he soon learned that he was indebted to the same source for this patronage.

"Miss Wilmere," said she, "has shown me a fancy piece, painted by you, and she assures me that the *connaissance* says the head is quite the perfectibility of beauty."

"Mr. Grey, I wish you, in the first place, to paint my daughter—and I have brought you a picture of her taken before she died."

"You merely wish a copy then, madam?"

"No—not *exactly* a copy," continued Mrs. Brown, drawing a small picture, done in crayon, from her reticule. It represented a girl of about fifteen with her hair folded back from her temples, simply twisted and confined with a small comb. The features were very ordinary, and Grey wondered if the mother expected him to take a correct likeness from the slight sketch before him; but he soon found that she expected even more than that.

"I wish you, Mr. Grey, to paint my child from that, but give her a little more of the look of a woman, and put her hair up in the fashion. I cannot consent to have it drawn back from her forehead in that frightful manner. I should like to have it in ringlets."

"But surely, madam, no picture can be to you a resemblance of your daughter that is made to look some years older, and to alter the whole cast of the countenance by dressing the hair in a different style."

"Oh, as to that, I'm not particular, so it's a pretty picture, and looks fashionable. It looks well to have one's family portraits, and as my daughter died before we moved here, it doesn't signify whether it's a likeness or not, so it's pretty. Nobody'll be none the wiser about it's being a good likeness or a bad one, except ourselves, and we can keep our own counsel."

"Very well, ma'am. I think I can please you," said Grey.

"Well, I'm glad to hear it, for I've been hesitating about sending over to London to have both her's and mine properly painted; but 'tis such a trouble, that I'm glad to get it done here."

"Yes, madam, a voyage across the ocean, merely to have a portrait painted, would be rather tedious."

"Deary me—deary me! you don't suppose I was going across the seas myself, risking my life in the terrible storms that take place—and all for a picture that could be done without me?"

"I did not understand you, madam," said Sidney, in some surprise. "I thought you wished a likeness of yourself, and of course presumed that you would wish to sit to the artist that it might be as correct as possible."

"And so I do want my picture," said the lady, with some asperity. "And I guess it can be imported as well as Mr. Brown's goods. It will come to order, I suppose, as his credit's good on that side of the water as well as this. I can send 'em word what sort of a face I have, and the color of my eyes and hair, and they can paint me, and put a dress on like the print of the last fashions, and I shall be very well satisfied."

Grey listened in silent wonder: he instantly perceived the sort of character he had to deal with. Mrs. Brown was one of the vulgar rich—ignorant, fond of show, and by the acquisition of wealth elevated to a position in society which she had not been educated to fill. Her blunders were a source of amusement to the society in which she had been transplanted; and knowing that she was liberal in her expenditures, Miss Wilmere had suggested to her the propriety of employing Grey to execute the long talked of portraits.

With renewed hope, Grey set to work the following morning, with Mrs. Brown by his side, watching the progress of his pencil; but before the pictures were half completed, he felt that the sum which was to be paid for them would be hard earned.

Her daughter she first wished him to paint as a

Hebe. A spirited sketch was soon drawn, but in the meantime the good lady happened to meet with an antiquated copy of the Children of the Abbey, and, strange to relate, that romantic story, which has drawn fountains of tears from young misses over the sentimental misfortunes of Miss Amanda Malvina Fitzallen, had never before fallen into her hands. The description of the portrait of the heroine's mother captivated her fancy, and the Hebe must be changed to a shepherdess so soon as the brush of the artist could accomplish the metamorphosis. After various alterations, he succeeded in completing a very pretty fancy piece, the principal figure in which resembled any one else as much as the person for whom it was designed.

However, the mother was satisfied, and it was sent home to adorn the walls of the newly furnished parlor; and that of the lady herself was commenced. Here Sidney found his difficulties increased ten-fold, for in spite of the evidence of her glass, Mrs. Brown persisted in thinking that she was still quite young enough to make a very fine picture; and her style of dress was fantastic to the last degree. In vain did Grey remonstrate—in vain did his good taste revolt from painting a figure tricked out in a style which might have rivalled the broadest caricature of the fashions: Mrs. Brown carried the day, and she was represented seated on a sofa, attired in a gown of scarlet velvet, with rings, chains and brooches innumerable, disposed about her comfortable person.

He labored at first to make the likeness as striking as possible, but in this he was likewise baffled by the vanity of the woman: "this feature must be softened—another more rounded—the eyes lacked brilliancy—the lips were a little too thick,"—in short he found himself compelled to make her portrait as little like the original as that of her daughter. The day on which they were completed was a joyful one to him.

That evening Mrs. Brown gave a large party, and the pictures were severely criticised by those who pretended to know any thing of painting. Caroline Wilmore was there, and her praises excited the irritability of an old gentleman who considered himself an indisputable judge, as he had once spent six weeks in Europe, had visited the Parisian gallery twice, and remained an hour each time.

"That a likeness! my dear Miss Wilmore," said he, scornfully pointing to the luckless shepherdess; "why you may as well tell me the engraving on my snuff box was designed for you, as that thing there for Kitty, or (as her mother has refined the name) Miss Kittina Brown. She was Brown in color as well as name—dumpy and pug-nosed. That figure is graceful, and the face is almost beautiful. Pooh—pooh! this *protégé* of your's may paint very pretty fancy pieces, but a *likeness* he never can accomplish. If proof were wanting of that you need only look at the mother, and see what a ridiculous looking figure he has made of her, without the slightest resemblance to the original."

"Well, we will not dispute about it," said Miss Wilmore, good humoredly smiling—"I am going to the springs to-morrow, and shall be absent all summer, but when I return I will have my portrait taken again to convince you that my *protégé*, as you call him, can succeed in taking a likeness of one who is willing to be painted with only the share of beauty which na-

ture has gifted her. Depend on it he was not allowed to be faithful in his delineation of our hostess, and I should never have recommended her to him had I not believed him to be in reduced circumstances, and thought her money would be as acceptable to him as that of any other person."

Miss Wilmore was absent four months, and when she returned, she had not forgotten her promise. She sought the abode of Grey, but was informed by the landlady that about a month before that time, he had left her house, and she could not inform her whither he had removed.

"He got very little to do, ma'am," said Mrs. Patton, "and I'm afraid all his money was pretty nigh exhausted before he left me; for he was very low-spirited at times. His health wasn't as good as it had been: the cold weather last winter seemed to be very hard on him, for he had a cough all the time, and his wife, poor thing, appeared to be miserable about him. I've many a time seen her start and turn pale when she heard that hollow cough, and my heart ached for her."

Miss Wilmore was deeply interested by this recital.

"Are you sure, madam, you can obtain no clue to their present residence?" she inquired.

"I do not think it will be easy to do so, but I can make the effort. When they came to me, they had a colored girl with them, who had been freed by Mrs. Grey's father, but she would not consent to leave her young mistress. I gave her employment until about a week before they left me, and she then hired herself in another part of the city, though she came every night to see Mrs. Grey. I sometimes see her, and perhaps she will inform me where they now are."

"I shall be much obliged to you, madam, to make the inquiry, as it may be in my power to render some services to Mr. Grey and his lady."

"Rely on me, my dear Miss Wilmore. I will do all in my power to discover them, for I have never seen strangers with whom I was more pleased."

All the exertions of the good Mrs. Patton, were, however, unavailing. She saw Agnes no more; and every clue to the 'whereabouts' of her late boarders appeared to be forever lost.

[To be concluded in the December number.]

TO CAROLINE.

WRITTEN IN HER ALBUM.

I would not say that thou art fair, dear girl,
Nor tell thee of thy graceful, comely form,
(Tho' in these gifts fond nature has been kind;)
For they are frail possessions, and may last
But the brief period of the transient hour.
Sorrow, or sickness, or relentless time,
May waste that frame, or mar those magic features;
But in the precious virtues of the heart,
(Where Love and Truth and Innocence abide,) Thy worth consists: these are enduring charms
Which dark Misfortune has no power t' impair,
But rather makes more radiant by his frown:
These are the founts of Peace, and may they flow
Unhindered forth till life itself shall cease.

M. W.

HOMEWARD BOUND—OR THE CHASE;

A TALE OF THE SEA.

By the author of "The Spy," "Red Rover," &c. Carey, Lea & Blanchard: Philadelphia.

We welcome the wanderer back once more to the sea—the open, the grand, and stirring sea. Mr. Cooper has of late been traversing Europe in a stage coach, and whilst thus out of his proper sphere, his genius has not exercised itself in those delightful flights that formerly bore the author to eminence, and afforded to the public a new and graphic species of composition. We have often wondered how a man with an imagination so powerful, and naturally so healthy, could have toiled up the steep ascent of barren hills, when the broad and accustomed seas lay before him, where he could have freely sailed, the fearless and powerful describer of their glory. Truly then do we welcome him back to his element of fiction—right glad that he has given his flag to the wild breeze.

"Once more upon the waters! yet once more!
And the waves bound beneath 'him,' as a steed
That knows his rider. Welcome to the roar!
Swift be their guidance, whereso'er it lead,
Though the strained mast should quiver as a reed,
And the rent canvass fluttering strew the gale."

We have ever viewed Mr. Cooper as a national writer, who had borne in triumph—conscious of the great burthen—the grand features of his native land to the incredulous vision of Europe; and we had hoped that these features thus impressed, his mind would have preserved, pure and uncontaminated, from the petty vulgarisms of continental romance or sentimentalism. The indiscriminate praise that followed his earlier efforts, dazzled the quondam midshipman—and he rushed along his path, coruscating like a star that had limit neither to its brightness nor its orbit; and we felt proud that a light had arisen over our fields, and the willing heart of the American public was poured forth in tribute to its dazzling rays. That star of excellence shone in the "*Spy*," over the red field of battle, where lay

"Rider and horse, friend, foe, in one red burial blent."

And we watched it in the "*Pioneer*" as it ascended over the snow-capped mountains, and silvered the locks of old Leatherstocking—dear and muscular hunter! Afterwards amid the everlasting but ever-changing cataracts we hailed its light, and the "*Last of the Mohicans*" walked abroad under its ray of magic, into the leafy solitude, and entranced our admiration by the softened tread with which he moved amid the mysterious gloom. It was not long after, that the "*Prairie*" was lighted from the same source—and who will ever forget that has read that powerful novel, the frightful picture of Ishmael, hanging in the windy night to the oaken bough, hung there by the stern patriarch of the wandering settlers? Again the figure of Leatherstocking, that exquisitely wrought picture, arises to our vision. We see him with his favorite rifle, and that sinewy and solitary dog, the faithful and the free; and we almost sigh for the trackless wastes, the shaded dells, and the rushing deer; and we muse joyfully—sad

upon the far walkings and independent life of that venerable hero. It was in those glorious times of fame, ere yet his foot had trod in love the land of the foreigner, while yet his heart lingered without spleen or satire upon his own free clime, that the star of his Amsterditz kept its warm place in the glowing skies. Why did Mr. Cooper ever abandon those sunny paths? Why did he turn abruptly to the dogmas and the doubts of the politician? Why leave the marble pavement of the temple to riot on the sanded floor of the miserable beer-shop? These are questions pertinent to his fame, and which we have a right to ask. Mr. Cooper's reputation is identified with the literary character of the country, for he has stamped the genius of American naval and descriptive romance upon the age, and he has opened a way of fiction that many have pursued with varied success. Mr. Cooper is the author of the peculiar marine style that has often delighted us in the "*Red Rover*," and when we opened "*Homeward Bound*," we felt assured from the title alone that he would preserve his reputation. Standing at the fountain head of American fiction, he should have felt like a brave knight, with buckler on, and lance in rest, ready to assert the purity of his lady-love, or in other and plainer phrase, to have kept up to the mark of his former achievements. We had a right to expect this at his hands; for, doubtless, he agrees with us in the opinion that romance, with moral ends, is a vast engine of activity upon an imaginative people, (who always have their peculiar sympathies to be affected by a peculiar school of writers,) for it stirs up their blood and fills their big veins with a noble enthusiasm, leading directly to the fruition of honor, liberty and law. We cannot stop here to lay before our reader the reasons that have conducted us to this opinion. To those who wield the attributes of this power, appertain many hopes that no lips have yet expressed, but which many hearts, studious of philosophic results, have felt. We confess to those dim and indistinct, but no less effective hopes, and our constant aim in the peculiar sphere in which we move, has been to do honor to the necromancers of fiction.

The public journalists of this country have of late years been unkind, but not ungenerous to Mr. Cooper. He has been lashed for his wasted manhood; and the victim of disappointment feeding upon vanity, he has turned upon the press and evoked the thunder upon its exposed and lacerated shoulders. This is not as it should be. A sailor, brave by profession, robust in mental resources by nature, he should have stood like Caesar's tortoise-shielded troops, in the face of a thousand arrows. The native press has been the means of his fame, and is yet willing to do honor to its arch traducer, if he will but abandon the low and grovelling ambition of the politician, and plume himself for a literary immortality. That much abused press will aid the eagle of our literature in his flight, and when it sees him perched upon "the difficult mountain tops," the loftiest alp of the world's applause, will cheer him with its judgment, and assist him in poising his reeling wings in an element that after all may be uncongenial to his nature. The work before us is full of direct abuse of the press, and we cannot find a word in the two volumes expressive of that gratitude for past favors, which, from a decent respect for the requisitions of society, he should have feigned, if he could not have felt. Though Mr.

Cooper is destitute of gratitude, he has genius. We did not need the "Homeward Bound" to prove that to us. The works to which we have alluded, in the opening of these remarks, bear testimony that a mind of high gifts had glowed over their pages, and that the creative power had built up in the wilderness of the prairie a monument in that behalf.

The "Red Rover" was the crowning work of Mr. Cooper, and though it is now many years since we read that glowing book, the impression of its beauties—of the great descriptions scattered over its leaves—is vivid upon our mind; for, then the author was innocent of argument—innocent of the French mania for politics and philosophy, and he swept the seas, and scattered on every Atlantic wave, gems as brilliant as their own pearls. We again thank him for this evidence of a return to his former realms, and take it as an earnest of repentance for past errors, and amendment for the future.

We will now proceed to a particular description of the work before us, "Homeward Bound," and we enter upon our task with the best feelings imaginable towards the author.

The story of this work, is the story of the sea, and tempest and battle are blended in the plot; and wherever the author has devoted himself to the description of these incidents, we recognize the hand of our own graphic Cooper.

A party of travellers, some of whom had passed through the sickly stages of European ton, are returning to the United States. There are the three Effinghams, two cousins, and a daughter, Eve Effingham, the heroine—Mr. Sharp and Mr. Blunt are incognitos, the one a private gentleman, the other one a baronet of England. Both these gentlemen through caprice or necessity have disguised themselves, and are quite necessary and interesting in the web of the drama. Mr. Blunt, especially, becomes a hero of no common order.

Mr. Dodge, editor of an American newspaper, and consequently no favorite with Mr. Cooper, is made to utter as much nonsense as should gratify Mr. Cooper's spleen for the balance of his life; but Mr. Cooper must reconcile the seeming incongruity of an editor, so ignorant as he represents Dodge to be, travelling over Europe and writing letters home, that are received with unbounded praise by the American press. The naturalness of the novel should march onward *pari passu* with its incidents, and with as much regularity as the progressive steps of history; and Mr. Cooper is culpable in a high degree, for introducing characters in his plot, that disgust by their grovelling ignorance, and yet puzzle by their *mal-apropos* brilliancy.

Captain Truck figures largely, and always appropriately in the narrative; and there are two or three others, mates first and second of the packet ship Montauk, (in which our heroes all are placed,) that help out the catastrophes, and mingle in the procession.

We will not anticipate the reader's curiosity, by sketching at length the history of the "Chase," for we have no right to forestall the public curiosity or impede the sale of the book. We are willing believers in the romantic power, and like to take our own perusal of all new works of fiction, in pretty much the same spirit that actuated the newspaper taker, who would never read a paper that had been handled before him.

under the impression that the news was news no longer. The virgin leaf of a novel is sacred to the true novel reader, and jealous is he of every type that dots the flight of the poetic mind—our's be then the province to glance at the beauties of these volumes, and discuss with their gifted author matters of taste. To praise is our delight, though censure is so common to the reviewing tribe, that we shall hardly be forgiven, if we blend not sarcasm with approval. We will have sufficient cause for both as we proceed.

In the first place the delineation of the heroine, Eve, proves that Mr. Cooper is ignorant of those delicate conceptions of feminine character, that should distinguish a novel writer; and she moves before our eyes the artificial boarding-school girl, ripened through the tortuous avenues of affectation, into the cold and stately patroness of prudery. She talks in pedantic sentences, and seldom or ever descends, save when frightened into it, to those soft and melting moods, in which women seem to us all angelic.

The story opens with Eve and her father, leaning over the side of the packet ship; and while they gaze upon the broad seas foaming afar, the parent remarks to his child, "We have seen nobler coasts, Eve, but after all England will always be fair to American eyes." She replies, "more particularly so, if those eyes first opened to the light of the eighteenth century, father." The eighteenth century lisped by a young girl in her teens! Now, to our ideas of remark and rejoinder, in a conversation held between parties so united, the response would have been eloquent with the white cliffs and the green fields of merry England—with any thing but philosophy—for there is a philosophy and a sarcasm too, in the reply, that no girl of Eve's age would utter to a father, without exposing herself to the charge of egregious pedantry.

This first remark of the heroine, does not prepare the reader for a very natural girl, speaking honestly and openly, and as a girl of the nineteenth century should speak.

"I have been educated, as it is termed, ('as it is termed!') what else could it be termed?) in so many different places and countries," returned Eve, smiling, "that I sometimes fancy I was born a woman, like my great predecessor and namesake, the mother of Abel. If a congress of nations," continues the philosophic heroine, "in the way of masters, can make one independent of prejudice, I may claim to possess the advantage. My greatest fear is, that in acquiring liberality, I have acquired nothing else." Now the iron of dislike has entered into our heart, and we cannot study the character of Eve with any degree of pleasure, and we turn away constantly from the cold and marble surface of her nature, that thus seeks every occasion to bewilder our senses, with far-fetched references to a congress of nations assembled on purpose to veto prejudice in a young girl's noddle, and to mother Eve, progenitrix of Abel, and why not of Cain, who was after all the hero of that mental reference?

Many pages are subsequently occupied by dull and heavy dialogues between the Effinghams—for we cannot call them conversations—a term implying an easy and unstudied flow of language and natural interchange of opinions—but dialogues, in which each party speaks as if by rote; and we regret to see that here Mr. Coop-

er's evil genius shines forth fearfully bitter. Ill nature, a violent and savage hatred of the press, constitute the monomaniac features of Mr. Cooper's mind in certain stages; and we turn, with a feeling of sickness, from the formal abuse of a literary man, uttered against his country, and against the cherished engine of liberty—the public, independent and unshackled press.

Passing from these heavy portions of the work, we approach a graphic and highly finished scene—the search among the crew and emigrant passengers; of the latter a large number were on board—by a police officer, and a lawyer from Liverpool, for a man who had married a girl against the consent of her uncle. The author has managed this scene admirably. We sympathize with the lovers, and enter into the full spirit of free-masonry that actuates the crew to conceal the parties. Every body aboard knows who they are, but yet not a finger is raised to point them out to the greedy ministers of the law. A little boy is asked by the cunning attorney if he knows "Robert Davis" the bridegroom, and the answer of the curly-haired urchin relieves the fear we felt, lest the flying lovers might then be handed up to the rapacity of the girl's uncle. But though bribed, the child denies all knowledge, and the little Spartan has our sincere respect for his fortitude.

It is at this point that the story commences to correspond with the title, and the regular fabric of the tale opens itself to the reader. The whole history of that long chase grows out of the stubbornness of captain Truck, in refusing to yield to the civil authorities of Great Britain the bride and the groom. There are other causes, that as yet operate darkly to hasten the captain of the packet into a course, that draws along with it the catastrophe of long sailing, through perilous seas, even to the "far Afric." While captain Truck is maneuvering so as to balk the pursuit for the "lovers twain," a man-of-war's cutter is seen approaching over the waters, and the captain supposing her to be connected in some way or other with the civil search, sets his teeth hard, and with *Vattel* in his left hand, and his trumpet in the right, American-like, puts every energy to work to outdo the "British." The cutter in vain attempts to overhaul the *Montauk*, and returns to the "man-of-war." Then comes the sullen boom of the signal cannon to the ears of the *Montauk* people, and her captain begins to suspect that a storm is brewing over the track of his return passage. After consulting with *Vattel* upon the laws of nations, the gallant Yankee tightens his ropes, and sets his canvass for a swift run, and is off for the new world, catch him who can. It is on such themes as those connected with the excitement of a naval adventure, that our author displays his power. We see at once the relative position of the man-of-war and the *Montauk*, and we hear the rush of each through the contending billows. Beautiful sight! Two dark and mighty vessels sailing through the far-surg-ing spray, and ploughing in hot haste the eternal and engulfing ocean.

In the conversations held between the passengers on the propriety of captain Truck's course, in fleeing from pursuit, Mr. Cooper introduces a considerable quantum of political balderdash, and compliments Mr. Dodge with its paternity. Now we are willing to wager a box

of segars with Mr. Cooper, that there is no man in America, particularly no American editor, who could utter sentiments so perfectly ridiculous, as those attributed to that unfortunate representative of our calling, brother Dodge! The common laborer of the land knows better, for he can read the *Almanac*, and knows his right hand from his left; and the educated mechanic of the free schools, would never, unless drunk, utter sentiments so false and foolish; and the more enlightened class are too well informed to commit the egregious errors that Mr. Cooper would maliciously have us believe appertain by virtue of their vocation to American editors. The reader of "*Homeward Bound*" will not be surprised at the severity of this language, which, if it be severe, is so because it is just, when he will reach that part of the work to which we refer.

A committee, at the ridiculous instigation of editor Dodge, is appointed to inquire into the position assumed by captain Truck, and they retire to deliberate upon the matters entrusted to their charge—and we leave them to their silly office, with feelings of not over warm admiration, for that genius, which is forced to resort to means so outrageous to common sense and common probability, to spin out his pages into a regular two-volume work, or for a purpose more malignant, to cast ridicule upon his literary brethren of the press. We would quote passages from the work, but that it would occupy too much space in a periodical not wholly of a review character, and deprive the readers of the *Messenger* of many of those effusions that from time to time ornament its pages, and throw a charm over the literature of the south.

The ships, for many days, continue their course across the Atlantic—the man-of-war, her *Britannic majesty's* ship, the *Foam*, hovering like an eagle by the side of the fleeing packet. In descriptions of the wild and grand ocean—the rushing waves—the foam tossing itself far over the decks—the tightened cordage, and the extended sails—and all the glorious excitement attendant on a ship, we hail Mr. Cooper as the most perfect and graphic of masters. No other writer of such matters can approach him in the activity that he imparts to these noble pictures. *Marryatt* is good at the coarse and the ludicrous, but he wants that courage of mind, that sublimity of purpose, that bears Mr. Cooper forth, when the thunder and the lightning are howling and flashing in the hurricane and tempest.

Day after day departs, and the captain of the *Montauk* steers onward without one token of submission, and the *Foam* follows greedy for its prey. But suddenly the *Foam* is lost sight of in a storm. We wish that we could here depart from our rule, and quote the account of that gathering tempest. The ship with her white canvass rides upon the sultry sea—blackness mingled with foam beneath, and clouds, thick and murky, gather above their heads. Suddenly, over the distant sea, is seen the wing of the wind, crushing the high waves—then is heard the ropes rattling like volleys of musketry, and in are all the sails, and with a plunge like a wounded barb, the vessel springs madly forth upon her fearful track. Our mind was filled with tremendous and beautiful images created by this wonderful describer—and when the *Foam* again is seen, a thrill of horror shook our very heart. Right in the wake of the *Montauk*, dashing with resistless speed,

she advances! Upon the crowding events of a second depends the fate of both crews. The sternest hold their breath, and captain Truck, with his gray hair streaming in the tempest, utters his orders. That voice of the veteran, familiar of storms, is heard above the roar of the elements, and once more the vessels steer apart! The scenes growing out of this "blow in the tropics," are, beyond comparison, the finest in the work; and we feel as if the same master hand that we so proudly recognized in the "Red Rover," was visible in the machinery of this stirring narrative.

During the long run that ensues, Mr. Cooper fills up the vacuum with dialogues; and how utterly does he fail in describing the high-toned, yet easy intercourse, that generally takes place between persons in an elevated sphere of life. His characters are caricatures of the originals, either stilted in the air, or grovelling in the dust; and even Eve is still unloved by the reader. To our imagination she seems a fine young woman, with an aquiline nose, muscular and spirited, standing amid a group of men, with politics or morals, national prejudices and governmental dogmas for her themes. There is no delicate play, no delightful badinage, to distinguish the beautiful daughter of fortune; but a haughtiness, which seems the only feeling *natural* to her, distinguishes this masculine heroine of the story. The atmosphere in which she moves and has her being, is unnatural and rigid, as if she kept her tenderness at home in an ice-house, and subject only to the mighty incantations of terror in fearful seasons of personal peril. She is the spoilt child of a doating father, to whom she imparts her ideas of liberty, law and government, in remuneration for his kindness. We refer our readers to pages 76, 78, and 79, in the first volume, and 225 and 243, in the second volume, for our justification and Mr. Cooper's censure.

Not to be able to sketch the glorious amplitude of woman's nature, sweet and beautiful, is not to be a poet. Of all the flowers that spring up for the enthusiasm of the novelist, none are so deserving of his care as that which God calls woman, and which man worships as angel. The deficiency of this power is the strongest proof of the uninspired mind, and we lament with great sincerity that our native author is subject to reproof in this important particular. To be sure there are some scenes in which Eve figures splendidly, and draws upon us for our warmest admiration, but it is the situation that produces the effect, and not Eve; for, were the humblest and most uninteresting waiting-maid placed as Eve is, with her rude parents, in the midst of shipwreck, our tears would flow freely for her vulgar griefs, sublimated for the moment into the grandeur of despair. We have, during our whole acquaintance, seen her artificial, haughty, and sometimes prudish, (that deadliest of all offences against modesty,) that we sympathize with her only when the terrible mingles with her fate, and bows her spirit down to agony and tears.

The plot of the story, which we have thought best to conceal from our readers, is as yet unrevealed. Two more forthcoming volumes are necessary to complete the catastrophe, and what that catastrophe will be can easily be seen, for it must result naturally from the events that have been already recorded. It is not for us to turn the sibylline leaves to the world, for then the

charm would be broken, and Mr. Cooper would little thank us for our officiousness. The plot, so far as we can see, is simple as a village story, filled up like an illuminated book of the fifteenth century, with brilliant capitals and gorgeous flourishes. The book is glorious in many parts, and dull oftener than we expected, though not oftener than we feared it would be, for Mr. Cooper has been estranged from the use of the delicate and imaginative pen, having of late so much worried both himself and a victimized public with political tracts, the effusions of his most untractable spleen.

Mr. Cooper has been called the Walter Scott of America. It could not have been, because their styles were similar, but because they were both master novelists of their country. Scott's delineations of women are magical beyond parallel, and his conversations from the lord and lady of the castle, to the gardener and the groom, seem as things that we have actually heard in some of the dim and indistinct periods of our lives. Cooper is a writer who serves the cause of courage, of hardships, of the wilderness, of the deep dell, and the stupendous steppes of the American prairies. He robes himself in a buffalo skin, and rifle in hand, he traverses the whole animal region, familiar with the beasts and birds, and fills our imaginations with ideas of bold enterprises and sturdy deeds. He is the very embodiment of mental fortitude, and he is only at home when he is in the voiceless solitudes of the lands or seas. In the latter, he steers his barque with unerring hand, even amid the spear-pointed breakers of the foaming beach. We recognize the hand of a Prospero, when clouds pall the heavens, and all the minute and general signs of tempest are upon the flashing face of the ocean. Then we yield to the tremendous powers of the natural painter, and he conjures up the giant billow, dark and white, like a huge warrior with his iron mail and snowy plume, rising in his stirrups amid a bloody fray. We hear the big voices of the winds, and when ploughing her way up over those magnificent waters, lo! the vessel, under reefed topsails, rushes in grandeur upon the scene.

How much romance there is attached to a ship!—and it was ever so. In ancient times Ulysses traversed, wife-searching, the limited seas of those times, in a high peaked barque; and a mysterious interest invests any fabric that tramps upon the earth, or ploughs the waters, as if the instincts of life were active within its vast machinery. People stop in crowds to gaze upon the thundering car, that swiftly passes before their vision, miracle as it is; but a ship, steering and turning, tacking, and fleeing up and down, straight forward and across, like a playful bird, without any visible cause why those huge sheets of canvass should so work, is indeed a thing of beauty and of wonder. Then can we be surprised, that genius has taken it in keeping, and poured forth its eloquence upon its journeyings? The sailor's life is full of incident, and his "yarns" are proverbial. Who will forget the "Rhyme of the Ancient Mariner" of Coleridge, dread tale of supernatural and hellish sublimity? It is the dreariest and vastest story of the sea that ever fell inspired from the pen; and it swept over us like a ghastly visitant from deeps unknown, pale realms of awe and terror, and has its monument of praise amid our frightened dispositions. Mr. Cooper is an American writer by feeling, and we

would intreat him never again to leave, as a mean of inspiration, the land of his birth. We know at once and always, that he is at his forte in describing the rough seaman, the squatter of the west, the hunter, and the Indian. All the speeches of those persons are natural, because they suit the bold and rough mind that gives them life and muscle; but when he attempts the description of the finished gentleman, or the sensitive lady, he gives us pedantry for learning, and pride for refinement. For the present we take our farewell of Mr. Cooper.

ANOTHER REVIEW OF "HOMEWARD BOUND."

[After the preceding article was in type, we received the following review on the same work from another hand. Although it is a somewhat anomalous circumstance to publish two reviews of the same work, from different pens, in the same periodical, yet it may not be altogether without its advantages. It exhibits the different lights in which the same subject presents itself to different minds. This very diversity too is calculated to arouse the attention of the reader himself to the merits of the work, and to set them off better by the force of comparison. It is like two portraits of the same individual, with critical remarks attached. The variety of lights, in which it is exhibited, brings out in more striking colors the features of the original.

It is unnecessary for us to call the reader's attention to the merits of the following review. It will best speak for itself. But we may be excused for saying, that if we had not been deeply impressed with its beauty and force, we should never have ventured to introduce it to our readers, particularly after receiving the very ingenious and striking companion-piece which we now send along with it.]—*Ed. So. Lit. Mess.*

"To young writers, and to general readers, who are always young in literature, a reviewer may offer an important instruction when he commences his article, with condensing the chief rules of composition relating to the work he examines." This passage, taken from the preface to D'Israeli's "Miscellanies," though already garbled, needs further modification, before we can admit it in explanation of our plan for the present article. We propose to throw together, as a preface, a few loose observations upon some of the more obvious characteristics of good novel writing, without, however, pretending to give the chief rules of the art, or to bestow particular care upon method. Our main object is, fully to explain some of the opinions which, in the sequel, may be given of the work before us, which, in fact, has suggested most of the following preparatory remarks. Examples, where necessary to enforce the rules laid down, will be drawn chiefly from this work, and, indeed, our subsequent more particular notice of it will be, in great part, merely an extended illustration and application of these rules.

It is a prevailing notion, but as seems to us a very erroneous one, that a writer of fiction should follow nature, in all respects as closely as possible, in giving shape to the creations of his fancy. To most persons this doctrine, from long acquiescence in its authority, appears so obviously correct, that they do not care to examine it or seek for its verification. Yet we think that a few words may suffice to show its error, and to suggest a modification which will fix the true rule.

Nature must certainly be copied and closely copied

by every one pretending to success in the department of fiction. More than this, whenever she is copied at all, the draught should be as near like the original as possible, and must be very like in order to give satisfaction to the beholder. Therefore, the more acute observer of nature, other qualifications being equal, will be the better novelist. But in some respects, nature certainly ought not to be followed as a guide. All the materials of fiction must be drawn from her vast storehouse; but in the arrangement of these materials, the writer is not only allowed considerable license, but the *lex operis* imposes on him certain deviations from his pattern. The first part of our rule seems to admit of no exception. A novel cannot deeply interest the reader, unless its substance be taken from something existing without the author's fancy. It is true, that many stories, founded on what are called *supernatural* appearances and existences, are highly exciting; but, though called *supernatural*, these things have a being in nature—an ideal being in the superstitious belief or impressions of mankind. We here call *natural*, that, whether real or imaginary, with which the reader is familiar from observation, feeling or belief; and *unnatural*, that which exists nowhere but in the fancy of the writer.

The second part of the rule we shall illustrate more at large, and attempt to show, that, in the arrangement of a novelist's materials, it is necessary that he should often depart from nature, by mentioning some of the principal points of deviation; premising, however, that every such departure should be skilfully concealed—that is, that the joinings between the natural and unnatural should be so close as to be imperceptible to ordinary vision.

The deviations of which we speak are necessary to give completeness and boldness to fiction. Perhaps the most important of these lies in the selection and consequent concentration of material. The events of real life are always mingled, interesting and uninteresting, important and trifling, in the same train; and, on this account, produce little excitement in a mere spectator, and often as little even in the busy actors themselves. The thread of every story is embarrassed and tangled with a thousand different threads, crossing it in various directions, running with it in part, or hanging from it in loops and ends. These give it an appearance of complication, which forbids any attempt to unravel the maze; and though small portions of the plot may here and there be distinctly visible, the connection of the whole is not easily and at once discerned. Now the novelist must strip his tale of all uninteresting and unimportant appendages. In other words, the scenes which he describes should be made up of the most expressive pictures; the lives which he records should have no common-place incidents. And, if he ever leaves the direct path of his main narrative, he should take care not to wander so far as to make the return difficult, or to confuse those trusting to his guidance, in regard to its true course and bearings. And as with the events, so also is it with the personages of real life. The great mass of men have little interesting in their characters. It is only here and there that we see one distinguished from the common herd, by singular excellencies, great eccentricity, or unbounded wickedness; and we never meet with a number of strongly

marked characters, sufficient to people the scenes of a well wrought fiction, all thrown together, to contribute by their words and actions to the conduct of a symmetrical plot. Further, no man's true disposition or mental qualities appear at first sight, and in all that he says and does. A lifetime scarce serves fully to develop them. In fact, human nature is so complex, in each instance made up of so many different and even conflicting elements, that every day spent in the company of our most intimate companions must teach us something new in regard to their characters. All persons, too, say and do much in every situation that contributes nothing to our knowledge of them. But in fiction must be congregated, and put in harmonious action, a large number of highly interesting and strongly marked personages. No word or deed, not serving to illustrate some one's peculiarities, or to carry on the thread of the story, should be suffered to clog its course. Character must be so concentrated, that the reader may at once comprehend the whole, and experience, and, therefore, the most interesting characters are those in which some one or a very few striking peculiarities are personified. Such an one the reader is able perfectly and at once to understand, at the same time that he feels a great degree of self-satisfaction, with what he is apt to consider his own ready discernment, displayed in this act of comprehension.

When a person is acted upon by strong passions, especially when they operate to oppress and weigh down the spirit, it is unnatural for the feelings to be expressed in language. The stronger emotions of the soul, either because the inadequacy of words is felt, or because in moments of extreme agitation our relations with surrounding humanity are forgotten, or our sense is incoherent and confused, are generally lost in silence, or betrayed only by inarticulate or vague exclamations, or by mere bodily action—such as the working of the countenance. But in the drama, where the whole plot is developed in conversation, it is necessary so far to deviate from nature, as to make the deepest feelings and emotions find expression in language exactly significant and descriptive; and this is the most difficult part of the dramatist's task. The same departure from nature is also frequently required in the novel. For, conversation though not its only, is its most effective resource. An exhibition of mere dumb feeling will not always be enough: a deeper interest may be given to the narrative by dramatic passages—especially to the delineation of character.

Every fiction should have a moral, not formally set forth at the end, as is customary in the case of fables, yet, in common, most fully developed and illustrated in the conclusion of the narrative. Vice ought usually to be punished and virtue rewarded. The principal actors in the varied scenes over which we have looked, should meet with the fate, which, in a spirit of justice, we have anticipated. Now, in this world, rewards and punishments are not, to our view, thus impartially apportioned. On this undisputed fact has been founded one argument in favor of a future state of suffering. But it is evident that the novel reader cannot be re-

ferred to that future state, in order that his preconceived notions of justice should be there vindicated. In this case, therefore, a deviation from nature is generally necessary. But we need not give any further examples to enforce the rule laid down. If the few mentioned were the only ones which could be adduced, it would seem established in the fullest sense of its terms.

The style of novels should be sprightly and piquant, racy, nervous, and easy; sometimes imitating the grave stateliness of history, but much oftener the light flow of the drama. It admits of much varied ornament. The most fanciful images and flowers of poetry may, with good effect, be profusely shed over its plainer frame-work. It is in the dramatic or conversational parts that the author's talent is most severely tested, and most frequently fails. Here are to be avoided the opposite faults of too close an imitation of the colloquial freedom and vulgarity of real life, and the measured, pompous style of Johnsonian phraseology. Mr. Cooper most frequently sins in the latter respect, by making his characters of every degree speak too much after the fashion of books; but less, perhaps, in the volumes before us, than in some of his previous fictions. The novelist must not suppose,

*"Uti nihil intersit, Davusque loquatur, et aedax
Pythias, emuncto lucrata Simone talentum,
An custos fabulæque del Silenus alumni."*

But it is in bad taste to make every menial a sworn enemy of all grammatical rules, and every well educated man, a pompous declaimer. Indeed in the former case as might have been mentioned under the last head, nature should usually be refined upon: her pictures are frequently too coarse and indelicate for eyes polite. But here greater license may be taken, when it is part of an author's plan, to represent the true character and manners of any particular class. And, indeed, the style and tone of conversation must always depend much upon the object proposed—whether the writer aims merely at making his story interesting, or wishes also to make it a vehicle for religious, moral, literary, or political discussion. Mr. Cooper tells us that he intends, in the sequel, to attempt a delineation of American society, and the execution of this plan he has commenced in the work before us. Of course such a subject properly gives rise to much grave and oratorical conversation.

Those tales are the most interesting, in which there is no attempt to throw a deep mystery over the issue of every event, and the character of each person introduced—to confound the reader by great surprises—results contradicting all his expectations. It is much better that he should anticipate something of the sequel, if the disclosure be made artfully, so that he may attribute much to his own superior discernment. We have already hinted at the advantage of keeping readers in a good humor with themselves. We believe there is nothing which contributes more to the interest which they take in a work. When a striking character is introduced, if a person perusing the sketch has ever had any, even the most confused, crude, imperfect conception of one at all similar, this conception is immediately brought into vivid remembrance, and, though reflecting its light principally from the other, appears often as an original from which that has been copied.

At least, the reader feels as if his observations had been as acute as those of the author. And this coincidence of conception is almost certain to take place, whenever the picture presented is true, in its substance, to nature. If the reader can almost imagine that he himself is tracing out the story; and, if, while one event after another is slowly unfolded, he seems, ever and anon, to catch a glimpse of what yet remains hidden to persons of sight less quick and minds more dull of comprehension, he takes a double interest in his occupation.

A novel would seem to depend for its excellence much less upon the plot than is usually imagined. A ready invention is often spoken of as the most important faculty of a writer of fiction. But we think the shading has more to do with the general effect than the outline; and, therefore, that great skill in mixing and laying on the colors is preferable to proficiency in the art of drawing; though the latter is by no means of small importance. A plot may be so meager that nothing will supply the deficiency; and that every effort to make up for it by a profusion of incident only serves to render it the more apparent. But meagerness of plot is not one of the most common faults of novel writers. More fail in the embellishment than in the frame-work of their fictions. Incompleteness of outline is a still rarer defect; for most authors form a general sketch of the whole at first, to be afterwards filled up, and extended to the dimensions of two or three volumes. A tale may be finished and complete in itself and yet be only part of a continuous narrative—continuous as regards some important personage therein, or in respect of the whole plot. Of the former kind are three of Cooper's previous fictions, in all which appears the same character—the most interesting one which they exhibit—though in each under a different guise: first, as *Leatherstocking*; then, as *Hawkeye*; and lastly, as the *Trapper*. Tales of the second kind cannot well be as complete in themselves as those just mentioned; but still, like *Ernest Maltravers*, may conclude with a disposition of the various actors, which might be satisfactory if no sequel were promised, and, which at any rate, makes a six months' interval between the two parts an easily tolerable state of probation.

It is scarcely possible, and not at all necessary, that a continual and deeply exciting interest should be kept up throughout every part of a novel: indeed, the reader's feelings will hardly bear such prolonged tension: satiety and exhaustion are apt to be the consequence. It has been remarked of a late English work of fiction—"Tom Cringle's Log"—that, though on its original publication, by monthly chapters, in the pages of a magazine, it delighted all its readers, after being compacted into the form of a book, the profusion of exciting interest which it contained, highly entertaining when doled out in small portions, became wearisome and palled on the appetite. The author may sometimes sleep in order that his readers should enjoy occasional repose.

"—operi in longo fas est obrepere somnum,"

said Horace: perhaps he might better have said with our own poet,

"A prudent chief not always does display
His powers in equal ranks and fair array;

But with the occasion and the place comply;
Conceal his force, nay, sometimes seem to fly.
Those oft are stratagems which errors seem,
Nor is it Homer nods, but we that dream."

It seems necessary, on introducing a new character, to give some general idea of the leading peculiarities personified, in order to direct and concentrate attention; but, as much as possible, the reader should be left to form his own notion of each one, from the subsequent developments of words and actions. A single well drawn scene will impress upon him the characters of the various actors, therein, more forcibly than the most labored description. We think that Mr. Cooper evinces great tact in this particular. With little preliminary form, all his personages are placed before us, to speak and act for themselves. The reader's idea of them is perhaps the better for not being in every respect precise. His comprehension should be only so exact, that each new development should appear but to strengthen first impressions, having, at the same time, a certain freshness and novelty. Mere bodily attractions or accomplishments, however well described, cannot make a character interesting. Even the highest order of female beauty, exciting as in the reality it may be, cannot of itself, in fiction, though never so glowingly depicted, awaken those feelings akin to the warmest love, which novel-readers often experience. Mental and moral qualifications are those which strike most forcibly, and they always seem to draw after them, at least, a vague notion of bodily appearance. We always form an idea of the person and carriage of those by whose endowments of mind and heart, however exhibited, we have been interested. None can read Bulwer's highly wrought delineation of the brilliant genius and glowing soul of *Florence Lascelles*—her commanding intellect and sparkling wit; her proud self-confidence, yet complete devotion—without robing these spiritual attributes in the fairest drapery of earth, to whose bright tints and graceful folds the novelist's description can add scarce any line of beauty, or delicate richness of hue. A character, then, which is to hold an important place in the story, does not need much formal explanation, but should be developed in action; and, of course, one, in which it is not intended that we should feel any particular interest, needs no description at all. This leads us to remark, that, where a character is introduced merely *en passant*, and takes but a momentary part in the scene, it should not be made interesting to the reader, lest a feeling of disappointment follow its disappearance. Such a disappointment we feel at the speedy fate of Brooks, the gallant young sailor, who during the fight with the Arabs on the coast of Africa, greets Paul Powis, the hero of Cooper's story, with the recognition of a former acquaintance in sea service, and then is very coolly despatched, and, afterwards, not even remembered in the recapitulation of the killed and wounded.

A character, after being once so presented to the reader, that he seems to have gotten a general comprehension of its peculiarities, ought not to change in any important particular, except where, at first, a mask has been worn to hide the true features. Of such a fault also we have an example in the work before us. John Effingham—the cold, sarcastic, skeptical wit—becomes, beside the death-bed of Mr. Monday, a humane and attentive nurse—a tender, warm-hearted and benevo-

lent friend. The change undoubtedly makes him appear more amiable; but it mystifies and discourages the reader, who had thought his character perfectly well understood.

Thus ends our *preface*, and now we come to the *introduction*—of Mr. Cooper to our readers; for we are as fond of formal introductions as Captain Truck himself. When we first heard that 'Homeward-Bound—A Tale of the Sea,' was in press, we hailed with delight the novelist's return to his own good ship and ancient cruising ground; for, with many others, we had lamented his late rover life, and thought that he was gaining neither honor nor gold thereby. And when the book made its appearance, in its plain, rather slovenly American dress, eagerly did we seek after it, and, with the most agreeable anticipations, sit down to the perusal of it, endeavoring to forget or overlook the last few years, and to connect together those longer past, the present and the future, in a continuous chain of happy recollections, agreeable sensations, and brightening prospects. If we rose disappointed from the task, commenced in such a pleasant frame of mind, it was not because the book seemed entirely devoid of merit; and if, in the following pages, we blame more than we praise, as an apology we would say,

'Indigner quandoque bonus dormitat Homerus.'

And here should it in justice be acknowledged, that the story has interested us much, and that we look, with impatience for the sequel; not however with such high-wrought expectation as welcomed the announcement of these volumes.

To begin at the beginning, we must remark that Mr. Cooper's preface seems to us one of the most unfortunate specimens of preface-writing, which we remember ever to have fallen upon. When we say that it is a childish attempt at mock *naïveté*, we express in terms hardly strong enough our own impression. With this brief notice of it, however, we pass to the story itself, of which, in order that our observations may be the better understood, we shall give a brief outline.

The scene is laid principally on the ocean, and is dated two years back. Mr. Edward Effingham, a widower, with his lovely daughter, Eve, and his cousin, John Effingham, set sail from London, in the Montauk packet, of New York, Captain Truck. Among the passengers they meet with two gentlemen, Mr. Blunt and Mr. Sharp, whom they recognise as former acquaintances, having met them in their rambles over the continent, both of them now travelling under false names; one from mere caprice, the other perhaps for a more solid reason. Besides these are introduced to the reader, Sir George Templemore, a silly English baronet, delighting in a plenitude of costly clothing, fine jewelry, and splendid "notions"—particularly in a set of razors, a dressing case, and thirty-six pair of pantaloons; Mr. Dodge, a Yankee newspaper editor, who has paid a flying visit of six months to Europe, has "seen all he wants to see," and is returning to resume his station beside the forms of "The Dodgetown Active Enquirer," and to publish voluminous notes of foreign travel; and Mr. Monday, an itinerant mercantile agent. While the packet is getting under-weight, a police officer comes on board with a warrant for a steerage passenger named Davis, but, not knowing the face of his intended prison-

er, cannot point him out, and, at last, after being carried some distance into the channel, hoping that a boat which pursues, and has on board a person who can identify the man, may overtake the ship, is obliged to leave her, much to the joy of all the passengers, who have become greatly interested in Davis and his young wife, though not before the chase is apparently taken up by the *Foam*, a British corvette, cruising on the coast. These introductory scenes are of a highly interesting and stirring nature, are well depicted, and, besides, give an admirable opportunity, which the author skilfully improves, to introduce the various characters above noticed to the reader.

The *Foam* continues the pursuit day after day, until it can be no longer doubtful that her object is to overhaul the packet. Captain Truck, fearful that some of his sailors may have been guilty of smuggling tobacco, and thus have made the ship liable to seizure, is fertile in expedients for escape; but every morning's dawn reveals the corvette still in sight and in chase, despite the manœuvres which the darkness has covered, until the packet is far out of her course, and her captain contemplates running to the Cape de Verde islands to gain a neutral ground. A dreadful gale ensues; both vessels, after lying-to as long as possible, are obliged to scud before the wind. The *Foam* gains rapidly on her chase; at the morning dawn she appears in the dim light careering on close in the Montauk's wake; then they are beam and beam, and for one fearful moment seem about to come into collision; but "affrighted," they recede; the corvette bounds past, driven before the gale, and soon disappears from the horizon, Captain Truck benevolently conjecturing that she has found a rocky bed on the shores of Africa. The Montauk afterwards is dismasted, and, another vessel bound to New York falling in with her, all the passengers, except the *dramatis personæ* of the novel, who, for Mr. Cooper's convenience, prefer to remain, are transferred to the latter. Jury masts are then erected, but soon "land, ho!" is the cry, and they find themselves near the African coast. At a little distance, high up on the sand, lies a Danish vessel. They visit her, and find her to have been rifled by the Arabs; and not far off is discovered the body of one of the crew murdered by these savages. Captain Truck determines to possess himself of the Dane's spars; he manages to get his vessel safely moored within the reefs lining the coast; and leaving the Effinghams, with Mr. Sharp and Mr. Blunt, on board, takes all the rest, both seamen and passengers, to the wreck, which is some leagues off, concealed from view by an intervening point of land. The spars, after a bloodless encounter with the Arabs, are unshipped and formed into a raft; and, on the second night, the successful party moor near the point which hides the Montauk from sight. In the meantime the ship is visited by the barbarians; the passengers, under the guidance of Mr. Blunt, who proves an expert seaman, escape in the long-boat, after many perils, and, on the dawn of the next morning, fall in with Captain Truck and his party. After a desperate struggle, and the loss of several lievs, the Montauk is rescued, her new masts are stepped, and she is gotten again to sea. During these adventures, Mr. Blunt becomes Paul Powis, and Mr. Sharp, Sir George Templemore—the other passenger of that name proving but a pseudo-baronet. Only

the reader, however, is acquainted with these changes, the Effinghams had known the truth from the first, and the others remain in ignorance. Soon after the escape from the Araba, Mr. Monday dies on board, from wounds received in the fight. When at the point of death he confides to Mr. John Effingham and Mr. Blunt some sealed papers, not to be opened until after his decease.

The remainder of the voyage to New York is prosperous; but just off Sandy Hook appears the Foam! She recognizes her chase, and her commander, Captain Ducie, asks permission to come on board the latter, where he explains the object of his pursuit—a forger, who has escaped from England with a large sum of government money. The *soi-disant* baronet turns out to be the criminal, and is delivered up. Paul Powis also returns with Captain Ducie, under circumstances apparently disagreeable, but not explained to the other passengers, or to the reader. In his hurry, he carries off with him the sealed papers left by Mr. Monday, as before mentioned. The Effinghams, Sir George Templemore, and Mr. Dodge disembark safely on American ground. Here ends the story for the present; but a sequel is promised. Mr. Cooper says in his preface,

"In one respect, this book is a parallel to Franklin's well-known apologue of the hatter and his sign. It was commenced with a sole view to exhibit the present state of society in the United States, through the agency, in part, of a set of characters with different peculiarities, who had freshly arrived from Europe, and to whom the distinctive features of the country would be apt to present themselves with greater force, than to those who had never lived beyond the influence of the things portrayed. By the original plan, the work was to open at the threshold of the country, or with the arrival of the travellers at Sandy Hook, from which point the tale was to have been carried regularly forward to its conclusion. But a consultation with others has left little more of this plan than the hatter's friends left of his sign. As a vessel was introduced in the first chapter, the cry was for "more ship," until the work had become "all ship;" it actually closing at, or near, the spot where it was originally intended it should commence. Owing to this diversion from the author's design—a design that lay at the bottom of all his projects—a necessity has been created of running the tale through two separate works, or of making a hurried and insufficient conclusion. The former scheme has, consequently, been adopted."

Mr. Cooper's style is as good in *Homeward-Bound* as in any of his previous novels—better than in some of them. It is easy and vivacious, spirited and nervous. We have already commended, in general terms, the conversational parts, but in narrative certainly lies his fort. To the plot of this story we take more exception. The two faults above-mentioned as uncommon ones—incompleteness and meagerness of plot—are here exemplified. The work appears to us like the few first chapters of a novel spun out to the size of two volumes. It might almost be supposed that the author, finding his introduction growing too long, had determined, instead of curtailing it, to lengthen it out, by insertions, prefixes and suffixes, to the dimensions necessary for a separate existence. A story founded on scenes of still life would not perhaps require such fullness of plot as one like the present, in which more stirring events are narrated. Mr. Cooper tells us, in

the passage extracted from his preface, that a small part of his original purpose has grown up into an independent plan. It might have been expected that a plan thus originated would lack completeness and copiousness. Then the conclusion is quite unsatisfactory. The cadence, if we may so call it, in the story, is not greater than might properly finish a chapter midway in a tale.

In the process of stretching out his scanty materials to the necessary limits, the author has fallen into the error of introducing entirely too much of the technical operations of seamanship into his tale. He must have intended it principally for landmen, and yet has swelled the narrative by a minute description, sometimes, indeed, expressly suited to the common reader, but oftener incomprehensible excepting by sailors, of every movement of the *Montauk*. We have an impression, though not certain, that Mr. Cooper has before been accused of pretending to too much nautical lore, and have even heard his authority, on, at least, one point of seamanship introduced into the present volume, seriously questioned. Perhaps he has had in view such a charge, and has sought to vindicate his character as an "old salt." But we confess our ignorance of all things ship-shape, or ship-pertaining, beyond some few christian names of masts, sails and yards. There is, however, a something in marine language very expressive, though one knows not exactly what it means. We have, at times, watched the novelist's manoeuvres with his ship, in perfect ignorance of what was going on, yet with intense interest, sure that every movement was fast hastening some important result; or, perhaps, affected sympathetically, as one who smiles when another laughs in his presence, without knowing the cause of his mirth. There is a nervous brevity in sea-phrases, which typifies prompt and energetic action; in short, a something, which, like pantomime, affords great play for the imagination.

Captain Truck is an admirable character, and a character of exactly that sort which Cooper can best portray. All his novels illustrate this remark. His fort lies not in the description of refined and polished life. Courts and drawing rooms are not his proper field. A rough-bewn son of nature, whether wandering through trackless wilds, a trapper or a scout, or standing on a ship's deck and raising his voice above the tempest, he depicts as none else with whom we are acquainted. Even his well-dressed personages appear to most advantage, when thrown into circumstances calling into action their more rude and hardy talents. Paul Powis is at no time so interesting as when commander of the ship's launch, either for escape or battle. He handles the wheel, or a swivel, or the sailor's lingo, much more effectively than the polite parts of speech. As evidence of the justice of these remarks, it will be noticed that almost every character of the story, not having some rugged peculiarities to support it, falls into comparative inanity. This is particularly observable in regard to the females introduced: or we should rather use the singular, as Eve is the only prominent female character. We are told that she is beautiful, lovely, and accomplished. It is sought to invest her with varied charms of mind, of person and of dress; but the reader is interested in her chiefly—perhaps solely—as beloved by, and loving Paul Powis.

Mr. Dodge is certainly a very amusing, though a very unfair specimen of Yankee newspaper editors and tourists. But his character is overdrawn, at least for

the American reader; Englishmen may look at it with more allowance. His mental and moral peculiarities, however, are of a coarse, rough kind; as strongly marked and salient as those of Captain Truck, though so different in nature. The two cousins, Edward and John Effingham, excite little interest. The former, though a man of "singularly correct judgment," is rather womanish, and takes little active part even in the quiet scenes of the story. Mr. Sharp, who has nothing to recommend him, but his gentility, though evidently intended for a pleasing example of a polished gentleman, leaves rather a disagreeable impression on the reader's mind, from the want of force in the delineation. Mr. Monday is quite a negative sort of character; and, if the sealed papers, which he leaves behind, are to disclose any thing very important to the narrative, we can only say that this part of the plot seems awkwardly introduced. If they contain nothing important, it bears an unmeaning aspect. At any rate, a mystery is thrown over the whole affair, which might better have been cleared up, at least so far, that the connection, if any there be, between Mr. Monday and the other characters, might have begun to appear. But perhaps we go beyond our depth in criticising what may depend on the unpublished sequel for its true bearing.

We shall not meddle with Mr. Cooper's political opinions, and but little with his notions of American society—our principal object being, to examine into the literary merits of his work. We cannot, however, pass in silence one prominent feature of the author's character, which is displayed on almost every page—his want of patriotic feeling. We before knew that he often assumed a querulous tone, when dwelling on the requital which his own services to the nation have met with; but did not imagine that his soul had become so completely warped, by brooding over supposed wrongs. Perhaps Mr. Cooper's residence abroad has thus alienated his heart; or, as is more likely, has led him into a whimsical affectation of what he calls "cosmopolitanism." He would doubtless say, in answer to a charge of his wanting nationality of feeling, that a person may be patriotic, and yet see clearly all the faults of his countrymen; that blindness to these arises from illiberal prejudice. Yes, the true patriot, in heart as well as principle, may see faults, but not faults only or chiefly; and he will naturally love to dwell on his country's honor rather than her reproach. He will not exaggerate her weak points, or expose them wantonly to the ridicule of foreigners, who gloat over every ludicrous representation of American character. In fact, no man of truly warm, ardent patriotism can free himself entirely from prejudice in favor of his own land. All varieties of the emotion of love produce a degree of blindness to the loved object's imperfections. But there is something more than love in true patriotism. There is in it a pride, mingled with affection, which identifies the citizen, in his own feelings, with the nation; which makes him bear, as a personal reproach, every stain upon his country's honor. "Cosmopolitanism" is as inconsistent with patriotism, as omnipresence is with finite being. Mr. Cooper seems anxious to repel the least suspicion of prejudice in favor of the United States, and he does it by exhibiting violent prejudices, thinly clad indeed in a mock garb of impartiality, against his countrymen. If the book had been written purposely to tickle the depraved appetite of those Englishmen, who, the last to acknowledge any American book worth reading, are the first to lavish cen-

surms upon every printed defamation of American character, coming from this side the water, and to deem oracular every prediction unfavorable to American institutions, it could hardly have displayed more illiberal feelings toward that character and those institutions. Mr. Dodge is not only a caricature, but a gross libel on the newspaper editors of our country; not because there are none of that profession equally despicable, but because he is held up as a fair representative of the whole class, and the author's declared object is the correct delineation of the state of American society.

We have no doubt that foreign travel rightly improved, may be of great advantage to the traveller in many respects, and not least in polishing and refining his manners. We are also free to confess, that we think Americans, generally, rather deficient in point of good manners. If, as Lord Chesterfield asserts, courts are the only places where the laws of social etiquette can be successfully studied, then may our countrymen never improve in this science. But we think otherwise. The general rules of good-breeding are all founded on knowledge of the world and of human nature; this knowledge may be acquired under any one kind of institutions as well as under another. Then practice must fix these rules in the memory and the habit; and surely we have enough of good society in the United States to afford practice in the forms of politeness. True we have in force among us fewer of the mere conventional laws of good-manners, than they have in the old nations of Europe; but he that observes the general rules before mentioned, which are of universal authority, and those arbitrary laws which the fashion of his own country has introduced, is a well-bred man; and if such an one travels in a foreign land, he seldom fails to discover and obey the peculiar *legem loci*. The difficulty with us is not that our institutions are inconsistent with good-manners, or even unfriendly to them, though, certainly, monarchical and aristocratic establishments are more favorable to them than ours. But good-breeding, for reasons which we need not here particularize, is not sufficiently prized by the great mass of our countrymen, and, therefore, is not made such an essential part of education among us, as with the more wealthy and luxurious nations of Europe. But to assert that there is no such thing as a well-bred American, unless where the manners have been formed by education, residence, or travel, abroad, as Mr. Cooper virtually asserts, is to caricature the state of society among us very broadly.

During his sojourn in Europe our author had several interviews with Sir Walter Scott; and, in his "Gleanings," has given an ample account of one of these meetings, which Scott thus mentions in his diary:—"To-day" (we quote from memory) "met Mr. Cooper the American novelist. He has the manners, or rather want of manners, common to his countrymen." This passage has, no doubt, inflicted a sore wound on Mr. Cooper's pride; and it is said, though we can hardly credit the story—it has not, however, to our knowledge, been contradicted—that he asserts openly that *Scott died a drunkard!* At any rate, he seems to labor hard in the work before us, to disprove Sir Walter's accusation, by demonstrating his intimate acquaintance with the science of manners. His countrymen he leaves to vindicate their own honor, and, in fact, adds his voice in their condemnation, but would prove himself a paragon of politeness. How he supports this character we will not pretend to say, for fear of expo-

sing our American ignorance; but certainly we were "taken aback"—to use what we believe is a well-accredited sea-phrase—when Paul Powis, on parting with Eve Effingham and her father, whose lives he had saved on the coast of Africa, by his bravery and skill, *politely* remarked,

"Chance has several times thrown me into your society, Mr. Effingham—Miss Effingham—and, should the same good fortune ever again occur, I hope I may be permitted to address you at once as an old acquaintance."

Probably Mr. Cooper had found in his well-thumbed copy of the "Laws of Etiquette," with which he is, doubtless, as familiar as Captain Truck with his favorite author, Vattel, that passing acquaintances, formed at places of public resort, and in journeying by sea and land are not to be renewed, as of course, at after meetings!

Mr. Cooper is soon to give us the sequel of his story, in which he will attempt a complete delineation of American society. We predict that this attempt will prove a signal failure. His cosmopolitanism, or so-called freedom from prejudice, will be greatly in the way of a fair representation of our national characteristics. Besides, as we have before remarked, his fort does not lie in the description of refined and polished life:—now we think that there is enough refinement and polish in the United States, to put him at fault in the endeavor to personify them in a fictitious character. We predict that he will fail; yet with all our hearts—for his country's honor, his own reputation, and our entertainment—wish him, even at the expense of the prophet's disgrace, the most abundant success.

A TALE OF THE HUGUENOTS,

OR, THE MEMOIRS OF A FRENCH REFUGEE FAMILY,

Translated and compiled from the original manuscripts of James Fontaine, by one of his descendants. John S. Taylor: New York. 1838.

An entertaining little story, plainly told, of one of the most interesting periods in European history. The *naïveté* with which Mr. Fontaine, in his old age, sits down to entertain his Huguenot children with a family tale—the simple manner in which he relates the stirring incidents and hair-breadth escapes of his adventurous life—carries the mind irresistibly back to the winter evening tales of childhood, and forcibly reminds us of the absorbing interest with which we used to devour the legends of the nursery.

Though it purports to be the tale of a family, the work before us is the story of thousands. Varying the detail, with slight alterations, many, besides his two thousand descendants, may read their family history in the auto-biography of Mr. Fontaine. The persecutions and oppressions which drove him from his *belle France*, drove our ancestors to the rock of Plymouth, and peopled the wilds of a new world with the champions of civil and religious liberty. The protestants of Germany, the Huguenots of France, with the dissenters and congregationalists of England and Scotland, fled from their *father-land*, to seek a place in an unexplored wilderness, where they might worship God, according to conscience and to reason.

The early protestants were *dragooned* from place to place in Catholic Europe, and hunted down like beasts

of the forest. Steadfast in their faith, they considered persecution a privilege; torture, beatitude; and martyrdom, glory; with spirits which oppression could not crush, nor cruelty tame, they had learned in the school of adversity, the worth of that freedom they could not enjoy. They it was who brought to the western hemisphere the germ of liberty, out of which the independence of these United States was unfolded to the world.

Though history proper makes us acquainted with the grand features and general outline of those times, by revealing to us the persecutions and sufferings, and heroism of the noted few, we cannot catch from her formal manner, the spirit of the times. It is such works as the present, that complete the picture. Mr. Fontaine takes us familiarly by the hand, leads us to his home, points us to the ruins of his church, which bigotry had razed, and where persecution forbade him to minister. He conducts us thence with his neighbors to secret worship in the wood. And entering into their feelings, we follow him and them to prison, where we witness the sufferings, and are made fully acquainted with the condition of a Huguenot of the 17th century.

Mr. Fontaine commences the annals of his family from his great grandfather, John de la Fontaine, who bore a commission in "Les ordonnances du Roy," in the household of Francis I. He conducted himself so honorably and uprightly, that even after his father and himself had embraced protestantism at its first preaching in 1535, he remained in his office, and continued in it during the reigns of Henry II, Francis II, and until the second year of Charles IX.

At the edict of Pacification, called the January Edict, granted in 1562, the protestants were hailed into false security, and induced to lay down their arms. John de la Fontaine trusting to the immunities guaranteed to them, deemed himself secure without the protection afforded by his office, and threw up his commission. But, continues our biographer, "Some of the sworn enemies of God and his gospel, who had long watched John de la Fontaine, and conceived a deep hatred against him, thought the time had now arrived when they might safely put him out of the way; and such a man being got rid of, it would be comparatively easy to disperse the rest of the congregation to which he belonged.

"It was in the year 1563 that some of these ruffians were despatched from the city of Le Mans in search of him; and in the night time, when he least expected such a fate, he was dragged out of doors, and his throat cut; his wife, within a few weeks of her confinement, had followed him, hoping by her entreaties, to save his life; but she shared the same fate.

"James de la Fontaine, my grandfather, then thirteen or fourteen years old, with Abraham, two years his junior, and another brother still younger, fled from the bloody scene, full of horror and consternation, without a guide save the providence of God, and no aim but to get as far as possible from the barbarians, who had in one moment deprived them of both father and mother. They did not stop until they reached Rochelle, then a very safe place for protestants, containing as it did, within its walls, many faithful servants of the living God. These poor lads were actually begging their bread when they arrived there, and were without any recommendation save their appearance. A charitable

shoemaker, who feared God, and was in easy circumstances, received James into his house, and into his affections also, and taught him his trade. They all three lived poorly enough, until James reached manhood; he then entered upon commercial pursuits, and his career afterwards was comparatively prosperous. In the year 1603, he married, and had two daughters and one son, (James,) my father. He married again, but had no addition to his family; and better would it have been for him had he remained a widower, for his last wife attempted to poison him; and though unsuccessful, the affair became too notorious to be hushed up. She was carried to prison, tried, and condemned to death. It so happened that Henry IV was then at Rochelle, and application was made to him for pardon; he said before he granted it, he must see the husband she had been so anxious to get rid of. When my grandfather appeared before him, he cried out, 'Let her be hanged, let her be hanged, *ventre saint gris!* he is the handsomest man in my kingdom.' I have seen his picture, and it certainly did represent him as a handsome man. * * *

"I now proceed to my own father, who at an early age discovered great aptitude for study, and a very serious turn of mind. I was the youngest child of my parents, and have but little personal recollection of your grandfather, being only eight years old when he died. He was a man of fine figure, clear complexion, pure red and white, and of so dignified a deportment, that he commanded the respect of all with whom he came in contact. He absented himself on festive occasions, but never failed to visit every family in his flock twice a year. The sick and afflicted were visited as soon as their affliction was made known to him. When it was understood that he was praying with the sick, crowds would flock to hear him, filling the house—for you must know that in that district all were protestants, save four or five families. He was most zealous and affectionate, and employed all his knowledge, his talents, and his studies in the service of God. He had great learning, quick and ready wit, clear and sonorous voice, natural and agreeable action, and he always made use of the most chaste and elegant language; and genuine humility, crowning the whole, gave such a charm to his discourses, that he delighted all who heard him. * * *

"I now return to my own history. I went to Saintes to reside, in order to have the assistance of two able and pious ministers, Mr. Mainard and Mr. Borillak, in pursuing my theological studies. After awhile they also were cast into prison, and I returned home.

"My brother Peter had been minister of my father's parish ever since his death, and about this time he was seized under a 'lettre de cachet,' and confined in the castle of Oleron. The church at Vaux was levelled to the ground, and most of the churches in our province shared the same fate; thus my neighbors could not reach a place of worship without great fatigue; and feeling compassion for them, as sheep without a shepherd, I felt myself called on to invite them to join me in my family devotions. The number who came soon increased to one hundred and fifty, and I then recommended to them not to come daily as heretofore. I frequently changed the days of assembling, giving previous notice to the people; and we continued this endearing intercourse uninterruptedly during the whole winter.

"A rumor prevailed that there were meetings in our parish, and that I was the preacher; but we had no traitor in our ranks, and the papists were unable to discover any thing with sufficient certainty to make a handle of. Our holy intercourse continued without any drawback till Palm Sunday, 1684. On that day some of my neighbors came to my house as usual, and not finding me there they retired to the wood behind my house, and one of their number, a mason by trade, who read very well, officiated as their pastor. He read several chapters from the Bible, the prayers of the church, a sermon, and they sang psalms. This meeting having been open, it was noised abroad, and on Holy Thursday from seven to eight hundred persons assembled on the same spot, the mason again their pastor; and on Easter day the number increased to a thousand. * * *

"Warrants were issued; and the Grand Provost and his archers were in search of us. I was absent; the country people, having had timely notice, hid themselves in the wood, and after scouring the country, the archers found no one but the poor mason, who had officiated; him they took, fastened to a horse's tail, and dragged to Saintes, a distance of fifteen miles. They threatened him in all kinds of ways, and assured him that he would be hanged as soon as they reached the capital. It was late when they arrived—too late, they told him for him to be hanged that night, and that one solitary chance for life yet remained to him, and that was to recant without delay; for if he once got within the walls of the prison, a hundred religions would not save him from death."

Mr. Fontaine was also thrown into prison; and here commences the adventurous life of this singular man.

At the revocation of the Edict of Nantes, after he had failed in the council of elders and ministers, to prevail on that body to resist persecution, and call on the protestants to take up arms in defence of their religion, their lives, and their property, he found himself no longer useful as a minister, and fled from France, he and his lady-love, in an open boat, and passed as drunken fishermen, under the guns of a man-of-war that guarded the coast against the escape of protestant refugees. He landed pennyless in England; mortgaged the jewelry of his intended; engaged in commerce; married; became a schoolmaster; then a preacher; afterwards a weaver; then a manufacturer of calimancos, and a grocer. His skill and success in the two last excited the admiration, and soon the envy and jealousy, of those around him.

From England he retired to Cork, where he became a dyer and a manufacturer of broadcloths. Here he distinguished himself as a preacher, and was presented with the freedom of the city. But preaching from the decalogue, his sermon on the eighth commandment, "thou shalt not steal," applied with so much force to some of his congregation, exciting them against him, that he deemed it expedient to resign his charge as minister. He again engaged in commerce; entered into the tobacco trade of Virginia; removed to Bear Haven; turned fisherman; became a justice of the peace; was attacked by a French corsair; he, assisted by his wife and children, defended themselves against great odds; drove off the privateer, who recruited; renewed the attack; battered down the house; capitulated and carried his son off as a hostage. And he

himself became a pensioner of the British government. He retired from Bear Haven, always a poor man, and again became a schoolmaster.

Amidst all his misfortunes, he contrived to give his children good educations. His sons, James, Peter and Francis, and his son-in-law, Matthew Maury, emigrated to Virginia about 1717; from whom have descended the Maurys and Fontaines of this country.

Mr. Fontaine's grandson, the Rev. James Maury of Albemarle county, was the tutor of our Jefferson and Madison, and the father of Mr. Maury of New York, well known in Virginia as the "Old Consul." Many years ago, when in Europe, this last gentleman wishing to trace the relationship between his branch of the family, and the celebrated Abbé Maury, opened a correspondence with that dignitary, from which we venture the following extracts.

"Paris, Sept. 8, 1777.

"I have just received the letter, sir, with which you have honored me, and I hasten to thank you for the many polite things you are so kind as to say of me, as well as for the desire you express to know whether we belong to the same family. From the details into which you enter, it would appear we have a common origin; and in order that you may form your own opinion, I think I ought to tell you at once all I know of the name I bear.

"My family, down to my father inclusive, was originally from Arnagon, a small village in Lower Dauphiny, where they possessed several manors, and where they had professed the protestant religion for nearly two centuries. At the time of the revocation of the Edict of Nantes, my grandfather, who had eleven older brothers—himself too young to leave home with them—was brought up by one of his maternal relatives in another village, called Péage, three leagues distant from Arnagon; he married there, and abjured; and at the commencement of the present century he settled at Valais, a town in the county of Avignon, where my father died, after having re-established his fortune by commerce and an advantageous marriage. Thanks to his good example, and the education he gave his children, they have done well, and he had the satisfaction of living to witness my advancement. Having given you this history of the branch from which I spring, I will proceed to relate what I have heard of the others whom I have never known.

"Immediately after the revocation of the Edict of Nantes, all our property was confiscated. The eleven brothers of my grandfather entered the king's service; three were killed at Mal Plaquet; another made his fortune, and died in 1762—he was a brigadier in the Royal Life Guards; another settled on the confines of Perigord, or Guienne: but we have never had any intercourse with him, because of my grandfather having left his native place, and his children becoming orphans at an early age. We are in total ignorance of what has become of the remainder of the family.

"You see, sir, that in supposing yourself a descendant of one of these dispersed children, you will find no illustrious titles: we have little to boast of but the honor, the virtues, and the reputation for honesty and uprightness, which our ancestors always enjoyed in the neighborhood where they lived. Let us cherish the remem-

brance, so that we may never degenerate from those modest and estimable privileges. Let their example serve us instead of the distinctions they could not transmit.

"The conformity of name appears to indicate identity of race. I wish with all my heart we could discover the proof of it. For if we do spring from one stem, the separation cannot be far distant. It would be very agreeable to me to be related to a man who introduces himself with so much kindness as you do. But if it may not be by blood, it shall at any rate be by esteem, and the consideration and sincerity with which I have the honor to be, sir, your most obedient and very humble servant,

"MAURY, (*Jean Siffrein*.)

"Abbé de l'academie des arcades de Rome in 1773
Commendataire de la Frenade, Chanoine, Vicair
Général qui official de Lombes qui Prédicateur ordinaire du Roi.

"To JAMES MAURY, of Virginia."

"Paris, May 12, 1778.

"I am no more in the habit, *Monsieur*, of being the slave of ceremony than you are. Your letters bespeak a man amiable, educated, and well-bred, and far from finding any fault with your conduct towards me, I am on the contrary much flattered. Do more justice to yourself and to me also, and above all make no apology when I alone am to blame. * * * *

"You are then on the eve of returning to Virginia. I wish you all kinds of good luck. I shall be overjoyed if I can be of any service to you in Paris during your residence in America. You should not doubt of my wish to hear from you as soon as you arrive. Besides the ties of blood, which perhaps unite us, those of friendship are sufficient to inspire me with a lively interest. I entreat you to believe that I can never be indifferent to the success of a man who makes himself known with as much merit as you do. Tell your countrymen that they are dear to all France; that we wish for their prosperity; that we glory in their triumphs; that we admire their courage, and respect their virtues; and that we could not feel more interested in a French army, than we are with the troops of Congress. Nothing is talked of here but the brave Americans; and we must acknowledge that for three years past, they have multiplied actions calculated to keep up our admiration. This people is destined to play a grand part on the theatre of the world; but to whatever pitch of glory your descendants may rise, they will never forget the present generation, and the liberators of America will live forever in the memory of man. * * * *

"I pray you to accept my wishes for your welfare at the moment of your departure; and be assured of the distinguished consideration with which I have the honor to be, sir, your most obedient and very humble servant,

"MAURY,

"Abbé de la Frenade, &c. &c.

"JAMES MAURY, of Virginia."

The merit of rescuing this interesting little memoir from the dusty shelf, where it had remained for more than a hundred years, belongs to a lady. In the office of translator and compiler, she has acquitted herself with much grace, and deserves the thanks of the reading public, no less than of her two thousand kinsfolk to whom her work is dedicated.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

THOUGHTS ON SLAVERY.

BY A SOUTHRON.

Addressed to the Hon. Hugh S. Legaré of South Carolina.

"Truth is the supreme good, the first aliment of the soul. To search after truth, is the only employment correspondent with the high destinies of man. But like the Egyptian Isis, truth is a mystic divinity covered with a veil, which the wise and the virtuous of all ages have labored to raise, but which no one can entirely remove." To attain truth, is to see and to know God, for God alone is truth. In the merciful dispensations of Providence, the mind of man is made inquisitive, and its powers elastic and expansive; and while to the faithful and persevering worshipper the light of truth is slowly revealed from the depths of the sanctuary, it can never burst upon him in the fulness of its glory, for none can look upon it and live. It is only when this corruption shall have put on incorruption, when this mortal shall have been clothed with immortality, that truth can be fully revealed. Such is the divine excellence of truth, and such is the inquisitive character of the human mind, that although truth be unattainable in this life, the soul of man, in its progress towards this hidden divinity, is so refreshed and illumined by every emanation, that he is irresistibly attracted, and his thirst for further knowledge increases with every ray of light. This occupation, then, is the proudest and most beneficial exercise of the energies of man. To the contemplative mind there is a striking similitude between the institution of the natural, and the correction and enlargement of the moral and intellectual world. It was the exertion of the loftiest attribute of the Ancient of Time that imposed order on element, and gave to early confusion and commixture the impress of character, and the form and figure of action. To power thus exercised, and to benevolence so directed, there can be no homage so meet as that which proceeds from the family reflecting his image; and there can be no tribute more correspondent or acceptable than the cultivation and refinement of that intellect, which, emanating from himself, lifts the creature man from the degradation of the dust, and places him in the scale of creation near to the ministering angel. The intellect of man is the germ of truth. It is a spark struck from the eternal rock of ages, and its proper destination is the bosom of the parent. Let us remember that we have been endowed with talents to be useful, and that the end of wisdom is truth. In all the vicissitudes of our earthly pilgrimage let us reflect, that, although the fulness of truth is unattainable here, there is a realm beyond the skies, where the chaste and virtuous mind will exult in a fulness of vision, to which space will object no limit, and to which time can oppose no barrier. It is this reflection, which should incite us to untiring exertion in this lofty and legitimate pursuit of the understanding. In accordance with these principles, truth is the sole object

of our travail in the discussion of the perplexing question, which we have placed at the head of this article.

Sternly fixed in our conviction that the best interests and the ultimate destiny of this people are inseparably connected with the maintenance of the bond of union; with no prejudices or prepossessions for or against any sectional division of the confederacy; looking neither to the North, nor the South, to the East, nor to the West, but filled with a holy love for our common country; thoroughly assured that the perpetuity of our institutions mainly depends upon a calm and dispassionate consideration of the exciting question of slavery; we have boldly resolved to unfold those views which have been the result of much reading and reflection.

We maintain the following propositions:

1. That slavery is coeval with society, necessary for its formation and growth, and was in the primitive ages a natural condition of a large portion of the human family.

2. That it is *universal*, and has existed in all ages.

3. That it is neither prohibited by the *MORAL* nor the *DIVINE* law.

4. That christianity alone, by its exalting influence, and by its peaceful and gradual operation, can abolish it.

5. That its sudden abolition by any people, either by a fanatical perversion of the mild principles of christianity, or by any intemperate agency, must be necessarily attended with frightful social, and political revolutions, destructive alike to the bond and free.

In the discussion of this interesting question, we do not design to treat each of these propositions separately, or in the precise order in which they are announced; for, many of the evidences and illustrations, which multiply around us as the stars of the firmament, will throw their rays over the whole field we traverse. Before we proceed to show that slavery derives its origin from the very nature and condition of primitive man, it will be proper to form a correct idea of slavery itself. In treating of the origin of slavery, we must carefully avoid the common error of forming our opinions upon the present state of things, or of permitting them to be influenced by the existing state of servitude; but we must ascend at once to the primitive ages, and calmly observe the condition of the early settlers of the world.

Of all the theories of the origin of slavery proposed by modern writers—especially by those who immediately preceded or followed the French revolution, when the attributes of the Deity himself were made to bow before the insolent assertion of the "Rights of Man"—there are few which more feebly oppose the austere rules of sound reason than those of M. de Montesquieu. "Slavery," says this far-famed writer, "slavery, properly so called, is the establishment of a right, which gives to one man such a power over another, as renders him absolute master of his life and fortune." And assuming this position, he declares that "the state of slavery is in its own nature bad; that it is neither useful to the master nor to the slave; not to the slave, because he can do nothing through a motive of virtue, nor to the

master, because by having an unlimited authority over his slaves, he insensibly accustoms himself to the want of all moral virtues, and becomes fierce, hasty, choleric, voluptuous, and cruel." This is not slavery as it exists in this country, where it is protected by the laws, and is by the fundamental compact made an integral portion of the basis of federal representation. It is the *abuse of slavery* which is thus defined. And indeed the judicious observer will readily perceive, that the denunciations of slavery in all the writers upon natural law, apply only to the flagrant abuse of this institution, and have no reference to the qualified slavery or domestic servitude of the southern states.

M. de Montesquieu proceeds to state the various theories which have prevailed in relation to the origin of slavery, and condemns them all. But we will soon discover that its true origin has escaped his observation, and that it neither originated in despotism, nor tyranny, nor contract, nor war, nor conquest, nor by captivity. Its origin will be traced to the infancy of social institutions, and the necessities and condition of the human family in those primitive ages, when the whole world was an unsubdued wilderness, and the labor of the whole human family was absolutely necessary for the erection of the first establishments of man upon the face of the earth. If this be the true origin of slavery, then all other theories are false, and this condition is founded in the nature of man; and Montesquieu himself declares, that "slavery ought to be founded in the nature of things."

Elevating our minds then above the prejudices of the age in which we live, let us ascend to the early ages, and with a docile and sober spirit, seek for information of those primitive races by whom slavery was introduced, among whom it was firmly established, and from whom it has descended to us.

The inquisitive author of the *Spirit of Laws* says, that "Aristotle endeavors to prove that there are *natural slaves*, but what he says is far from proving it." To Aristotle, one of the most profound of the philosophers of antiquity, we confidently appeal, and with the more confidence, because in this iron age of utilitarianism, his material philosophy, fortified with all the powers of the "greatest, wisest, meanest of mankind," has been preferred to the spiritual sublimity of the divine Plato. Aristotle has expressly declared, that "in the *natural state of man*, from the origin of things, a portion of the human family must *command*, and the remainder *obey*; that the distinction which exists between *master* and *servant* is a distinction at once *natural* and *indispensable*; and that when we find existing among men *freemen* and *slaves*, it is not *man*, but *nature* herself, who has ordained the distinction." "*Natura plura quas imperent, et quas parent; natura aliter herus, aliter servus; esse igitur naturam, hos quidem liberos, hos vero servos, apertum est.*" And Montesquieu himself, while, in blind obedience to the spirit of the age in which he lived, he denies the force of Aristotle's reasoning, boldly affirms that slavery did not originate in the abuses of despotism, nor by conventional compact, nor by human institution, but that it must be derived from the very nature of things—"de la nature même." And this enunciation of the *natural* origin of slavery, so revolting to the friends of the rights of man, so directly opposed to the prevailing notions of freethinkers, was made by Aristotle, in a period of

unmitigated slavery, without fear of contradiction. He proclaimed it at the head of the wisest philosophers of antiquity, who lived in the midst of slavery; in the face of all Greece, which concurred in his opinion; he declared it to the nations of the earth, which, as well as Greece, possessed multitudes of intelligent slaves deeply interested in its refutation; it was advanced as an unquestionable fact, open to the observation of the whole world, which none could question, because it was the deliberate opinion of the age in which he lived. Now, it must be admitted that an assertion so positive, proclaimed without contradiction among a free people in an age of slavery, in the midst of a multitude of nations who held in slavery men who were learned in all the philosophy of the schools, and imbued with all the wisdom of the times, many of whom were distinguished writers, deeply interested in its denial,—that such an assertion, fortified with such testimony, is not without much weight in the investigation of the subject we discuss.

Having thus considered the force of this declaration of Aristotle, let us inquire whether we shall reject the testimony of all antiquity in its favor, and whether we can concur with M. de Montesquieu in the opinion, that the reasoning of the Stagyrite is inconclusive.

An attentive perusal of the first six chapters of Aristotle's political treatise will show, that this great philosopher has revealed the true cause of the necessity of slavery in the first ages of man. The first step of the primitive men in their march towards civilization, their first effort to subdue nature, was in the erection of a domestic establishment. And for that purpose, in that rude age, when nature herself was wild and unsubdued, were required multitudes of men, beasts of burden, and instruments and provisions of many kinds. In the very words of the philosopher: "*Instrumentorum autem hæc sunt inanimata, hæc autem animata; mansueta animalia propter cibum et propter usum, fera autem cibi, et aliorum adminiculorum causa.*" Now, at the origin of things, in the infancy of man, when the first establishment was formed, to whom would necessarily appertain the right of controlling and directing these necessary agents? To the younger born—or to the *father of the family* alone? And while there was yet upon earth but a single establishment, the descendants of this family were compelled to remain with the parent, since it was impossible for them to establish themselves elsewhere, the labor of all being required to complete and maintain the first, before other establishments could be made. The authority exercised by the parent must necessarily have been absolute, and the nature of the services required of his descendants essentially *servile*. So that whatever the French philosophists of modern times may say of the natural condition of a people, it is evident that in the earliest state of society, the slavery of the after-born necessarily existed, and originated in the very nature of things, and in the primitive condition of man. Notwithstanding the objection of M. de Montesquieu to this declaration of Aristotle, we find in various passages of the *Spirit of Laws*, the cause of the indispensable necessity of slavery clearly indicated. In the thirtieth book we find this unquestionable and historical fact openly proclaimed: "*que dans les premiers temps les enfans résidaient dans la maison du père, et s'y établissaient*"—that in the earliest times the descendants

remained and settled themselves in the establishment of their parent. And why did they so settle themselves? From the very necessities of their situation, for Montesquieu himself states, that in those rude and early ages, all nature being yet an unsubdued wilderness, the "great labor necessary to clear the face of the earth required *beaucoup de serfs*"—a multitude of slaves. Now as in those primitive times the earth was wild and unproductive, and as in that rude age unaided by the arts and sciences, the subjection of the earth to tillage required the whole labor of the whole human family, and as this labor was of the most servile kind, and must necessarily have been that of the descendants directed and governed by the father of the family; it follows that slavery, as it now exists, and as it has existed in every age of the world, is coeval with the first social institutions, and originated in the nature and necessities of man. But even if Aristotle had never proclaimed, and Montesquieu had never denied the true origin of slavery; if all the revolutionary writers of the last century, in their wild speculations upon the nature and rights of man, had been silent on this subject; reason alone would have fully established this truth, fortified as it is by the whole current of history. All will admit that in the earliest times the descendants of the first family must have remained a long time under the authority and in the dwelling of the father, before they could erect a separate establishment; that Moses, notwithstanding his distinguished abilities and mental superiority, watched for many years the flocks of Jethro, his father-in-law; that Jacob, even after his marriage, remained a long time in the service of Laban; and that the twelve sons of Jacob continued long in the service of their father, before they were able to erect separate establishments. And why were they unable to erect these separate establishments? Because in that rude age, and in the unsubdued and unproductive state of the earth at that time, immense power and resources were requisite for the erection of a new establishment; and because the parent himself, however anxious to erect separate establishments, was unable to do so, since men multiplied on the face of the earth much more rapidly than those establishments possibly could. And if there were such difficulty in the erection of new establishments in those early ages among a pastoral people, who required only tents for their dwellings, how much more slowly must they have progressed among the tillers of the earth, whose establishments must have been so much more expensive and laborious? And if the father of the family, invested with supreme authority and possessed of such extensive means, found it for a long time so entirely impossible to establish independently his immediate offspring, who would naturally occupy his first attention, how could he emancipate the remoter generations and their descendants? Reason itself teaches this impossibility. And as these descendants and their generations thus subjected to servile employment, could neither live independently of their parent, nor labor for themselves, it follows that Aristotle is right when he asserts, that in the primitive condition of the human family, slavery was necessarily the natural state of the people: "*esse igitur natura, hos quidem liberos, hos vero seruos, apertum est.*"

In discussing the state of society among the primitive races of men, we must carefully avoid all impressions

which we derive from the present state of things. We must discard the social contract of Rousseau, the bewildering sophisms of philosophers, and the delirious ravings of the Jacobins. With the social and political rights of man in the eighteenth century, we have at present no concern. We desire to ascend to the dawn of civilization, to the first races of men, and contemplate them, not with relation to subsequent theories, but simply as we find them when they first walk forth to tame and to subdue the wilderness. We are not to speak of wild and uncultivated nature as of a settled and productive clime—of the earth, before man erected upon its face his first dwelling, as of a land covered with habitations and cities. In our age, when the whole earth is subdued, and arts and sciences, trades and manufactures, agriculture and commerce, have attained a high degree of excellence, a parent finds little difficulty in establishing his children independently as soon as they attain the age of manhood. But in the first ages of man this was evidently impossible. Let us revert to the primitive age, and contemplate the first occupant who enters upon a waste and uncultivated territory. To subdue it, he will require the constant labor of a numerous progeny—he must have beasts of burden, flocks, and all necessary provisions; he has neither tents, nor houses, nor manufactures, nor mills, nor granaries, nor enclosures, nor arms, nor ploughs. But to erect the first habitation he must have many of these, and numberless other necessary agents. And can the modern philosopher tell, how many ages of toil and improvement will be required to erect this first establishment among this primitive and unlettered people? We know that it is exceedingly difficult to divest our reason and reflection of all the circumstances which surround us in this age of civilization and refinement, and to contemplate with a calm and philosophic mind the rudiments of society. Yet such discipline is required, before we can arrive at truth. It forms no part of our design to trace the gradual improvement of the races of the human family, and the slow degrees with which they advanced to that state, when the rigorous bonds of primitive slavery were relaxed, and their descendants were emancipated.

Much has been said by modern philosophists about the state of nature, or the savage state of man, unsophisticated, unrefined, and uncultivated. "All men are by nature born free and equal," is their motto. And yet, slavery is no where so oppressive as among the savages in their state of nature. There are no people upon the face of the earth among whom the chiefs are more despotic, the rulers more cruel, or the heads of families more exacting, the lower classes more debased, or the women more miserable. Indeed, such is the servile degradation of these latter, that mothers not unfrequently destroy their female children as soon as they are born, to relieve them from this horrible destiny. Such is the tendency of the human understanding to be influenced and warped by the circumstances which surround us, that whenever, in our fertile territories, where every thing is cleared and improved, slavery is tolerated, we denounce it as a tyrannical usurpation of power, and demand in the pride of our hearts, *if man was born to be a slave?* To this voice of ungovernable pride, we would reply, that in the primitive state of society it could not in the nature of things have been

master, because by having an unlimited authority over his slaves, he insensibly accustoms himself to the want of all moral virtues, and becomes fierce, hasty, choleric, voluptuous, and cruel." This is not slavery as it exists in this country, where it is protected by the laws, and is by the fundamental compact made an integral portion of the basis of federal representation. It is the *abuse of slavery* which is thus defined. And indeed the judicious observer will readily perceive, that the denunciations of slavery in all the writers upon natural law, apply only to the flagrant abuse of this institution, and have no reference to the qualified slavery or domestic servitude of the southern states.

M. de Montesquieu proceeds to state the various theories which have prevailed in relation to the origin of slavery, and condemns them all. But we will soon discover that its true origin has escaped his observation, and that it neither originated in despotism, nor tyranny, nor contract, nor war, nor conquest, nor by captivity. Its origin will be traced to the infancy of social institutions, and the necessities and condition of the human family in those primitive ages, when the whole world was an unsubdued wilderness, and the labor of the whole human family was absolutely necessary for the erection of the first establishments of man upon the face of the earth. If this be the true origin of slavery, then all other theories are false, and this condition is founded in the nature of man; and Montesquieu himself declares, that "slavery *ought* to be founded in the nature of things."

Elevating our minds then above the prejudices of the age in which we live, let us ascend to the early ages, and with a docile and sober spirit, seek for information of those primitive races by whom slavery was introduced, among whom it was firmly established, and from whom it has descended to us.

The inquisitive author of the *Spirit of Laws* says, that "Aristotle endeavors to prove that there are *natural slaves*, but what he says is far from proving it." To Aristotle, one of the most profound of the philosophers of antiquity, we confidently appeal, and with the more confidence, because in this iron age of utilitarianism, his material philosophy, fortified with all the powers of the "greatest, wisest, meanest of mankind," has been preferred to the spiritual sublimity of the divine Plato. Aristotle has expressly declared, that "in the *natural state of man*, from the origin of things, a portion of the human family must *command*, and the remainder *obey*; that the distinction which exists between *master* and *servant* is a distinction at once *natural* and *indispensable*; and that when we find existing among men *freemen* and *slaves*, it is not *men*, but *nature* herself, who has ordained the distinction." "*Naturâ plura quæ imperent, et quæ parent; natura aliter herus, aliter servus; esse igitur naturâ, hos quidem liberos, hos vero servos, apertum est.*" And Montesquieu himself, while, in blind obedience to the spirit of the age in which he lived, he denies the force of Aristotle's reasoning, boldly affirms that slavery did not originate in the abuses of despotism, nor by conventional compact, nor by human institution, but that it must be derived from the very nature of things—"de la nature même." And this enunciation of the *natural* origin of slavery, so revolting to the friends of the rights of man, so directly opposed to the prevailing notions of freethinkers, was made by Aristotle, in a period of

unmitigated slavery, without fear of contradiction. He proclaimed it at the head of the wisest philosophers of antiquity, who lived in the midst of slavery; in the face of all Greece, which concurred in his opinion; he declared it to the nations of the earth, which, as well as Greece, possessed multitudes of intelligent slaves deeply interested in its refutation; it was advanced as an unquestionable fact, open to the observation of the whole world, which none could question, because it was the deliberate opinion of the age in which he lived. Now, it must be admitted that an assertion so positive, proclaimed without contradiction among a free people in an age of slavery, in the midst of a multitude of nations who held in slavery men who were learned in all the philosophy of the schools, and imbued with all the wisdom of the times, many of whom were distinguished writers, deeply interested in its denial,—that such an assertion, fortified with such testimony, is not without much weight in the investigation of the subject we discuss.

Having thus considered the force of this declaration of Aristotle, let us inquire whether we shall reject the testimony of all antiquity in its favor, and whether we can concur with M. de Montesquieu in the opinion, that the reasoning of the Stagyræite is inconclusive.

An attentive perusal of the first six chapters of Aristotle's political treatise will show, that this great philosopher has revealed the true cause of the necessity of slavery in the first ages of man. And for that purpose, in that rude age, when nature herself was wild and unsubdued, were required multitudes of men, beasts of burden, and instruments and provisions of many kinds. In the very words of the philosopher: "*Instrumentorum autem hæc sunt inanimata, hæc autem animata; mansueta animalia propter cibum et propter usum, feræ autem cibi, et aliorum administrulorum causa.*" Now, at the origin of things, in the infancy of man, when the first establishment was formed, to whom would necessarily appertain the right of controlling and directing these necessary agents? To the younger born—or to the *father of the family* alone? And while there was yet upon earth but a single establishment, the descendants of this family were compelled to remain with the parent, since it was impossible for them to establish themselves elsewhere, the labor of all being required to complete and maintain the first, before other establishments could be made. The authority exercised by the parent must necessarily have been absolute, and the nature of the services required of his descendants essentially *servile*. So that whatever the French philosophists of modern times may say of the natural condition of a people, it is evident that in the earliest state of society, the slavery of the after-born necessarily existed, and originated in the very nature of things, and in the primitive condition of man. Notwithstanding the objection of M. de Montesquieu to this declaration of Aristotle, we find in various passages of the *Spirit of Laws*, the cause of the indispensable necessity of slavery clearly indicated. In the thirtieth book we find this unquestionable and historical fact openly proclaimed: "*que dans les premiers tems les enfans restaient dans la maison du père, et s'y établissaient*"—that in the earliest times the descendants

remained and settled themselves in the establishment of their parent. And why did they so settle themselves? From the very necessities of their situation, for Montesquieu himself states, that in those rude and early ages, all nature being yet an unsubdued wilderness, the "great labor necessary to clear the face of the earth required *beaucoup de serfs*"—a multitude of slaves. Now as in those primitive times the earth was wild and unproductive, and as in that rude age unaided by the arts and sciences, the subjection of the earth to tillage required the whole labor of the whole human family, and as this labor was of the most servile kind, and must necessarily have been that of the descendants directed and governed by the father of the family; it follows that slavery, as it now exists, and as it has existed in every age of the world, is coeval with the first social institutions, and originated in the nature and necessities of man. But even if Aristotle had never proclaimed, and Montesquieu had never denied the true origin of slavery; if all the revolutionary writers of the last century, in their wild speculations upon the nature and rights of man, had been silent on this subject; reason alone would have fully established this truth, fortified as it is by the whole current of history. All will admit that in the earliest times the descendants of the first family must have remained a long time under the authority and in the dwelling of the father, before they could erect a separate establishment; that Moses, notwithstanding his distinguished abilities and mental superiority, watched for many years the flocks of Jethro, his father-in-law; that Jacob, even after his marriage, remained a long time in the service of Laban; and that the twelve sons of Jacob continued long in the service of their father, before they were able to erect separate establishments. And why were they unable to erect these separate establishments? Because in that rude age, and in the unsubdued and unproductive state of the earth at that time, immense power and resources were requisite for the erection of a new establishment; and because the parent himself, however anxious to erect separate establishments, was unable to do so, since men multiplied on the face of the earth much more rapidly than those establishments possibly could. And if there were such difficulty in the erection of new establishments in those early ages among a pastoral people, who required only tents for their dwellings, how much more slowly must they have progressed among the tillers of the earth, whose establishments must have been so much more expensive and laborious? And if the father of the family, invested with supreme authority and possessed of such extensive means, found it for a long time so entirely impossible to establish independently his immediate offspring, who would naturally occupy his first attention, how could he emancipate the remoter generations and their descendants? Reason itself teaches this impossibility. And as these descendants and their generations thus subjected to servile employment, could neither live independently of their parent, nor labor for themselves, it follows that Aristotle is right when he asserts, that in the primitive condition of the human family, slavery was necessarily the natural state of the people: "*esse igitur natura, hos quidem liberos, hos vero servos, apertum est.*"

In discussing the state of society among the primitive races of men, we must carefully avoid all impressions

which we derive from the present state of things. We must discard the social contract of Rousseau, the bewildering sophisms of philosophers, and the delirious ravings of the Jacobins. With the social and political rights of man in the eighteenth century, we have at present no concern. We desire to ascend to the dawn of civilization, to the first races of men, and contemplate them, not with relation to subsequent theories, but simply as we find them when they first walk forth to tame and to subdue the wilderness. We are not to speak of wild and uncultivated nature as of a settled and productive clime—of the earth, before man erected upon its face his first dwelling, as of a land covered with habitations and cities. In our age, when the whole earth is subdued, and arts and sciences, trades and manufactures, agriculture and commerce, have attained a high degree of excellence, a parent finds little difficulty in establishing his children independently as soon as they attain the age of manhood. But in the first ages of man this was evidently impossible. Let us revert to the primitive age, and contemplate the first occupant who enters upon a waste and uncultivated territory. To subdue it, he will require the constant labor of a numerous progeny—he must have beasts of burden, flocks, and all necessary provisions; he has neither tents, nor houses, nor manufactures, nor mills, nor granaries, nor enclosures, nor arms, nor ploughs. But to erect the first habitation he must have many of these, and numberless other necessary agents. And can the modern philosopher tell, how many ages of toil and improvement will be required to erect this first establishment among this primitive and unlettered people? We know that it is exceedingly difficult to divest our reason and reflection of all the circumstances which surround us in this age of civilization and refinement, and to contemplate with a calm and philosophic mind the rudiments of society. Yet such discipline is required, before we can arrive at truth. It forms no part of our design to trace the gradual improvement of the races of the human family, and the slow degrees with which they advanced to that state, when the rigorous bonds of primitive slavery were relaxed, and their descendants were emancipated.

Much has been said by modern philosophers about the state of nature, or the savage state of man, unsophisticated, unrefined, and uncultivated. "All men are by nature born free and equal," is their motto. And yet, slavery is no where so oppressive as among the savages in their state of nature. There are no people upon the face of the earth among whom the chiefs are more despotic, the rulers more cruel, or the heads of families more exacting, the lower classes more debased, or the women more miserable. Indeed, such is the servile degradation of these latter, that mothers not unfrequently destroy their female children as soon as they are born, to relieve them from this horrible destiny. Such is the tendency of the human understanding to be influenced and warped by the circumstances which surround us, that whenever, in our fertile territories, where every thing is cleared and improved, slavery is tolerated, we denounce it as a tyrannical usurpation of power, and demand in the pride of our hearts, *if man was born to be a slave?* To this voice of ungovernable pride, we would reply, that in the primitive state of society it could not in the nature of things have been

otherwise. From the subjection and slavery of the first men, have sprung all those improvements, have been developed the germs of all those resources, which have since enabled their descendants to ameliorate the condition of the serf, and not unfrequently to admit him to a fraternity of freedom. It is not by the declamations and theories and systems of philosophers, reasoning from the present state of things, that an uncultivated and waste desert can be subdued and peopled with cities. Society could not have originated in any other manner than we have shown, neither could slavery have had any other origin than in the nature of things and the primitive condition of man. And if, in the present advanced state of society, it requires so much time and labor, and expense, to establish firmly a few colonies on the coast of Africa, although their founders are armed with all the powers and resources of the most refined nations of the earth, and are stimulated by all the enthusiasm of philanthropy, and all the hopes of religion, how much and how great labor was necessary in the primitive and rude age of man, to lay so broadly and deeply the foundations of that society which now flourishes upon the face of the earth?

If the position which we have taken be correct, and the labor of the whole family at the first institution of society was absolutely necessary for the erection of the first establishment, and that until its completion no further establishment could be made, then were they all deeply interested in its completion, and each of those engaged in it must have known, that a premature liberty, far from being useful or desirable, would have been for them the most helpless and miserable of all conditions. Let us suppose some one of our modern philosophers, filled with enthusiasm for the natural rights of man, should find himself cast by a tempest among a people thus occupied in the first rudiments of society, and impelled by hunger, should present himself at the door of this first establishment, and after having been refreshed, should arise, full of indignation at the subjection of the multitude around him, and thus address them: "Senseless creatures! why do you, who compose so vast a multitude, thus tamely submit to the tyranny of a single man? Remember that in a state of nature all men are born free and equal. Fire this habitation; burn it to the earth! Arise in your strength—break asunder your fetters on the head of your oppressor! Awake—arise from your enslaved condition, and resume your natural rights!" &c. &c. How would this harangue be received by this people? They would reply: "You speak of primitive men and natural rights. You behold them in us, since there have been none before us. You exhort us to fire this common dwelling, which contains all our property, the fruit of all our labors, and affords us shelter from the inclemency of the weather. It contains all the wealth of the past, and constitutes our only hope for the future. And when every thing shall have been consumed, what will be our condition?" "You will live," he replies, "upon wild roots and berries; you can roam the forest in the freedom of nature; you will be free and you will be happy." "If that life be so happy," they respond, "wherefore have you come among us seeking the necessities of life?" And they would drive this madman forth from among them to preach his freedom to the bears. In these primitive ages, so far from regarding this premature freedom as a bless-

ing, these slaves considered it as one of the most terrible chastisements, which their masters could inflict upon them. Thus, when to appease the jealousy of Sarah, Abraham was compelled to send forth his bondswoman, Hagar, into the wilderness, how emphatically does the sacred historian express the affliction of Abraham and Hagar, of the *master* and the *slave*? "And the thing was very grievous in Abraham's sight, because of his son. And Abraham rose up early in the morning, and took bread and a bottle of water, and gave it unto Hagar, and the child, and sent her away; and she departed and wandered in the wilderness of Beer-Sheba. And the water was spent in the bottle, and she cast the child under one of the shrubs. And she went, and sat her down over against him, a good way off, as it were a bow-shot; for she said, let me not see the death of the child. And she sat over against him, and lifted up her voice, and wept. And God heard the voice of the lad; and the angel of the Lord called to Hagar out of heaven, and said unto her, what aileth thee, Hagar? Fear not, for God hath heard the voice of the lad where he is. Arise, lift up the lad, and hold him in thy hand, for I will make him a great nation."

In the first establishment, common to all, they possessed every necessary of life; beyond it there was nothing, not even the necessary instruments of labor, and for supporting life. In imposing upon the primitive race the stern necessity of union, the Author of nature could have proposed to himself nothing but their happiness. If on the contrary, in the origin of society, he had permitted them to exercise this much boasted natural right of wandering away from their father's house in search of this ideal freedom—the bond of society would have been ruptured, the father would have refused to toil for the son, and the son for the father, the first generation for the second, and the second for the third, because their labors being liable to interruption, could never be completed. And this element of confusion, this principle of freedom, would have prevented the reduction of the earth, or the civilization of man; and as the first habitation could never have been completed, the foundations of social institutions could never have been laid. It is fortunate for mankind, that the philosophy of the eighteenth century was not broached, until society was so firmly built, that it could only shake the edifice. Slavery, then, commenced with the social institutions of man, and it originated in the great and united labor of the human family requisite to subdue the earth. And although in the subsequent ages, men may have been reduced to slavery by debt, despotism, and conquest, yet slavery originated in none of these, but preceded them all.

But to the authority of Aristotle, to the testimony of history, we superadd a still more convincing proof of the existence of slavery in the earliest ages of man. LET US ASK OF OUR OPPONENTS TO LOOK BACK INTO THE PAST, AND TELL US IN WHAT AGE AND AMONG WHAT PEOPLE IT ORIGINATED. UNTIL THIS QUESTION IS FAIRLY ANSWERED, IT IS CONCLUSIVE OF THE CONTROVERSY. Did it originate with the slave trade on the coast of Africa? with the Romans, in the age when their slaves had become so numerous, that under Spartacus, their leader, they caused Rome to tremble in the

midst of her seven hills? in republican Greece, when the Helots outnumbered the Spartans, and were periodically massacred, to prevent their multiplication? or, in Athens, when they so far outnumbered her citizens? Did it originate under the Jewish dispensation, when Moses proclaimed, that "If a man smite his servant, or his maid, with a rod, and he die under his hand, he shall be surely punished; notwithstanding if he linger for a day or two, he shall not be punished—for he is his money?"

As the Hebrew people are the first of whom we have any authentic record, and slavery, in its severest form, existed among them; as we find bondmen among the patriarchs, and discover that slavery itself, in the earliest history of the first people known to us, was made a special object of the legislation prescribed by the Deity himself for the government of his chosen people, it must have existed before these earliest records, since the subject matter of legislation must have existed before the code which regulates it.

Having traced the origin of slavery to the earliest ages of man, and to the first germs of society; having shown that it originated in the very nature of things, and in the necessities of the human family, we will advance one step farther, and inquire into its MORALITY. Slavery is either moral or immoral in itself, unaffected by the passions or the prejudices of any age or clime. If immoral now, it has always been so, for the canons of morality and virtue are permanent, uniform and universal. All morality and virtue proceed from and have relation to God, and his ordinances and institutions are essentially moral, otherwise he would cease to be God. Man was created a social being, and God is the author of society, and he is the author of all its constituent branches. But we have seen that in the very infancy of society, at its first institution, or at least in the first authentic history we have of its existence, slavery existed as an integral part of the social establishment. Again, the Supreme Ruler of the universe in establishing a code for the government of his chosen people, could neither introduce, nor approve, nor tolerate any institution essentially immoral. Yet we find in almost every page of the Old Testament rules for the government of slaves, a milder law for the Jewish servants, and a rigorous law for the bondsmen. If slavery be immoral, or a crime, then not only the wisest and best of the Greeks and of the Romans, of the Egyptians and of the Arabians, of the Persians and of the Indians, of the Chinese and of the Germans, of the English and of the Americans, but the great Creator himself, has tolerated, approved, systematised, and regulated this abomination of modern philosophers.

Slavery not only existed in the most remote antiquity, but it is the destiny of many among a multitude of people of modern times, who are imperfectly known to us. In Poland, in Russia, in Tartary, in Africa, there are a multitude of slaves, who were not enslaved by any right of conquest. Among many nations parents sell their children, lords their vassals, and sovereigns their subjects; and in India and America there are still slaves. If we interrogate historians, geographers, voyagers, and juris-consults—if we survey all the monuments of nations—if we appeal to the testimony of the various nations of the earth, Asiatics, Africans, Americans, or Europeans, civilized or barbarous, hunters or tillers of the

earth, all proclaim that their primitive state was a state of slavery; neither is there a nation on the globe, however free at this day, that does not bear the mark of its former chains. The celebrated voyager, Cook, tells us that he found among the different islands of the South Sea a state of things similar to that of the feudal system, and a more grinding slavery never existed on earth than was exercised under the rigor of the feudal law. The rigor of the feudal law gradually yielded to the advancing intelligence of the people, and the mild precepts of christianity restrained the abuses and ameliorated the condition of slavery. If we follow Montesquieu closely, from the beginning to the end of the Spirit of Laws, we will find that he maintains with Condorcet, "that the feudal system did not commence with the irruption of the northern hordes into the Roman empire; that it existed a long time before among the barbarians themselves in the fastnesses of their forests; that the feudal rights are of higher antiquity, than is generally supposed; that the domination of the feudal lords was not acquired by usurpation, but was derived from the primitive establishments of their people. They maintained in opposition to the Abbé Du Bos, that there were *serfs* among the Franks, and that SLAVERY DATES ITS ORIGIN AMONG THE NATIONS OF THE EARTH FROM ALL ANTIQUITY." But let us turn to the ENCYCLOPEDIA itself, that text book of the revolutionists, and we will find, that in despite of the bold assertion that all men are born free and equal, it declares the *universality of slavery*. "There is not a page of sacred history"—(we quote from the Encyclopedia,)—"there is not a page of sacred history upon which we do not discover traces of slavery. And profane history likewise, that of the Greeks and of the Romans, and of all the most polished people of the world, is an enduring monument of that ancient injustice exercised with more or less brutality over the surface of the globe, in all times, in all places, and among all nations." The *universality of slavery*, then, is unquestionable, attested by all the evidences of history, sacred and profane, and admitted by the philosophists and agitators themselves. But if the converse of our proposition be true, as these enthusiasts contend, and the *primitive* condition of a people be a state of *independence*, how has it happened that they have so universally fallen into a state of *slavery*? Was it voluntarily and by compact? But how can we comprehend the fact of such a multitude of men, independent by nature, voluntarily degraded to the lowest and basest condition? Was it effected by force? How can we conceive that five hundred have been more feeble than a single individual, and that one man should have the power to subdue such a multitude, and that over the whole face of the earth, in every nation and in every clime? From the universality of slavery—from the fact that its origin may be traced beyond the earliest period of authentic narrative—from its necessity in the nature of things, and for the formation of society—from the divine origin of society, of which, in the early ages, it was a constituent and necessary branch—from its approval and regulation by the Deity himself, and from its freedom from rebuke among the most virtuous and intelligent nations and individuals, from the days of Abraham, the father of the patriarchs, down to Voltaire, the leader of the philosophists and agitators of the eighteenth century—we are led irresistibly to the con-

clusion that what has existed in all ages and in all climes, without the reprobation of the wise and great—what the Deity himself has approved, and governed, and ordained—cannot of itself be IMMORAL. With its abuses we have no concern: it has been abused in every age, by every people.

Admitting the universality of slavery, and acknowledging the agency of the Creator himself, the great founder of society, in its institution, the well ordered understanding is startled with the revolutionary and anti-social speculations of modern philosophists. It has been repeated, until the frequency and vehemence of the repetition has almost thrown the judgment from its balance, that "slavery is one of the odious institutions of man, and that it is opposed to the natural rights of man," &c., &c. It is not true, as we have seen, that slavery is of human institution, since these very writers have admitted that it originated in the necessities of society in the primitive ages; it is not opposed to natural right, since slavery had its origin in the very nature of things, has been approved and regulated by the Author of nature, and sprung from the natural condition of man.

If it be true now, that men have a right to resist even unto the infliction of death those who claim their services in a state of bondage, and all men are born free and equal, it must have been true in all ages from the beginning of time. And if this doctrine were true in the early ages of society, the fathers of the primitive families would have been assassinated by their descendants whom they held in bondage—masters by their servants, lords by their vassals, sovereigns by their subjects; the foundations of society would have been broken up before the social edifice was erected, and the earth would never have been subdued or colonized.

This philosophy was the natural offspring of the French revolution and of the school of unbelievers; it is a doctrine of blood and pillage, and utterly subversive of that order, which forms the bond of social institutions. False as it is, when shall we cease to teach and to believe it? Shall we continue to dismember and overturn, by inculcating a theory which has already corrupted many of the most gifted of the sons of men, which has arrayed people against their rulers, which has covered the earth with the ruins of the social fabric, and which has turned loose upon the face of the earth a spirit of licentiousness, insubordination, and riot, that continue to shake to their deepest foundations all existing establishments?

Let us concede the stern but unwelcome truth, that the existence as well as the universality of slavery is to be attributed to the labor required in the infancy of man to subdue the earth, from which he has been doomed to reap fruit in the sweat of his brow—that it was wisely ordained by the Author of nature himself, and is therefore founded in the very nature of things, and of man. It is only when we have lost sight of this sublime truth, that we proclaim our absurd systems of equality, in a state of nature.

In considering this question, it is essentially necessary that we should accurately distinguish between the natural condition of man, and those principles of political equality, upon which free civil institutions repose, and which like those of this country are regulated by a social compact. And the most conclusive evidence of the propriety of this distinction is exhibited in the formation of our

federal compact, which declares all men to be free and equal, and yet expressly recognizes the existence of slavery, maintains and protects the natural right of the master over the slave, and makes the slave himself a constituent part of the basis of representation. All the parties to this contract are free and equal; but no one will be so frantic as to contend, that by this declaration of the fundamental principle which governs our political compact, it was designed to deny the right of slavery either in this free country or elsewhere. The charter itself legalizes, defends, maintains, and protects slavery. It is the confusion of ideas, which springs from this intermingling of conventional and political equality with the natural rights of man, that deludes us. It will scarcely be affirmed that Thomas Jefferson, the author of the declaration of independence, the great apostle of democracy, and the strenuous advocate of popular rights, deeply imbued as he was with the philosophism of the eighteenth century, designed to repudiate slavery when he declared all men to be free and equal. To his understanding, the distinction was clear between the conventional or political and the natural rights of man; and he well understood that in the formation of a political compact, the slave, from his inability to contract, could be no party.

We have traced slavery as far back as the days of the patriarchs; we have shown, that it originated in the nature of things and the condition of primitive man; we have observed the rules prescribed by Jehovah in the Jewish dispensation for its government; we will now advance to another link in the chain of testimony.

It is not unfrequently objected to evidences derived from the Old Testament on this subject, that the code of laws prescribed for the government of the Jewish people was peculiarly accommodated to the gross perceptions of that sensual race, and was never designed to be rigorously perfect in its morality. The obvious reply to this is, that a law prescribed by a Supreme Being for the guidance of his people must be essentially moral, and that although such institutions may not have been perfect in themselves, yet it is impossible that any portion of that law should have been immoral; for, this would be to make God the author of crime. But admitting this objection in its full force, we have still an argument remaining which is conclusive on this question. Let us suppose, that the old law was imperfect in its character and operation, still it will not be denied that when the ancient types and figures were realized, when the Redeemer appeared on earth to ransom a lost world, he fulfilled the object of his mission by *perfecting the law*. The code which he established was clearly the perfection and fulfilment of the old law. He would be a bold man indeed, who would contend, that the christian code under the new dispensation, as revealed and established by the Saviour, is not perfect in its morality. He came to establish the law, and to rebuke vice wherever it appeared. At no period in the history of man, did slavery prevail to a greater extent or with more rigor, than in the days of the redemption of man. A submissive world bowed at the footstool of the Cæsars, and in every province of the empire, slavery was established. Even in Judea, where the Redeemer himself taught, man was the property of his fellow man. And yet, when the princes of the earth are loudly rebuked, when the hypocrisy of the Scribes and the Pharisees is

exposed, when vice and immorality in all their forms and observances are denounced, He, who came to perfect the law, is silent on the subject of slavery. Are we to be told, that it formed no part of the plan of the Saviour to interfere with the civil institutions of the nations of the earth, and that slavery was protected by the civil code of the Roman empire? We deny the truth of this assertion, and maintain that while the reformation of forms of government constituted no part of the scheme of redemption, yet, in the fulfilment of the law, in the perfection of that moral code which the Redeemer came to establish, there was no civil institution, however fortified by the municipal law, which was immoral in itself, that was not openly condemned. Let us contemplate for a moment the civil institution of marriage as it existed in the Roman empire, which was a species of *domestic servitude* regulated by the civil code, and we will find, that the law of the New Testament designed for the government of the whole human family, radically reformed that institution as it existed among the nations of the earth. To maintain, that slavery, as it existed under the Roman empire, was immoral in itself, and to admit that He who came to perfect the moral code failed to condemn it, is to assail the whole fabric of christianity. As the new dispensation was the labor of infinite wisdom, prompted by infinite goodness, and as it was clearly designed to be the fulfilment and perfection of the law and the prophets, it is preposterous, if not impious, to suppose, that any immoral institution could be tolerated or pass unrebuked by the new law, however strongly fortified it might be by the prejudices of the age or the laws of the land. But the Saviour of men, he whose heart yearned with compassion for the poor and the needy, and the oppressed of the children of men, found upon the earth existing in full rigor the institution of slavery, and he has no where condemned it. If slavery be immoral, why is it the only vice which is not strictly prohibited? It was not condemned, because as it originated in the very NATURE OF THINGS, and as it was of divine institution in the infancy of man, the GOD OF NATURE could not condemn it.

But it will be objected to us, that the mere silence of the Redeemer on this subject is scarcely sufficient to justify the exercise of so high a privilege, as that of holding a fellow-creature in bondage. We cannot admit the force of this objection, because the new dispensation was merely a fulfilment, not a repeal of the old law. The types and emblems of the old law were merged in the new revelation, its rites and observances were superseded, but the decalogue and moral force of that law still prevail. Now, having clearly established the recognition and approval of slavery under the Jewish dispensation by the Creator himself, and having shown that it was not abrogated by the Saviour under the new law, the testimony is conclusive in its favor. But premitting this argument, let us consult the disciples of the Redeemer himself, who proclaimed this law to Jew and Gentile. And in citing the testimony of these disciples we will not confine ourselves to the four first centuries of the christian era, those four centuries during which the men of the seventeenth and eighteenth centuries have allowed the Creator to maintain his church in its primitive truth. Let us commence with the apostles. In the epistle of Paul to Philemon we find these words: "I beseech thee for

my son Onesimus, whom I have begotten in my bonds: which in time past was unprofitable to thee, but now profitable to thee and to me: whom I have sent again: whom I would have retained with me, but without thy mind would I do nothing: that thy benefit should not be as it were of necessity, but willingly." Onesimus was the slave of Philemon, whom he had robbed, and from whom he had escaped. He was found and converted to christianity by the apostle, and afterwards became an eminent dignitary in the church. But besides the recognition of the lawfulness of slavery under the christian dispensation, there are two important lessons which the reverend agitators of the present day may derive from this beautiful epistle. The first is, in the language of Jerome, in his commentary upon this text, that "not even under the pretence of seeking religious instruction are slaves permitted to escape from the lawful dominion of their masters." And the second is, that the apostle himself felt bound to sustain the authority of the master over the slave, and therefore sent him back to his master, although he was exceedingly anxious to retain him for the ministry, which he declares he could not do without the consent of the master. Contrast the christian piety and justice of this apostle, with the conduct of the reverend agitators of the northern states whenever a slave escapes from his southern master, and the difference between true religion and fanaticism is at once perceived. In commenting upon this text, Jerome further observes, that "although the apostle wished to retain Onesimus to minister unto him in prison, yet he restored him to his master, that he might show that in right and justice fugitive slaves should be returned to their masters"—"*ut ostendat servos fugitivos jure justitie hauris suis esse restituendos.*"

And in the epistle of the same apostle to Titus he thus defines the duties of servants: "Exhort servants to be obedient unto their own masters, and to please them well in all things, not answering again, not purloining, but showing all good fidelity, *that they may adorn the doctrine of God our Saviour in all things.*" Upon this passage Chrysostom remarks, "the apostle thus admonishes servants to be faithful to their masters, in order to refute the calumny against the christian religion, that slaves were taught by that creed that after their conversion to christianity, it was unlawful to serve their heathen masters." Again, in the sixth chapter of the Epistle of Paul to the Ephesians we find these words: "Servants, be obedient to them that are your masters according to the flesh, with fear and trembling, in singleness of heart, as unto Christ; knowing that whatsoever *good thing* any man doeth, the same shall he receive of the Lord, whether he be bond or free." Upon this passage Jerome says, that "in the first age of christianity many supposed, that when they were made christians, they were loosed from the bonds of slavery." And in refutation of the error it was decreed by one of the councils of the church: "that if any teach that by virtue of religion or christian instruction that the slave may despise his master, or may withhold his service, or that he shall not serve his master with good faith and reverence, let him be anathema." The same error prevailed in relation to the subjection of wives to their Gentile husbands, which this apostle expressly condemns in the seventh chapter of his first epistle to the Corinthians.

But, we will descend from the apostles to the next generation of christian teachers, for further evidence of the lawfulness and morality of slavery. Ignatius, bishop of Antioch, who is supposed to have seen the apostles, thus writes to Polycarp, bishop of Smyrna: "Let not the widows be neglected. Despise not the slaves, neither suffer them to be puffed up; but to the glory of God let them serve with greater diligence, that they may obtain of God a better liberty. Let them not desire that their liberty be purchased or procured for them by the congregation, lest they fall under the slavery of their own passions." Thus it is clearly established from the old and from the new law, in the infancy as well as in the advanced stages of society, in every age and in every clime, that slavery has always existed, and has been approved, and regulated by the laws of God and man. Slavery therefore cannot be immoral in itself, although like other social institutions it may be shamefully abused. We have then clearly demonstrated the propositions at the head of this article:

1. That slavery is coeval with society, and that it originated in the nature of things and the necessities of man.

2. That it is universal, and has existed in all nations and climes.

3. That it is neither prohibited by the moral nor divine law.

There remains to be established the single proposition, that "Christianity alone by its exalting influence and peaceful and gradual operation can abolish slavery among any people, and that its sudden abolition by any other agency, must necessarily be attended with frightful political revulsions, destructive alike to the bond and free." Christianity is the great agent of civilization and refinement; and its action would be far more rapid and effectual, but for the passions and vices of mankind. Its ennobling influences tend to qualify the slave for freedom, and its gentle spirit of brotherly love disposes the master to kindness; and by its quiet and peaceful operation in the course of time, with the full consent of bond and free, when society shall have attained that elevation and refinement which a christian discipline induces, slavery may be abolished without the aid of the enthusiast and fanatic, and without agitation or commotion.

It was the peculiar folly of the philosophers of the last century, to judge every thing by the rigor of abstract rules, without regard to the salutary lessons of experience. Hence Rousseau commences his Social Contract with this startling maxim: "Man is born free, and is everywhere in chains." He certainly does not speak of man's being born free as a *fact*, because in the same sentence, he declares that he is *everywhere* in chains. He must intend to speak of the *right*, and this it will be somewhat difficult to establish in opposition to the *fact*. It is not true, that "man is born free." In all times and in all places, down to the establishment of christianity, slavery has always been considered as a necessary institution in the government and polity of nations, in republics as well as monarchies, and no philosopher or legislator ever dreamed of condemning it, or of assailing it by the spirit of the laws. Aristotle, one of the most profound of the ancient philosophers, has declared that there were men in the early ages of the world who were born slaves. We well know that this doctrine

has maddened the whole school of modern demagogues, but it is easier to denounce than to disprove it. His proposition is sustained by the whole current of history, which is political experience, and is founded in the nature of man, whose action is history. Indeed, slavery was so generally believed to have its origin and foundation in the nature and necessities of man, that the good sense of all mankind perceived it clearly, and until within the latter centuries, it has never been attacked by reason or the laws. The number of freemen in the states of antiquity was much inferior to that of the slaves. When Athens numbered twenty thousand citizens, she had four hundred thousand slaves. When the population of Rome towards the close of the Republic was upwards of a million, there were but two thousand property holders, which alone shows the multitude of slaves. Indeed, among this people a single individual was frequently possessed of many thousand slaves; and their number was so great that the Roman senate refused to prescribe for them a peculiar dress, from an apprehension that it would stimulate the slaves to rebellion by teaching them their strength.

But it is idle to multiply evidences of a fact so apparent and so generally admitted, as that from the earliest ages of the world slavery has prevailed throughout the globe, and has never been condemned by any legislator, human or divine. But at length the divine law appeared upon the earth, and the heart of man became softened and refined to such a degree as to excite the admiration of every impartial observer. Religion by its chaste and holy influence tended gradually to the amelioration of the state of slavery, not by asserting the violated rights of the slave or the injustice of the master, but by the infusion of a spirit of brotherly love and charity. It was reserved for true religion alone to alleviate the burdens of the bondman; for, no other religion, no legislator, no philosopher, had previously attempted this beneficent labor; neither did they pretend to censure the most rigorous servitude. Slavery, under the Jewish dispensation, had been too deeply rooted, and was perhaps too essential for the welfare of the Israelites, to be entirely abolished; and thus we find the Jewish lawgiver, though supported by the whole power of the Deity, laboring not to condemn or to suppress this institution among his people, but to inculcate kindness and mercy. "And if thy brother that dwelleth by thee, be waxen poor, and be sold unto thee, thou shalt not compel him to serve as a bond servant, but as a hired servant, and as a sojourner he shall be with thee, and shall serve thee unto the year of jubilee. And then he shall depart from thee, both he and his children with him; for they are my servants, which I brought forth out of the land of Egypt: they shall not be sold as bondmen. Thou shalt not rule over him with rigor, but shalt fear thy God. Both thy bondmen and thy bondmaids, which thou shalt have, shall be of the heathen that are round about you; of them shall ye buy bondmen and bondmaids. And ye shall take them as an inheritance for your children after you, to inherit them for a possession; they shall be your bondmen forever." We have referred to this passage of *Leviticus*, not only to exhibit the kindly solicitude of religion to ameliorate the condition of servitude among the Jews—among whom servants were treated more benignantly than by any other people of the olden time—but for the

further purpose of proving the existence of unqualified slavery among the earliest people of which we have authentic history, and of its express sanction and approval by the Deity himself. "Both thy bondmen and bondmaids which thou shalt have, shall be of the heathen that are round about you; and ye shall take them as an inheritance for your children after you, to inherit them for a possession; they shall be your bondmen forever." But christianity, which is governed by a divine spirit, is therefore temperate in its agency; and all its wholesome operations of every kind are gentle and insensible. And wherever we find, either in relation to the abolition of slavery or any other subject, turbulence, violence, impetuosity or vehemence, we may feel well assured that it is the work of crime or folly. Subordination is essentially necessary for the maintenance of any form of government. The popular will must be controlled, under arbitrary governments, by the strong arm of unbridled authority, and in free institutions by the intelligence and virtue of the people themselves. To emancipate suddenly a large body of slaves among any people, before those slaves are duly qualified to receive the boon—to surrender them up to the guidance of their unrestrained will, without any salutary check—is the most fatal blow which can be aimed at the institutions of such a nation. If they are to be no longer restrained by authority, there must be some substitute to control them. Religion alone can either qualify them for freedom, or restrain them in the exercise of its estimable privileges. But the agency of religion is slow and imperceptible; it does not assert any right of freedom in the slave or act upon him alone, but its holy influence pervades every class of society; it elevates the bondman to the dignity of his nature; it refines the master, and by an insensible operation it effects a wholesome fraternity of rights, privileges and immunities. But to effect this desirable end, christianity must be left to its own celestial agency, to its own heavenly guidance. When men attempt to wield this supernatural agent, they transcend their privilege, and the effects which they produce are the fruits of fanaticism. We have already seen that christianity, in its efforts to ameliorate the condition of subject classes, commenced by a wholesome reformation of the state of marriage, which is the most important branch of domestic servitude. Slavery is the grossest and most absolute state of servitude, but it is not the only one. Predial and domestic servitude have always accompanied unqualified servitude, or slavery; and the former conditions have been the stepping stones, by which the slave has advanced in many nations to a paternity of freedom. Among the ancient Romans, the class of freedmen was the link which connected citizenship with servitude, and the gentle influence of literature and science not unfrequently elevated the slave to the rights of qualified citizenship. Many of the honors of the republic were accessible to the freedman, and he had a deep interest in the welfare of the government and the perpetuity of its institutions. So among the Hebrews; the servants, as contra-distinguished from the bondmen, were restored to all their civil rights in the year of the jubilee, and the great lawgiver of this people passed many ordinances for the protection of this branch of servitude. Thus science among the Romans, and religion among the Jews, instead of violent efforts to lift the slave at

once to freedom, from a state of abject servitude, before he was properly qualified to exercise the high privileges of this new station, directed their whole attention to the protection and regulation of those middle states of qualified or limited servitude, which were the only avenues to a peaceful and orderly enjoyment of the rights of citizenship. These middle states were a school of improvement and reformation; they were a form of probation—a civil, political, and moral noviciate—in which the candidates for admission to the privileges of citizenship were cautiously and slowly prepared for the higher order to which they aspired. Thus under the rigor of the feudal system the lower classes were originally serfs, attached to and transferable with the dominion of the soil. But as christianity shed its benign influence over this people, elevating the slave and refining and softening the master, these abject slaves became first predial servants, and gradually by the commutation of services, were raised to the condition of tenants of the soil. But the most sedulous efforts of christianity have constantly been directed to that state of domestic servitude in which man is most deeply interested, and which exercises the most direct influence on his morals and happiness. It is for the "devout female sex," as they are affectionately termed in the liturgy of the church, that christianity has expressed its deepest solicitude. And the inordinate authority of man over woman, or the undue subjection of the female to the male, tends to the debasement of the morals of each. Woman, even when invested with the plenitude of her rights, and when mistress of her own actions, is but too often the feeble victim of the seducements which surround her. How utterly helpless, therefore, is she when her will is not her own! The very idea of resistance vanishes, vice becomes a duty, and man, gradually debased by the facility with which his irregular appetites are indulged, is plunged into Asiatic luxury. It is unnecessary to direct the attention of the reader to the degradation of the female sex in India, or among barbarous nations; the fact is clearly established, that every where, in all nations, and among all people beyond the pale of christianity, woman is deplorably debased. Woman, whose influence over the heart of man is resistless, whenever she is corrupted or debased, revisits her corruption upon man, and thus this pervading influence of the sexes over each other, by a species of mutual contamination, moves from generation to generation in one "vicious circle," from which they can only be delivered by the supernatural and refining agency of christianity. Hence the simplest and most efficacious means of reforming man, is to exalt and to ennoble woman. Behold the wisdom of this divine institution! It acts first upon woman, because from the gentleness and tractability of her nature, she is more susceptible of the influences of this law of purity and love. And when she is thus regenerated, who shall declare the extent of her chastening influence over the sons of the children of men? Under the elevating and benign influences of christianity, she proceeds to subdue, to reform, to elevate, to ennoble, and to perfect every thing around her; and by this supernatural power, she so softens the affections and refines the feelings of the lords of creation, as to dispose them to ameliorate the condition of classes of his fellow beings still more abject. Thus christianity, by commencing with the most

moderate condition of servitude, gradually and peacefully prepares the way for the elevation of the slave. It is only by means of the spirit of charity and good will, which christianity infuses into the heart of man, that slavery can be abolished in any country. But she must be left to her own supernatural agency—to her own heavenly guidance—to her own orderly procession; commencing her amiable work with woman, the least depressed and most influential branch of domestic servitude, and gradually and imperceptibly approaching to unfetter the slave.

Let us recapitulate. Slavery cannot be opposed to the LAW OF MORALS, because it has existed in all ages; because it has been instituted, regulated, and approved in many instances by the Author of nature and morals; because He who came to perfect the old law and the moral code has never condemned it; because it prevailed in its most odious forms under the Grecian and Roman republics, and has never been censured by any of their philosophers, sages, or lawgivers; because the Patriarchs possessed slaves, and were never rebuked on that account; because Moses, although sustained by the power and wisdom of the Deity in framing the Jewish law, did not attempt to abolish, but contented himself with ameliorating the condition of slavery; because the immediate disciples of our Saviour have exhorted the slaves not to be too anxious for their freedom, and have advised the congregations of the faithful not to be solicitous for the purchase of the liberty of the slaves, lest perchance they should fall under the dominion of their sinful passions; because from the institution of man to the introduction of christianity, from the advent of the Redeemer to the present day, slavery has always existed; because slavery had its origin in the very nature of man, in the very nature of things, and cannot be in opposition to natural right; because it was ordained, regulated, and approved in the Old and in the New Testament by the God of NATURE himself.

Perhaps it would be well to close this article here; but let us not despise the prejudices of the infidel and the philosopher, but patiently inquire whether their complaints of this violation of the *natural rights* of man have any foundation. It is somewhat strange, that the world should have acquiesced in this state of slavery for six thousand years, and that it should have been reserved for these latter ages of presumptuous man, to discover that God had instituted, and the Saviour and his disciples had approved, this stupendous fraud upon the natural rights of man. It is stranger still, that the objections should be urged by the infidel, who strikes at the very roots of revealed religion, and by the revolutionist, who, reeling with the drunken inspiration of liberty and equality, aims at the subversion of all established institutions. And it is yet more strange, that the whole theory of crime and folly, which was born of the French revolution, and whose excesses we hoped had been expiated by the torrents of blood with which they had been stained, should in this age, and in this country, be revived and sustained by many of the Northern and Eastern clergy. While this destructive principle approached us in the form of Revolution and Infidelity, the apparition was too horrible to be favorably received; but when it approaches under the garb of Religion, it is high time to examine the claims of these supersanctified pretenders, who, transcending the morality of the scriptures, would

be more MORAL THAN GOD, MORE RELIGIOUS THAN CHRIST!—But let us examine their complaints about the violation of the natural rights of man. The first want of man is life and subsistence. If to obtain these he finds it necessary to renounce his freedom, we are at a loss to conceive how this can be a crime. If a master cannot without ruin to himself, protect the life, or obtain support for the servant, except on condition of perpetual service, we cannot see the injustice of requiring it, nor how a convention of this kind offends the natural rights of man. While the families of men were roving and pastoral, and before the institution of civil society, a slave could not change his master without expatriating himself, nor could a master liberate his slaves without ruin to his family. Slavery was therefore one of those domestic institutions which sprung from the necessities—from the nature and condition of society in its infancy; but it was alleviated by the protection and sustenance which that society afforded. It is said, that contracts of servitude were void for want of consideration; thus committing the common error of regulating these primitive conventions by the artificial rules of modern contracts. But, if an individual be unable to obtain the first wants of nature—that sustenance which is necessary to preserve life itself without renouncing his freedom—surely there is a consideration founded in nature and necessity. And indeed the condition of the slave in the primitive ages was not so utterly debased or hopeless as many have imagined, and the avenues to freedom have never been closed upon him in any age. A slave might, in certain cases, inherit the whole property and dominion of his master. "And Abram said, Lord, what wilt thou give me, seeing I go childless, and the steward of my house is this Eliezer of Damascus? And Abram said, behold to me thou hast given no seed; and lo one born in my house is mine heir. And the Lord said, this man shall not be thine heir; but he that shall come forth out of thine own bowels, shall be thine heir." Civil liberty has only become this inestimable benefit, since it has been protected and regulated by law, and since the means and facilities of subsistence have been infinitely multiplied. Before that happy period, liberty, so far from being a blessing, was a positive evil, unless accompanied with the means of subsistence, servants, and flocks, and herds, and pastures. It is absurd to maintain, that without these means and appliances, domestic or predial slavery was a violation of natural right. And this necessary condition was alleviated by all the feelings of humanity. Holy Job declares that he never failed to render justice to his servants. "If I did despise the cause of my man servant or of my maid servant when they contended with me, what then shall I do when God riseth up? And when he visiteth, what shall I answer him? Did not he that made me in the womb make him? and did not One fashion us in the womb?" Here the just man justifies slavery before God, and inculcates mercy and justice in his government. Moses framed the civil and natural polity of the Hebrew people, and the whole spirit of his code tended to humanize and polish this cruel and stiff-necked generation. Now we know, that whatever changes for the better have been made in the mode of warfare in later times, in his age it was a war of extermination. Was it cruelty or mercy in this great lawgiver to spare the lives of his captives, and reduce them to slavery? And even in our own days, if we were at war with an enemy that gave no

quarter, would not retributive justice, would not the law of retaliation impel us to revisit his cruelty upon himself? And if instead of bloody reprisals, we should elect to reduce them to captivity, would they have any just cause of complaint? Reason and religion teach us the obligation of treating slaves with humanity, and to ameliorate their condition as far as is compatible with the maintenance of discipline. This is what has been done by the law of Moses and by the law of the New Testament, and this is what has been inculcated by the most humane and wisest of the philosophers of antiquity. Placed at the head of a nation which went forth to conquer sword in hand, in the midst of a people among whom slavery was an established institution, in a state of society in which there was no liberty but for those who had dominion over the land, Moses could not abolish slavery, but he enacted salutary laws for the merciful exercise of the power it conferred. In the twenty-first chapter of Exodus, and in the twenty-fifth chapter of Leviticus, we find the amelioration of the condition of slaves among the Hebrew people. Now it is apparent, that under the influence of religion, slavery was much less rigorous and less liable to abuse among the chosen of God, than among any other people known to us; and the texts, to which we have referred, clearly indicate not only the lawfulness and morality of this condition of a portion of the human family, but also prove that the immediate abolition of slavery is neither required by the sanctions of religion, nor the principles of a well ordered philanthropy. Armed with the authority of Moses, what more would have been done by those philosophists and avengers of the natural rights of man, who in their misguided zeal, would subvert the wisest regulations, and reform the institutions ordained by the God of nature himself? It is absurd to declaim against slavery, as it existed in the olden time, upon those notions of liberty which prevail at the present day, for this liberty had no existence previous to the introduction of christianity. And how ridiculous is it, to have required of Moses to establish among the Jews a species of freedom, which was directly opposed to the physical and moral condition of the age in which he lived! We turn in vain to the refined and polished nations of antiquity, to the institutions of Greece and Rome, for those merciful regulations of slavery which were prescribed to the Hebrew people.

Our northern brethren attribute much of the principle of slavery in the southern states, and of the opposition to emancipation, to the prejudice of color. It must be admitted, that the color of the African presents an insuperable obstacle to his emancipation and admission to the fraternity of social and political rights. The African can never blend with the Anglo-Saxon, until the Anglo-Saxon be debased to a level with the slave. But let us be careful how we magnify this difficulty, and attribute to it effects springing from other causes. At Athens, the freedmen were called bastard citizens; and both the Athenians and the Romans would have considered themselves dishonored by eating at the same table with their slaves. To admit them to the rights of hospitality, they were compelled to manumit them. There were but three days in the year in which the ancient Romans recognized the modern doctrine of fraternity, liberty, and equality; there were but three days during which the infidels, and agitators, and disorganizers of the last and of the present century could have desired to behold. For, it

was only during the festival of the Saturnalia, when reason was silent, and when revelry, riot and debauchery prevailed, that the order of society was disturbed, and the slave was admitted to all the privileges of the freeman. But if these ancient people would have held themselves dishonored by mingling upon terms of equality in social intercourse with their slaves, then a similar repugnance in the people of the southern states must spring from the very nature of slavery, and must be more deeply seated than in the prejudice of color, though this latter cause may render the feeling more invincible.

NEW VIEW OF THE TIDES.

We see and we acknowledge the vast improvements which have been made in the arts and sciences within the last half century. In these improvements the Americans have signally participated; and can it be now said, with any degree of propriety, that any one has reached the limit beyond which none can penetrate into the fields of improvement and discovery? Or, that all that can be known, is known?

But the cause of the Tides is now the question. I will, however, here make a short reply to an objection made to my "Views of the Solar System." The objection comes from a distinguished source—a *professor of mathematics*. He says, "your views cannot be correct, as no possible velocity of the sun can be made to correspond with the *different velocities of the planets*." This is very true, if the velocities given to the planets by the European mathematicians are to be made the test. But these velocities my views reject. We see that the velocity of Jupiter's moons corresponds exactly with the velocity of their primary, and so it is with the planets in relation to the sun. Suppose we had an additional moon, could either have a greater velocity than the other? The inner moon, in consequence of the *greater contraction of its orbit*, would make more revolutions round the earth than the outer one, and would *appear* to move faster, (like the inner planets,) but it would make no greater progress than its associate. The progress of the earth would limit the progress of both. This is so evidently true, that I felt some surprise that any one would attempt to accommodate the heretofore supposed different velocities of the planets to any given velocity of the sun. The sun limits the velocity of the planets, precisely as Jupiter limits the velocity of his moons. Some notice of the heavenly bodies has existed for thousands of years, and much of the phenomena has been recorded, and there has been no variation in the bearing of the solar system during that time—Mercury performing his hundred periods, while Saturn performs one,—and they are now in the same relative situation they were at least 3000 years ago. The *progressive* motion of the sun at once settles the question as to the different velocities given the planets. But independently of this, if we even suppose the sun a stationary body, it can be demonstrated from their *times*, that no one of them has a greater velocity than another. As to this question, a travelling sun, or a stationary sun, it makes no difference at all. They all pass and repass the orbit of their primary, as our moon passes and repasses the orbit of the Earth, and all describing orbits concave to the

centre, perhaps, of the universe, just as our moon describes an orbit concave to the sun. This description of orbit excludes the whole idea of centripetal and centrifugal forces, as now applied to the planets and their satellites. The planets move faster than the sun, the satellites faster than their primaries—all being electro-magnetically bound together. The sun throws off the planets, and the planets their satellites, as one magnet throws off another. This resistance between the sun and the earth, and the earth and moon, gives rise or rather produces that phenomenon we call the *Tides*. When we observe one magnet throw off another, we see that there is resistance, and that it is evidently *pressure* that produces the effect. Now the *pressure* of the moon upon the surface of this globe is less, as the moon moves from her conjunction to her opposition, and greater as she moves from her opposition to her conjunction. Any one acquainted with the true nature of the moon's path, will see at once the reason of this difference. As the moon moves in the rear of the earth, from her change to her full, she is in fact following the earth; but as she moves from the full to the change, she is forced ahead of the earth, and both moving to the same point in the heavens; the earth here drives the moon out of her way, and of course, the resistance will be increased, and hence the tides will rise higher than they do, when the moon is following the earth from conjunction to opposition. It is the motion of the sun that gives ellipticity to the orbits of the planets, precisely in the same way that the motion of the earth gives ellipticity to the orbit of the moon. The sun drives the planets out of his way, just as the moon is driven out of the way of the earth. This not only increases the resistance; it also brings them nearer together through the elasticity of their respective electro-magnetic spheres. The little system which we recognise in Jupiter and his moons, when fully understood, must be our guide as to the mechanism of all other systems, whether great or small. A diagram representing truly the orbit of Jupiter, and the paths of his moons round him, will be, in miniature, a perfect representation of all the systems in the universe. No one sun, no one planet, nor satellite, ever describes an orbit which returns into itself. They all describe orbits concave to the grand centre of the whole.

As to the story of the apple falling from the tree to the earth, no just inferences could have been drawn from that phenomenon, until it was shown that the moon existed under the same circumstances in relation to the earth as did the apple. We see that the moon has been acted upon by some agent which has given her sphericity, and we also see that she is not altogether undisturbed in her path. We see further, that this disturbance must be the result of action and reaction, and just such an action and re-action as we observe in the electro-magnetic phenomena.

It will be admitted, that our circle of atmospheric air closely invests and equally presses the whole surface of this globe, and that this air, when in motion, raises tides as well as the moon. But can it raise tides without rendering the *pressure* upon the convex surface of the ocean *unequal*? The winds do not *attract* the water. Now, the moon raises tides in the same way that the winds do—by depressing the convex surface of the water under her—and it is well known, that water will yield to the slightest impulse, and of course, they will swell up on each side of her, north and south,

and parallel with her path. (The reader will here understand, that it is the rotary motion of the earth from west to east, that gives to the moon the appearance of moving from east to west.) Those who are acquainted with the sphericity of the earth and waters, with very little reflection, will see that such swellings or elevations of the water on each side of the moon, cannot be produced but by their depression and displacement under the moon. The whole of the phenomena, the results of the moon's action upon the convex surface of the water, enters directly into the demonstration of this one fact, that the moon does *depress* the convexity of the water under her.

It is universally admitted—it is indeed admitted in the European theory of the tides—that wherever the moon is vertical to the oceanic waters, they are *depressed*, and it is there low water, and high water every where else. The far-famed French mathematician (La Place) discovered, that when the moon is in her position south of the equator, the water rises higher in *northern latitudes*; and when the moon is north of the equator, the water rises higher in *southern latitudes*. He supposed Brest, in France, to be the best position on the globe for observing the true nature and the true cause of the tides. Then it may be presumed, that he made this discovery at that place. He knew also, that when the moon is vertical to the western coasts of Europe and Africa, it is all along these coasts low water; and that when the moon has passed on fifteen or twenty degrees over the Atlantic, then the water rises on these coasts, and plainly, because the moon had *pressed down* the convex surface of the water, and drove it north and south of her position; but as she passed on, the water regained its convex level, and of course, it was again elevated upon these coasts under the pressure, I will here say, of our circle of atmospheric air. Then La Place, as a reasoning man, and as a philosopher, ought to have given these facts their true bearing upon the tidal phenomena. But this he could not do, because it would have overthrown at once almost all that he had written concerning gravitation and the mechanism of the heavens.

The European *attractionists* say, the moon *draws up* the water under her; but a little reflection would have convinced them that such a *supposed drawing up* of the water, would, if true, have been destructive of one of their leading principles. They say their *attraction* diminishes as the distance increases; and to say that the moon draws up the water of our globe, is to give to the moon a greater power over our oceans than they give to the earth itself. Some of them say the water directly under the moon *falls* toward the moon, and this they call gravitation; and that the water in the opposite hemisphere recedes from the moon, her attraction being less in that hemisphere. But to clear away these opposing facts to the truth of their theory, they say the water does not rise immediately under the moon, it requiring some time for the action of their *attraction* and *gravitation*—and, therefore, the water rises after the moon has passed, and then follows the moon from east to west, regardless of the fact, that upon their own shores, and of which they had ocular demonstration, the water was flowing *from* the moon, and not *towards* the moon. The truth is, the moon influences the water in the same way that a ship does. The ship gives an impulse to the water as she advances, and it is elevated in front and on each side of her; and

as she progresses, the water in her rear closes in and regains its convexity. Now, when the moon depresses the convex surface of the water of the Atlantic, the swell will be in the Pacific; and when it depresses the Pacific, the swell will be in the Atlantic; and really there is but one tide each day. But our continents obstruct the flow of the water from east to west, and this circumstance gives us the appearance of two tides in the twenty-four hours, when in fact, there would be otherwise but one tide and one ebb in the same time. This appearance has no doubt greatly misled the philosopher in his researches concerning the true nature of the tides.

If we pass on to the western coasts of America, we shall there find the same phenomena as exist on the western coasts of Europe. When the moon is over this coast it is also low water, and does not begin to rise until she has passed fifteen or twenty degrees over the Pacific, and there rises on each side of her, flowing northward and southward, and which is proved by the fact, that the water now runs through the straits of Magellan into the Atlantic, and through the straits of Bhering, so as to reach the mouth of the Copper Mine river, as reported by that veteran traveller, Hearne, I think. Here the tide or high water is kept up for twelve hours, and in the straits of Magellan they have high stationary water for six hours, independent of the flux and reflux, first from the Atlantic and then from the Pacific, according as the moon is over the one or the other. When the moon is over the Atlantic, the water runs for three hours through these straits into the Pacific, and when over the Pacific it runs through them three hours from the Pacific into the Atlantic, and then remains six hours high stationary water. Now I ask is it possible, that if the moon *draws up the water under her*, that she can thus produce and sustain the phenomena which takes place at these two positions on the globe, as she passes over the Pacific ocean? Then, as she approaches the eastern coasts of Africa and Asia, the tide rises very high on these coasts, particularly at Babelmandel. Then the highest rise of the water on these coasts must be at least six hours before the arrival of the moon, as wherever the moon is vertical to any place, it is invariably low water. Here then we have full demonstration, that the moon not only elevates the water on both sides of her, but elevates it also before her; and, from the high tide in the bay of Panama, she must drive the water back as she passes on; and when the water ebbs at Panama, it will rise at Babelmandel—the moon being, I may here say, ninety degrees from each place. But as the moon approaches the meridian of Babelmandel, the water will fall there, but continues its elevation on each side, as at Tonquin, and in the straits between Madagascar and the African continent. The tide continuing so long up at Tonquin, gave rise to the notion, very strangely indeed, that two tides met at that place. As to the idea of the moon drawing up the water under her, or drawing it after her, it is difficult to conceive the source or phenomenon from which such an idea could have been derived. I cannot discover in the whole of the oceanic phenomena, as given to us in any theory of the tides, a single fact that would justify it, or give the slightest support to such an idea.

But with the tides are connected the winds, or rather the motion of the tropical portion of our atmospheric air, with the current of the tropical waters from east to west. Then, as the fact has been stated, and which

is admitted, that when the moon has passed the western coasts of America, the water rises on these coasts—the moon evidently driving the water from her position eastward, and it being intercepted by the land, will rise high on these coasts. But the moon having passed on ninety degrees, the water recedes from this coast, moving westward, as though following the moon; the pressure of the moon being removed, the water now regains its natural convexity. It is very evident, then, that this receding of the water, following the moon from east to west, will be continued very uniformly until the moon has passed entirely over the Pacific; and the same state of things will exist, as the moon passes over the Atlantic. The convex surface of our elastic circle of atmospheric air, will be depressed in the same way, and with the same effects as is the convex surface of the water—the elasticity of the one and the non-elasticity of the other, constituting the difference as to effect and appearance. There will, therefore, be a current of air similar to that of the water, following the moon from east to west—and but a very few rotations of the earth, under the *pressing* influence of the moon, would give a steady permanency to both currents. But the heat generated by the action of the sun upon the continents, which increases the elasticity of the air, will interrupt the aerial current, and produce adverse movements. No degree of heat less than *steaming* will affect the water; but a small degree of heat will greatly affect atmospheric air, and produce effects not readily calculable. Instead of the water following the moon, as taught in the books, it is regaining its convexity under the equal and direct pressure of our sphere of elastic air, which convexity had been broken down by the pressure of the moon. Hence the moon drives the water to the east of her position, as seen on the western coasts of America; and she drives the water also to the west, as is shown on the eastern coasts of Asia and Africa; and when her influence is removed, the regular pressure of the air forces it into its natural convex figure, and this action or pressure of the air will continue round the globe, driving the water after the moon—and hence the currents of air and water westward, as noticed by navigators.

We know of no other agents having direct action or pressure upon this globe, except those bands of elastic matter by which it is evidently invested, and the moon which attends it. The influence of the sun belongs to other considerations, which are not now to be noticed. The moon breaks down and displaces the water under her, and when that greater force or pressure is removed, the pressure of the air again gives to it its natural sphericity. These are the only agents engaged in producing the phenomena we call the tides; and that they are abundantly adequate to produce the phenomena, there can be no doubt. Then admit that the moon does actually press upon and displace the water under her, does it not follow that something more than a depression of the water's surface would result? Can any thing be more reasonably expected, than that the rotation or axillary motion of the earth, so pressed upon, would succeed to such a pressure? And can any other reason be given, why the earth should have such a rotatory motion, as we know she has, and the moon not? It is said, that neither of Jupiter's moons has axillary motion; and they certainly have been revolving round their primary long enough to have acquired it, if it could be acquired without such a pres-

sure as the earth receives from her attendant. The more rapid motion of the moon must necessarily throw the pressing force invariably upon the eastern section of the earth, and she must revolve in the direction of that force, from west to east. This, a slight knowledge of their orbits and different velocities, will be sufficient to test the facts, and without my prosecuting the inquiry any further at this time. I will, therefore, only now remark, that some astronomers say Venus revolves on her axis once in 24 days, and others once in 24 hours; but Herschel says, he could not discover that she had any rotatory motion at all—This is no doubt the truth of the case; for, if she has no moon to give her rotation, she will revolve as the moon does, and during one-half of her period one side will be involved in darkness, and the other half, the other side, will be subjected to the full blaze of the sun. But to show the entire insufficiency of our astronomers' *gravitations and attractions* to produce such effects, belongs to another place and to another time.

The Copernican scheme or system, as it has been delineated, explained and defended, has greatly misled the scientific as to its mechanism, and the mechanism of all other systems throughout creation. It has been treated as an *insulated system—the sun a stationary body*. Down to the time of Dr. Wilson of Glasgow, Scotland, there appears to have been not even a hint that the sun might be a *progressive body*. The astronomers preceding this period seem to have been exclusively engaged in hunting up forces suited to the orbits of their planets *round a stationary sun*; and when they supposed they had found such forces, then they were principally employed in defending them against those who could not understand the *modus* of the action of such forces, until finally it was agreed that the system itself was perfectly understood, and their forces infallibly demonstrated to be the true forces, and the only forces which could sustain and perpetuate such a system as they imagined to exist; for the system, as taught by Copernicus, was not the true system as it existed and as it passed from the hands of its Creator. They had the system of Jupiter and his satellites before them, though they seem to have taken no account whatever of the nature of the orbits these satellites described round their primary. If they had put a proper estimate upon the phenomena fully presented by Jupiter and his retinue of little worlds, they would certainly have discovered, that if their forces were suited to bodies revolving round a *stationary sun* or centre, they could not be suited to bodies revolving round the *progressing* Jupiter, or our *progressing* Earth. Now, as to such forces as our astronomers have applied to orbits round a *stationary body* returning into themselves, it is very evident from their own calculations and demonstrations, that they are suited only to such orbits; then there being no such stationary body, and of course no such orbits in creation to which they could be applied, such a stationary sun, and such orbits, could have existed only in their own imaginations. The mechanism of Jupiter's little system gives us, as I have before remarked, a conclusive idea of the mechanism, not only of the greater system of our sun, but of all the systems composing the universe; and a little reflection will serve to convince us, that if there had been no matter in a state of elasticity, there never could have been any *motion* regularly established. Our own motions depend upon the elasticity of our own muscular system. The very disturbances or per-

turbations of the planets in their paths, show conclusively that they are influenced by matter in a state of high elasticity, as no planet can disturb its own motion, unless it had a mind and muscles through which to effect it, and also a system of nerves for the transmission of its will. The same instrumentality by which the planets are moved in their paths, gives rise to that disturbance which has been observed by the practical astronomer, when an inner planet passes an outer one. This disturbance is produced by the interference of their electro-magnetic spheres.

When La Place had ascertained the fact, that as the moon passed over the Atlantic, it was low water under her, and the swell was on each side of her, north and south, and the farther from the moon the greater the swell, is it not a little strange that he should have come to the conclusion that the moon was *drawing up* the water towards herself? Now, whether I shall finally be found either right or wrong, I shall endeavor to ~~write up~~ American philosophers from the bewildering effects of the opiates administered to the scientific world by the mathematicians of the last century.

It is evident, it cannot be questioned, that Jupiter's moons describe orbits round their primary, invariably concave to the sun, and it is equally evident the phenomena demonstrate it, and equally so do the intuitive recognitions of the mind, that the planets describe the same kind of orbits, and equally concave to some more distant centre, around which the sun himself is describing a similar orbit. Now, the only difficulty which lies in the way of ascertaining the true distance of each planet from the sun, consists in ascertaining the true distance of the moon from the earth, or the diameter of our rotating planet, including its band of elastic matter rotating with it—the planet occupying the centre of this revolutionary band, and which acts directly upon the planet, and not the planet upon it. This elastic sphere of matter carries the planet in its course as it revolves round itself and round the sun, describing just such an orbit as the moon describes round the earth. I know I am treading on unbeat ground; but that is far from being a sufficient reason why I should not proceed. Pioneers are as necessary in science, as they are in opening and levelling roads. It is true I am but a volunteer, and that too without any authority whatever from those who might, in the opinion of some, be considered as constituting a legitimate authoritative source. It is said the planets are "*deflected* towards the sun, and the moons towards their primaries;" but to show how they are *reflected*, if I may use the word, and kept at their appropriate distances, is now the question. The *projection* of the mathematicians will not do—that would have thrown them all together, and we should have had a "*crush of worlds*" the first revolution that was made by the planets and their satellites.

WRITERS.

The thoughts of many writers remind one of dances—they are extremely well dressed, but then they have the slight misfortune to be brainless.

Hesperian.

BENEVOLENCE AND MODESTY.

AN ESSAY.

By the author of "Adventures of a Bachelor."

A modest, benevolent face may be compared to a cupboard without a lock—a repository for speculation, invitingly open to every greedy cormorant, and as little respected when rifled of its contents, as a swine trough, into which the animal's snout is thrust at first, but as the contents diminish, the whole of its body is inserted. A modest man should always be poor; if, for no other reason, only to disappoint the ravenous sharks who know not the virtue. A mild, open countenance may also be compared to a ripe pear, hanging over the highway, a mark for the slings of every passer, and exposed to all the ill winds that blow. Pie upon it! we are taught to cherish it, and find too late that we have nourished a viper. It might be a valuable virtue, if all, or even a respectable portion of mankind harbored it: so would there be no necessity of closing our doors at night if all men were honest. These reflections were engendered one fine sabbath morning after setting out for church. It was a most lovely day in autumn, inspiring, even in the city: there had been one or two frosts, that paled the leaves on the lindens before the door, and now the sun shone out clear, mild and invigorating. It was natural for a complaisant smile to rest on my lips, as I descended the snow-white steps of my boarding house, and joined the throng of pedestrians, which increased in numbers as we approached the vicinity of the time-honored edifice. The aged man tottered along the same walk he had traversed in childhood; and the young and joyful wended the same road, whilst few of them, it may be, entertained many thoughts of death and the grave hard by. Near one of the fluted columns of the splendid granite "temple of the Lord," seated on the cold steps, with a crutch in one hand and a rusty wool hat in the other, was stationed a cadaverous old beggar. Now, thought I, will be practised the holy charity, on the threshold of the holy house, where the holy precept is taught. As the crowd swept in I found myself standing before the mendicant.

"Well, my good man," said I, "you have doubtless reaped a full harvest, this delightful morning."

"Behold," said he, "my treasure." I looked in, and found only some half dozen coppers. "But you," continued he, holding up the hat, "have the right kind of face, and the moment I saw you I knew my little store would be increased." I am sure it was a natural impulse, and not his practiced flattery, that induced me to contribute, for my pocket was already delivered of its little mite, set apart for the church, before he was half done speaking.

"Heaven bless your generous countenance!" continued the old man, looking me steadily in the eye, "it will be a treasure for you in heaven, but on earth you will find it a curse, and I would advise you to dispense with it as quick as possible." Struck with the singularity of his remark, I was rivetted to the spot in astonishment.

"Why should you form this conclusion, and tender such advice, my friend?" I inquired.

"Were this a fitting place I would tell you; and if you really wish to hear me, you can do so by accompa-

nying me to one of my haunts. I will soon be compelled to leave here."

"I will go with you," said I, "and substitute your lessons for the sermon. But what will *compel* you to leave here?" Just then my remarks were abruptly broken off by the intrusion of a red faced gentleman, who, with an air of uncommon importance, placed his foot under the mendicant, and forced him to rise.

"Stop! you impudent scoundrel!" said I, interfering, on recognising the intruder to be the sexton.

"Never mind," said the beggar, laughing, "I am willing to exchange this stand for any other, as far as profit is concerned." And when the old fellow hobbled off, I followed him.

"Now," said my companion, when we were ensconced under an awning on the wharf, where an old woman, whom he informed me was deaf and dumb, kept cakes and apples for sale, sat dosing by, "I will tell you why you should dispense with your generous and modest face. Genuine modesty comprehends more than mere inoffensive diffidence: it is the radiant *plus ultra* of nature's alchemy, formed of all the most valuable particles of the soul, and consequently only fit for heaven."

"My dear sir," said I, "you put it all to the blush! You tell me to my face that I possess this rare compound."

"I do say it," he replied, "and instead of a grateful blush, a tear of regret would be more appropriate, unless you retire from the world and live a hermit's life. You would then be beyond the influence of the vices of the world, and, instead of having your virtues preyed upon by the vicious, you might enjoy the treasure which God has endowed you with in peace. Vice and virtue are antagonist qualities, and as there is ten-fold more of the former on the earth, so when they come in contact the victory is to numbers: therefore it is wisdom to keep them asunder, or if they must mingle, it is prudence to dispense with the semblance of the latter, as a soldier does the badge of his country, when surrounded by the enemy."

"This is most extraordinary!" I exclaimed.

"I am perfectly aware of that," replied my companion; "and, if you will give me your attention, I will briefly relate some of the incidents of my life." Unhesitatingly assenting, and signifying great curiosity to know his history, he threw aside his crutch, and leaning back against a keg on which I was desired to sit, he thus began:

"I was the only child of humble parents, who lived by keeping a small flower garden near the city. I was sent to school when very young, and was distinguished for my learning and bashfulness. At the age of thirteen I was left an orphan—both my parents dying the same day; being swept off by an epidemic. I was now the inheritor of a few hundred dollars, and might have continued my father's business successfully, had it not been for my constitutional infirmity, *modesty*, which ever prevented me from bustling with my fellow men and pushing my fortune. I hired myself to a neighboring gardener, and for several years led a contented life: but the fairest flower, the one with which I was most delighted, was the gentle Rosa, my employer's daughter. Long I loved her; and the passion was mutual. She delighted to descant in my presence on the various sig-

nifications of the plants—and, at parting, she would pin on my breast the one which was the badge of love and constancy. Yet the curse of timidity hung over me! When the time arrived for me to act, when it became necessary for me to declare my love in words, and solicit her hand, my tongue refused its office, and I construed her silence and coyness into a rejection; and without seeking another interview, I fled to the city. Here, amongst strangers, whom I had not confidence to ask for employment, nor firmness to deny my purse to any, I was soon left destitute. When on the borders of despair, and wishing that some friendly dispensation of Providence, would take me from amongst the living, a war was declared, and I gladly shouldered a musket in the defence of my country. In the first conflict, urged more by a reckless desire of death, than impelled by a sense of duty, it was my fortune to distinguish myself, and receive the particular commendations of my officer. But in the next action I was made a cripple for life, fell into the hands of the enemy, and when I awoke from a long delirium I found myself in a hospital in England. They had evidently taken me for one of their own party, of the same name, who, I supposed, had perished in the battle. I told them who and what I was, and soon found myself abandoned, in a strange land, without money, and unable to work for a living. For years I pursued the occupation of a beggar, hoarding up my savings to return to my native land. I now thought of my faint-heartedness, and felt certain that Rosa would gladly have been mine, had I only pressed my suit! Aye, the bitterest sting of modesty is the conviction of calmer moments, that it has been hopelessly ill-timed, and could so easily and profitably have been dispensed with! I called several times on our minister, but paused at the threshold, and never had the heart to see him, even when he had granted an audience. At length a humane captain gave me a passage in the steerage, and when I again set foot on this wharf, I hastened to Rosa's garden, determined to try my fortune once more, even under more unfavorable circumstances than formerly. I saw her from a thicket of shrubbery, culling flowers as usual, but several prattling children were round her, calling to 'mama!' I turned, and fled away.

"I learned that the wounded of the late war were entitled to pensions, and I repaired to the war office to assert my claims. The functionary looked at the list, stared me in the face, and thrust me out, saying *I had been paid* only the week before. In vain were my protestations to the contrary. I was shown my name (it was that of the Englishman!) on the pension list, and was assured that I had regularly received my pay for years! Again I fled back to this city, and pursued the mendicant's occupation. Another had usurped my name, and taken my pay, and I was a bashful outcast—brow-beaten out of my own identity—a victim of MODESTY!

"This, young man, is a portion of my history. My profession has made me a good judge of faces, and I advise you to throw aside your benevolent modesty as soon as possible. To-day I singled you out from hundreds; and, rely upon it, your want of assurance may prove the greatest curse of your life. What have you done to-day? Your yielding disposition has caused you to be guilty of profanity and sacrilege: with the

most laudable purpose you left home; but instead of listening to the pious admonitions of the parson, you are in the company of swearing sailors and drunken ruffians—this is profanity. You put aside a few pennies for the support of christianity, and they are in my hand!" Here my companion laughed and jingled the money in his hand—"And this," he continued, "is sacrilege."

"Snap, you're mad to carry on so, now. Get rid of him." This was spoken by the old deaf and dumb woman. At the same instant my companion ran off, with all the nimbleness imaginable, leaving his crutch behind! I was astounded and stupified. I gave the old hag, who was chuckling at my bewilderment, a hasty glance, and set out in a deep study for my lodgings. "If this be madness, there is method in it!" I involuntarily quoted, when I reached my lodgings and found myself minus a *fine gold watch*! Reader, this was a lesson with a vengeance! Would it not be well to remember it?

L. L.

STANZAS.

FROM A LADY'S PORT-FOLIO.

Oh! ask me not to breathe the strain
Of earlier, happier days;
To strike the long lost lyre again,
To gay and gladsome lays.

For ah! life's beauty and its pride,
Its freshness and its light,
Have fled, and little left beside,
But weariness and blight.

They rise, fond mem'ries of the past!
A bright and hallow'd train;
And sadly o'er my pathway cast
Their shadowy joys again.

But trust them not! Hope's wreaths are bound
Of fading, earthly flowers;
Flowers, that alas! are only found
To bloom in summer bowers.

For winter comes, and o'er their skies
Its storms and tempests roll;—
Their bloom is fled—but canker lies
Deep in the shrined soul.

Then call not thou my spirit back
To these frail things of clay,
To seek again the wonted track
Of pleasure's flowery way.

But let me rather turn from all
That binds my being here,
And bows it 'neath the dreamy thrall
Of time's enslaving sphere—

And seek those never failing streams,
That faith's pure fount supplies;
That hope which o'er us kindly beams,
To light us to the skies.

Then ask me not to breathe the strain
Of earlier, happier days;
To strike the long lost lyre again,
To gay and gladsome lays.

L. L.

LUCILE—A NOVELETTE:

BY THE AUTHORESS OF "THE CURSE."

(Concluded.)

CHAPTER XII.

Poverty is the only burden which grows heavier from being shared with those we love.

Scenes from the German of Jean Paul.

"My faithful one!

What thou hast been to me! This bitter world,
This cold unanswering world, that hath no voice
To greet the heavenly spirit—that drives back
All birds of Eden which would sojourn here
A little while—how have I turned away
From its keen soulless air, and in thy heart,
Found ever the sweetest fountain of response,
To quench my thirst for home!"

In the meantime what had been the fate of Grey and Lucile? Ah, what pen may paint the sufferings of the proud and shrinking spirit reduced to the necessity of struggling with the debasing, wearing cares of extreme poverty? Ill health had been added to the other sufferings which Grey had to encounter: neglected, unappreciated where he had hoped for patronage and support, his spirit was crushed—the pride of genius and talent was bowed to the dust; and he saw no refuge for himself and the gentle being who soothed and comforted him—whose voice spoke of hope, when the shadows of fate appeared to throw their most sombre folds around them—for him, for her, with all her beauty, nobleness, and devoted affection, the grave seemed the only refuge, and at times his soul yearned for repose in the "green and quiet mother earth," which offered the only rest his wearied spirit might hope to attain.

"When I am gone, perhaps her father will again take her to his heart, and in time she will learn to view our past as a hideous dream, linked with memories which sear the heart and blast the promise of youth. If not, she must perish with him whose baleful love destroyed her, and at last our rest will be unbroken by that frightful phantom, want. Oh, God! can it be that I have brought her to this!" and with the excitement of fever his eyes would wander over the miserable apartment they now occupied.

Grey had gradually withdrawn himself from all intercourse with the few acquaintances he possessed—his pride shrank from allowing them to witness the poverty to which he was reduced. The severity of the climate had proved too great for one who had been reared in the tropical regions, and when the second winter of their sojourn in Philadelphia set in, his symptoms grew alarmingly worse. As his health declined, Lucile saw the necessity of making some exertions herself, to obtain the very means of subsistence. It was then that she felt most bitterly how utterly unfitted she was to encounter the difficulties which surrounded her, with a hope of overcoming them. She examined her own resources, and any heart less filled with idolatrous affections for her husband, would have despaired. She had been expensively but superficially educated; she had been taught to do nothing except fine needle-work—in that she excelled, and she fondly hoped to obtain enough to employ every moment of her time that was not devoted to Grey. The winter was verging to its close—their

stock of money was entirely exhausted—the jewels of Lucile were already gone, and in spite of her exertions, they were getting in debt to the people in whose house they lived. Grey continued to paint, even when the languor of disease almost unnerved his hand, and his bending figure appeared unable to support itself; but it was more from the love of his art, than the hope of obtaining any equivalent for his labors.

The faithful Agnes had at the earnest request of Lucile hired herself to an invalid who was about to travel for her health, and in the whole world she appeared to be the only being who had not abandoned her former mistress to her gloomy fate. Lucile was deeply touched by receiving proofs of the continued devotion of the girl, who regularly got her present employer to write to her dear young lady, enclosing the half of her wages, as an equivalent for the loss of her services. For a long time the sums thus sent remained untouched, to be restored to their rightful owner on her return; but necessity at last compelled her to use them, with the determination, that if fortune ever smiled on them again, they should be returned four-fold to her who offered them.

The day was intensely cold;—the snow lay piled up in the streets where it had been shovelled from the pavements. Sidney was shivering over a few embers, while Lucile with a heavy heart was preparing to go out, and the poor girl sighed as she looked on his wasted form, then at the bare floors, and uncurtained windows of their cheerless abode. She thought of their own sunny clime, and contrasted it with the feeble rays of sunshine which struggled through the clouds, and occasionally lighted the desolate apartment. Yet she chid herself for such thoughts—"Rather should I thank Heaven that even this shelter is left to us, and we are not yet homeless in this strange land," she mentally murmured, "Oh, my father! could you see your once adored child now struggling with poverty and want, would you not relent and receive her again?"

Sidney turned and looked at her.

"You are not going out on such a day as this, Lucile? My own love, it is too cold: this freezing wind will chill the current of your life."

"Oh, I do not fear it," said she, with a smile. "I am well and strong, dear Sidney, and this wind only makes me feel how invigorating are the fresh cold breezes of winter."

He shook his head. "Is that a form to brave the blasts of a northern clime? Alas, alas! to what have I brought you, beloved Lucile! Here am I, helpless, powerless, dying, while you thus make a slave of yourself, toiling, suffering for me. Oh God! 'tis too much!" And he clasped his hands over his eyes to conceal the burning tears that fell on his breast.

He felt a fond arm wreathed around his neck, and a gentle hand parting the tangled clusters of hair from his brow. "Sidney, my own—own love! why will you wring my heart by speaking thus? Would I not far rather be here, even as we are—sustaining, comforting you, as I am—than in the proud halls of my father, wedded to him I loved not? Oh, speak not of dying—I cannot bear it—I should then be alone—alone, utterly bereft of all that makes life dear. You are ill now, and melancholy; but spring will soon be here, and its balmy breath will restore you to your wonted health. Speak not of death—separation—"

"Poor—poor girl! can you delude yourself into the belief, that spring will bring with it health to this worn and feeble frame? Could I once more see the home of my childhood, with its bright sky above me, its fresh green earth beneath my tread, methinks this deadly languor that creeps over me daily, would be dispelled. Oh Lucile—Lucile! mine has indeed been the life of the visionary dreamer: my dreams were mere fantasies, but the bitter and stern realities of life are killing me; and I have dragged you from your home to dwell in this wretched place, the partaker of my hapless lot, and, oh, my adored, its only solace: without thee, what would be my fate?"

Lucile was weeping bitterly. All the horrors of her lot were revealed to her! Him she had abandoned her father to wed, was dying before her, a victim to her rashness. Had she remained with her parent, Sidney had not met with such a fate. He would have remained in his adopted land, beloved, assisted by her father; but her consent to become his, had doomed him to die among strangers, and amid the bitter struggles of penury. Yet if her's was the fault, her's also was the punishment; for what were his sufferings to those of her who watched over the fading form, saw the eye each day lose a portion of its fire, the spirit of its elasticity, and yet was denied the privilege of weeping, even when the strong hand of agony was laid on her heart. Her brow must be ever cheerful, her smile ever kind, though they masked a heart "where sorrow had little left to learn." Oh, woman! thine are the triumphs of affection! the loving heart empowers thee to subdue moral as well as physical weakness. Oh! to her would it not have been far easier to die, than watch day by day the tints of life fade from that beloved face: to hear the hollow cough which sounded in her ears as the death knell of hope, and yet falter not in her endeavors to smooth their rugged pathway to him over whose feverish couch she watched and prayed.

She wrote a last appeal to her father, representing the dying state of him she had forsaken all else for; but her heart was steeped in despair when she recalled to mind the time it would take for her letter to reach him, and succor to be vouchsafed to her perishing husband. He needed medical attendance, such as their means could not enable them to procure; and, laying aside all thought of self, or the humiliation of seeking employment from that class to which she had once belonged, she one morning set out with the determination to procure needle-work, if any one could be found who would entrust it to her.

CHAPTER XIII.

Dark and unearthly is the scowl
That glares beneath his dusky cowl:
The flash of that dilating eye
Reveals too much of things gone by. *Byron.*

In the meantime, what had become of the lonely father? Had he in reality cast off the being who had been of his "home the breathing star?" Could he abandon the "sole daughter of his house and heart," without yearning to know what fate had overtaken her? Ah, no! stern, uncompromising though he was, there was in his heart too deep a fund of tenderness for the

creature who had been the sole companion and gentle soother of many weary hours, to suffer him, after the first anger had passed away, to be inaccessible to her appeals, had they ever reached him.

It was the second winter of Lucile's exile from the paternal roof, but it was the mild and delicious winter of a tropical climate. General Montessor was alone in the room which his daughter had been wont to inhabit; and every thing remained just as Lucile had left it. Even the marble vase, which she had filled with fresh roses the evening of her flight, was still there—the faded flowers offering a sad memento to the heart of the father. His brow bore many additional wrinkles, and his hair was white as silver: the outward signs that the proud spirit had not gone through the ordeal unscathed.

He walked up and down the floor with a troubled expression of countenance, then stopping beside a table, on which refreshments were placed, poured wine into a goblet, and quaffed it at a single draught.

"Aye," said he, speaking half aloud, "let me drink—drown thought in the ruby wine, for I have now no other consolation. Forsaken by all—by Heaven, there's not one grain of gratitude in the whole human race: and she, too—my child—my cherished one, to leave me, and seem to forget that her father is in existence! If she had written but once—but one line to say that she desired forgiveness, I might—yes, I might have relented: but she gave her love to another, and all my past tenderness could not keep even one corner of her heart for me. Then there is my precious nephew too—he has shown me of what stuff his soul is made—urging me, day after day, to make my will—the uncertainty of life, forsooth—I may die, and my child at last get all my wealth—well, and who has a better right to it?" His soliloquy was interrupted by the entrance of Victor.

"A good evening to you, uncle," said he, gaily; "you seem moody. Hast any ill news to day?"

"No, boy—there is no greater cause for moodiness to day, than the old and half-forgotten always have."

Victor turned away with a half audible expression of impatience, but his good nature appeared to overcome it, and when he spoke, it was in a bland and soothing tone.

"Why, my dear sir, will you persist in fancying yourself neglected or forgotten? The duty and affection of a son, I am sure I am always glad to render to you, and if I have seemed neglectful of late, it is because my time is taken up in attending to the estate you have so kindly bestowed on me."

A smile of irony curled the thin lips of the uncle.

"That estate, if I mistake not, joins my lands on one side, and those of Baptiste Moreau on the other; yet, if I am rightly informed, Mr. Victor Montessor finds time to sit many hours each day with the dark-haired daughter of the old Frenchman. Have a care, sir, I tolerate low connexion in my nephew no more than I have done in my daughter. This Moreau was but few years since a barber in Havana, and his daughter is no match for you."

The nephew laughed, as he answered, "Faith, uncle, I am sorry that your prejudices are so violent, as to make you illiberal on some subjects. Beauty and gold are sad levellers, and in truth, the graces of An-

nette Moreau have won my pride to her feet. I could not look on her majestic brow, and fancy myself her superior, despite the accident of birth. She is a quondam barber's daughter—I a spendthrift's son; she has beauty and wealth to bestow—I high birth, and by your munificence, a competence to offer—so I think we're pretty even, and to speak truth, I came this evening to invite you to my wedding."

Victor had expected a storm of passion, but his uncle spoke calmly, yet with much sarcastic emphasis.

"I commend your foresight, nephew. You act on the principle of the old adage, I presume, that 'a bird in the hand is worth two in the bush.' Well, I cannot blame you, and I am not sorry that I have placed it out of my power to throw you off as I did one who should have been far dearer to me. You are provided for, Victor, and I need scarcely say, that after a marriage, which you knew would be so displeasing to my prejudices, if you will, you need not trouble yourself to call again, as your interest can be no further served by doing so."

And thus they parted. With the facility of a common-place character, in transferring his affections, Victor had been easily won to forget his passion for his cousin, when she was no longer near him; and thinking it better to obtain a fortune by marriage, than depend on the precarious favor of an old man, who had been so severe toward his only child, he wedded the wealthy creole: yet Victor was not deficient in good feeling, and spite of his uncle's prohibition, he still continued to visit him occasionally.

The old man passed the remainder of the winter in loneliness and dejection. His spirit was quite broken by what he considered the desertion of his nephew, and he was only withheld from seeking his daughter by ignorance of her present place of residence. He had no companion but the priest, who irritated rather than consoled him, by his constant allusions to the ingratitude of his daughter and nephew.

One evening, early in the spring, they rode out together. For the first time, the pride of the father permitted him to inquire of the monk, if he had any clue to the residence of his daughter.

"None, whatever," said he promptly. "In being turned from her father's doors, the pride of Miss Montessoro received too deep a stab to be forgotten, or forgiven. She has concealed herself from all her former friends."

General Montessoro checked his horse, and looked around him, and his brow contracted as with a sudden spasm—speaking as if to himself, he said: "What is my wealth to me? I lie down with sorrow pressing on my heart, which drives sleep from my pillow—I rise to drag through another tedious, miserable day, with nothing to look forward to. Yet I deserve not sympathy, for I feel that I have myself banished peace from my heart—sunshine from my home. Father, this hour if I knew what spot of earth held my child, I would be willing to make a pilgrimage barefoot, and beg the morsels that sustained life, could I once more clasp her to my heart in safety."

As the priest listened to the words wrung from the bitterness of his sorrow, there was a sneer on his lip, and a flash of triumph in his eyes, which was instantly changed to an expression of sympathy, when the gaze

of his patron was turned on his face. He was about to reply, when a large snake glided across the pathway, his horse reared and threw him against the body of a tree. He lay motionless, with a stream of blood slowly oozing from his temple.

Dismounting, and calling to the hands in a neighboring field for assistance, General Montessoro had him conveyed to the house, and despatched a messenger for a physician.

It was some hours before consciousness returned: on opening his eyes, and encountering the fixed gaze of his patron, he made an effort to raise himself on his elbow, and motioned to the attendants to leave the room. The physician spoke:

"You must be perfectly quiet, father, or I cannot answer for the consequences."

"Your skill cannot save me," said he in a hollow voice. "I know that I am dying—another sun will never rise for me—and I have that to communicate to General Montessoro which must be told. In the hour of my triumph—long looked for—long hoped—death has struck me: send out the servants, and you, doctor, stay by me to administer such restoratives, as I may need, until my task is finished."

The room was soon cleared, and he then requested the doctor to hand him a letter box, which was beneath the head of the bed. With slow and trembling fingers he raised the lid, and took from it a number of letters, which he held out to General Montessoro, and, sinking back on his pillow, said—"Read them, while I collect my scattered thoughts, and remember what else I have to say."

Montessoro took the letters in silence, for he recognized the writing of his daughter, and he saw that they were addressed to him. The last one in the package, appeared to have been written more than two months: it was the last agonizing appeal of Lucile, written with the belief that Sidney was dying before her,—and every word went as a dagger to his heart. He read it, and approaching the bed of the dying man, and bending his face over him, distorted with anguish, he spoke in tones of such concentrated passion, that even the iron nerves of the priest for an instant quailed—

"Vile—vile wretch! serpent, that I have nourished, that you might sting me to death, where is my child? Have you relieved her wants? or—horrible thought!—has she perished in that strange land, to which my obduracy exiled her? Speak—or I will strangle you as you lie there, too helpless to assist yourself. Why have you acted so base a part toward your benefactor?"

The dark glittering eyes of the priest gleamed with an expression of intense hatred, as he repeated the last word, in a tone so wild and unnatural, that his listeners shrank back with a thrilling sensation of awe.

"Benefactor! ha! ha! ha! yes many and great are the benefits you have conferred on me, and I—God! have I not requited them!" Raising himself with sudden energy, he drew from his bosom a faded miniature, and holding it up, said—

"Gerald Montessoro, do you know this?"

General Montessoro strode a step nearer, and an exclamation escaped his lips. "It is—it is Marion! and you? Good heavens, is it possible!"

"'Tis true," gasped the priest;—"I am he whom

you rivalled—and the desolator of your house. I have not—lived—in vain.”

He sank back exhausted, and the physician hastened to administer a restorative. He presently revived, and motioning Gen. Montessoro to be silent, he continued—

“Let me speak while strength is left me. In an evil hour, Montessoro, you won from me the beloved of my whole life; and I swore to be avenged. I sought your bride—I poured on her all the bitterness of a spirit wrought to madness by her perfidy. I left her, and burying my name and existence under this priestly garb, I caused the report of my death to be circulated. She died—and I stood beside her grave, and felt that my vengeance was incomplete on him who had wrested her from me, so long as her child lived to glad the heart of its father.”

“Wretch!” said Montessoro, between his closed teeth; “and do I also owe the destruction of my son to you?”

A smile of bitter meaning played over the pale lips of the dying man.

“No—my revenge was more refined. I doomed him—*thy* son, to a life of penury, passed among the lowest of the earth. I bribed his nurse to inform you of his death—I saw them safely embarked for America. He lives perchance—but how? Vulgar—uneducated—ha! a fitting heir for your proud name!”

Montessoro buried his face in his hands—and the priest remained silent some moments; when he again spoke, his voice was low and feeble.

“Come nearer to me, Montessoro, for I grow weak, and my eyes are dim—they cannot see that proud form writhing with agony, nor mark the workings of that haughty spirit, which has placed you so entirely in my power. I followed you in all your wanderings, and at length fastened myself on you as your household chaplain. You wedded a second time, and a fair daughter grew in beauty by your side. I loved this child, spite of my sterner nature, for she twined herself unconsciously about my heart; and when the hour came, when I could also rob you of her, I shrank from the task, for it also involved her ruin: yet I tore this feeling from my heart—I worked on your pride, and her affection—like an evil spirit I whispered into the ear of each what hardened the heart against the other, and the result was what I anticipated. You threw her from your protection, and I withheld her letters—taught you to believe her so engrossed in her new ties, that she cared no more for you—and—and—’tis my conviction, that she has gone down to her grave, execrating the cold-hearted and obstinate father, who withheld from her the very means of life, while he revelled in all the luxuries that wealth can purchase. I have done.”

“And you think your vengeance is complete,” said Montessoro—his habitual self-command enabling him to speak with calmness. “No—priest, or devil, whichever you may be, if there is a God in Heaven, your foul treachery, your base ingratitude toward him who has befriended and trusted you—who never voluntarily injured you, will yet be baffled. I will seek both son and daughter, trusting to that providence which brings disappointment to the wicked. For you, I will not tell you to die and join him who is your fitting companion, but repent, and make your peace with Heaven.”

“Repent!” repeated the priest, scornfully. “No—

my end is accomplished, and why should I repent! I die not before my mission is fulfilled. I go to the rest of a dreamless slumber that knows no awakening, while you live to unavailing sorrow and remorse.”

General Montessoro left the room; and in a few more hours, the infidel, who for purposes of his own, had profaned the sanctity of the religious garb, breathed his last, amid curses and blasphemy too horrible for words.

Within a week, General Montessoro embarked for the United States. His object was to find his daughter—alleviate her sufferings—and then set every engine in motion to discover his son.

CHAPTER XIV.

Then I came to a solitary chamber in which a girl, in her tenderest youth, knelt by the bedside in prayer, and I saw that the death-spirit had passed over her, and the blight was on the leaves of the rose. The room was still and hushed: the angel of purity kept watch there. *Quier.*

Nearly fainting with fatigue, a young and delicate looking woman entered a shop, in one of the most fashionable squares in Philadelphia. A lady of prepossessing appearance, was examining some exquisitely wrought purses, one of which she designed purchasing for a bright-haired boy, who stood beside her. The stranger sat down by the stove, for the day was piercingly cold, and scarcely able to support herself in her seat, she leaned her head on the back of a chair which stood near her.

“Dear mamma,” said the boy, “this one with the wreath of roses and blue forget-me-nots that look so beautiful, shall be my birth-day gift to papa. Pray—pray buy this.”

“Certainly, my son, if you wish it. Wrap this up, if you please,” said she, laying the price of the purse on the counter. As she turned to leave the shop, the figure of the young stranger attracted her attention.

“Do you wish any thing here, young woman?” inquired the girl who waited behind the counter. The person addressed raised her head, and the low, soft tones in which she spoke arrested the retiring steps of the lady.

“Do you give out work here?”

“Not to strangers,” was the reply; and the girl busied herself in putting up the various fancy articles which lay scattered before her, heedless of the effect her answer had produced.

The applicant clasped her hands, and murmured audibly—

“Then Heaven help me, for I can do no more!”

She arose, and the strange lady obtained a glimpse of her colorless features, and was struck with the uncommon beauty of the countenance, though suffering of no ordinary kind was legibly imprinted there. She advanced a step as if about to speak, but checked herself, as if fearful of wounding where she desired to succor. With a head reeling with weakness, and faltering steps, Lucile entered the street. She had been away some hours, and feared that Grey was even now needing her attention. She did not observe that the strange lady had entered her carriage, which stood at the shop door, and was slowly following her. When Lucile entered her humble abode, the lady made a

memorandum of the street and the number, then speaking to the driver, she ordered him to go home as speedily as possible. In a short time, the carriage drew up in front of a splendid mansion in Chesnut street, and lightly springing up the steps, she encountered a gentleman at the door, who laughingly said—

"Why would you not allow me to exhibit my gal-lantry? I was hastening to offer my services in assisting you to alight, when lo! with fairy-like step, you have reached the door, while my more mundane body was perambulating the length of the hall: but what good news bring you hither, fair lady of my thoughts? Your face is radiant with tidings glad, if I read it aright."

"News which you will be pleased to hear, dear Horace—so come with me. Is Caroline in the drawing-room?"

"Yes, she has just returned," replied the gentleman, throwing open the door. "Enter, and divulge—divulge—my curiosity is on tip-toe."

"Briefly, then, I have seen the original of Caroline's Gipsy—have traced her home, and imagine from her appearance, and the house in which she lodges, that she is in a state of destitution."

An exclamation of pleasure escaped the gentleman—"What! you have found Grey out at last! Well, I am heartily rejoiced to hear it."

"And I too," said Miss Wilmere, throwing aside a book, and coming eagerly forward. "Where? How did you find them? Tell us all."

The relation was soon given, and the three seated themselves around the fire, to devise means of succoring the unfortunate artist, without wounding the shrinking pride, which had induced him to withdraw himself from all association with those who had known him in better days.

The lady who had so fortunately met Lucile that morning, was no other than Mrs. Edmonds, the wife of the same gentleman who had been so much interested in Grey's appearance the morning that his uncle's will was read. He had made many subsequent inquiries after the artist, but could obtain no information, and an absence of more than a year in one of the southern cities, had almost obliterated the remembrance of the young painter from his mind, when the picture purchased by Miss Wilmere, and her account of Grey, renewed his interest, and he made every effort to discover his abode. The hope of aiding him had just been abandoned, when Mrs. Edmonds saw Lucile, and instantly recognized the resemblance to the picture. That she beheld the wife of the artist, in the delicate and shrinking form before her, she did not once doubt, and she determined not to lose sight of her, until she had discovered her present residence.

The family of Mr. Edmonds accompanied him to the south, and only a few months had elapsed since he was recalled by the death of Mr. Wilmere, who was a partner in the same firm to which he belonged, and also an uncle of his wife.

After a long consultation, Mrs. Edmonds arose—

"Well, it shall be as you wish, Caroline: as you are already slightly known to Mr. Grey, it will be best to suffer you to visit them alone, and offer such services as you may think proper. I fear that he is ill; if so, insist on having him brought hither, where proper attention

can be bestowed on him, and on that frail, fair creature, who is wearing herself out in his service. I will order the carriage to be in readiness immediately after dinner."

As soon as possible Miss Wilmere equipped herself for her intended visit.

"I shall return with them both," said she, as she sprang into the carriage; "so be prepared to receive them."

In half an hour, she was safely set down before the dwelling she sought. Attracted by the unusual circumstances of a fine carriage stopping in the neighborhood, a number of women and children came out of the houses around to see who it contained. As Miss Wilmere alighted, a red face, with a soiled cap above it, was thrust through the half opened door, and a voice in keeping with the countenance, inquired who she wanted.

"Does Mr. Grey live here?" said the young lady.

"Mr. Grey? What—the painter-man? Why, what should the likes of you want with him?"

"Never mind, my good woman, what I want; only be kind enough to direct me to his wife's apartment."

"Oh, that's easily done, tho' 'two't be his 'partment nor hern much longer: folks as don't pay reg'lar don't stay in my house; so I told her this mornin' they might tramp as soon as they liked, or mayhap a little sooner, if they wasn't in a hurry. This way, ma'am."

As she spoke, she led the way up several dirty and ill-lighted flights of steps: they ascended to the highest story in the house, and the woman knocked several times at a low door. No answer was given, and opening it without ceremony, she thrust her head in.

"I would'nt wonder if the gentleman was dead, and for the matter of that his wife too," said she, as she drew back into the passage.

"Heavens! I hope not!" said Caroline, and involuntarily stepping forward, she stood within the room.

On a low, miserable bed, in one corner, lay the attenuated form of Grey: his hair clung in damp masses to his high and strongly marked brow—his pale lips were slightly parted, and his thin hand grasped the bed clothes. Disease, sorrow, and want, had laid the strong man low, while the more frail being had been supported by the strength of a love which only woman's heart is capable of feeling. Beside the bed knelt Lucile—her hair hanging loosely around her, and her head buried in the miserable covering: she heard not the words of the woman, nor the light footstep of her unexpected visitor.

At a glance, Miss Wilmere saw that it was not death on which she looked, but the heavy slumber which is brought to the feverish and restless couch by artificial aid; and the phial of laudanum, half emptied, which stood on a chair beside the bed, sufficiently explained the scene. She glanced around the desolate apartment. The evening sun was shining cheerily on the bare walls and uncarpeted floor; and his beams had nearly extinguished the few coals which lay on the hearth. Around the room ranged in order were the paintings of the artist—many of them unfinished—but all placed in such a position, that from his couch he could look on them.

"Place them so that my dying eyes can rest on them," said he to his wife. "Let the glorious dreams that have visited my fancy, and which I have endea-

vored faintly to shadow forth, be around me, in that last hour when these failing orbs shall close on this bright world, to be veiled in the cold—cold grave. With thy hand clasped in mine, and those creations of my pencil before me, I think I can bear to die, though I leave no name to other ages: the poet's epitaph—that of that young bright spirit, crushed by the injustice of others, will be a fitting one for me: 'Let my name be as though 'twere writ in water.' Ah, Lucile! Lucile! I have now but one wish, and it is for thy welfare, my beloved. When death kindly releases my suffering spirit, if he would fold both in the same chilling embrace, I should be happy—for then all cares would be ended, and thy love rewarded by being united even in death to him over whose waning life you have so tenderly watched."

In one corner was the painter's easel, and on it was a half-finished picture of a child at play; and the bright laughing face, sparkling with childish glee, was in striking contrast with all around it.

Miss Wilmere took in the whole scene at a glance, and hastily retreating, she said to the woman, "You may retire—he only sleeps. I will knock and arouse his wife."

The woman speedily disappeared, and she tapped slightly on the door. Lucile started from her kneeling position, and hastily winding her hair around her head, advanced to see who demanded admittance.

"Mrs. Grey, I believe," said the graceful stranger, presenting her card. Lucile bowed, though at a loss to know who Miss Wilmere could be, and what had induced her to seek one, who had abandoned the hope of mercy or succor from any mortal hand. She silently placed a seat for her guest, and sank on another herself. Some moments elapsed before Miss Wilmere commanded herself sufficiently to speak. She at length said—

"Mrs. Grey, I came hither partly on my own behalf, and partly as the ambassador of my cousin, to—to—. In short, my dear madam, my intrusion on the sacredness of your grief sufficiently explains itself. I can have but one motive, which is to be a friend, a sister to one who needs the consolations of friendship."

"It is too late," replied Lucile, pointing, without any appearance of emotion, to her sleeping husband. "Had the offer been sooner made, it might have benefited him—now I fear he is past all hope. I feel—I know that he must die, and I have no wish to survive him. Your succor comes too late, lady: there lies the wreck of as noble a spirit as ever breathed; broken by want—bitter, bitter want; and the consciousness that he had that within him which would lead him on to greatness, if a little of the sordid gold that makes the world's wealth, had not been denied him. This morning I left him, with a faint hope that I might be enabled to gain a few comforts, such as the sick need, by devoting the hours of his sleep to my needle, but every face was turned from the stranger—every heart hardened against her. In vain did I ask for work, which might save us from perishing, and I returned home, if this miserable place can be called a home, to see him stupified by laudanum: losing only in such slumbers the gnawing sense of pain, which the skill of a physician might alleviate, but which we are unable to command. I have knelt beside his couch, and my own selfish heart

was at last overcome, and I prayed that he might be released from his sufferings, though I shall then be—how desolate! only the searcher of all hearts may know." There was a meek and touching resignation in the tones of the speaker, which went to the heart of Miss Wilmere.

"I have then come in the hour you most needed the support of sympathy and affection—and, believe me, it is not too late to whisper hope for your husband. Change of abode, with proper attention, may entirely restore him. Mr. Edmonds, the gentleman in whose behalf I come hither, is already acquainted with Mr. Grey, and, as the friend of his late uncle, offers him an asylum in his house. The carriage is waiting at the door, and my cousin is prepared to receive you as her guest: the love you bear your husband will not permit you to refuse: you cannot so wound me."

She took the passive hand of the pale sufferer in both her own, and overcome by the voice of sympathy, to which she had long been a stranger, Lucile burst in tears. The sudden revulsion of feeling, from despair to hope, was too much for her overwrought sensibility, and had not tears come to her relief she must have fainted.

The arrangements of Miss Wilmere were soon completed, and when Grey awoke from the stupefying effects of the laudanum, he opened his eyes on a very different scene from that on which they had closed. He was in a spacious apartment, furnished in the most luxurious manner, and heated to a temperature more congenial to his feeble frame, than he had long felt. He looked around him in bewildered silence. The fading sunlight was flickering through the half drawn curtains, and, stranger than all, there hung his beloved pictures, and there, too, in the opposite corner, stood the easel, with the face of childish beauty, which even in his illness he had loved to look on, for that breathed of hope, where all else was dark as suffering and misfortune could render it. He raised his hand to put back the bed curtain, and in an instant Lucile was beside him. With a half shriek of hysteric joy, she threw her head on the pillow, and in a voice, broken by strong emotion, related to him the change in their situation, and a prayer of thankfulness arose from his grateful heart to Him who had raised up friends to them in the hour of their greatest need.

A physician had been called in, and a few moments after Grey awoke, he arrived. He carefully examined the case, but declined giving a positive opinion as to his chances of recovery.

"A few more days, and I can judge better," said he. "The constitution of Mr. Grey has been much shattered, and long and unwearied attention, aided by a climate much milder than the one we inhabit, may eventually restore him. Of that, however, I can better judge some days hence."

Mrs. Edmonds considerably concealed from Lucile, that any doubts were on the mind of the physician, as to his perfect restoration to health, and when a milder climate was spoken of, her husband inquired of her if Italy would suit the inclinations of Mr. Grey?

"He can there recover his health, and prosecute his studies at the same time," he continued; "and you, my dear Mrs. Grey, must overcome the too scrupulous delicacy which may lead him to refuse from me such

pecuniary assistance in the shape of a loan, to be repaid when wealth and fame have crowned his labors, as will enable him to reside abroad, and complete his studies."

Lucile thanked him, with tears starting from her eloquent eyes, and yielded herself to the glad anticipations of a future, blessed with health, competence, and the companionship of him for whom she had so deeply sorrowed.

A month passed by, and the physician began to entertain hopes of Grey's ultimate recovery. All that the most refined and delicate attention could do to make them feel perfectly at their ease, was done by the amiable family with whom they were. A friendship, which promised to end only with their lives, had sprung up between Grey and his noble-hearted host. He accepted the proffered loan, and preparations actively commenced for their voyage.

"Why not accompany them?" said Mrs. Edmonds. The idea was no sooner suggested than acted on. Mr. Edmonds had long designed spending some years in Europe, and his business would allow him to leave home at that time, as well as, perhaps, it ever would. Miss Wilmore was wild with joy at the idea, and soon all their thoughts were turned to classic Italy.

"But, mother," said the boy, when they were discussing their plans, "we cannot go without nurse. She would break her heart if you took baby away from her."

"It is strange that I did not think of that before, Charlie," replied she. "Nurse must thank you for recalling her to mind amid all this bustle, or I should indeed have forgotten her. She shall accompany us, if she prefers doing so to remaining behind."

"Who is the nurse to whom you allude?" inquired Lucile. "Not the girl who attends to your child?"

"No—no. She is an old Irishwoman, who nursed my husband. His history is a strange one: this old woman received him from his parents, and attended to him faithfully during his infancy. Both parents perished in the rebellion in Ireland, and his father, belonging to the rebel party, his property was confiscated. The old woman saved the child, by passing it off as her own: she came to America, and exerted every energy to give the boy, thus thrown on her protection, a good education. She accomplished it, though she endured every privation to do so. She obtained the situation of under-clerk in my uncle's store for him, and from that he has risen by energy and integrity to the station he now occupies. Nurse lives near us, on an annuity allowed her by my husband: we wished her to live with us, but her habits were so dissimilar that she preferred her present residence. My children visit her daily, and no mother could be more devoted to them."

Charlie was despatched for nurse, and in a few moments returned, leading a tall woman of about fifty-five years of age.

"Well, honey dear, and ye're going to furrin parts," said she, with as unsoftened a brogue as though she had only left the Emerald isle a month before.

"Yes, nurse," said Mrs. Edmonds, "and I have sent for you to see if you will not accompany us. My sweet little Kate, your own namesake, will plead for you to go along," holding up, as she spoke, a curly-headed child of a year old, who laughed and clapped her hands at sight of the old woman.

"And does ye want the ould nurse to go wid yus, jewel of my heart?" said she, taking the child from its mother. "Och, but it's a swate crayther any way, and I couldnt bear to see yus take it away, and let it clean entirely forget the ould nurse that loves it so dearly; and I s'pose I'll have to go to the outlandish countries where they talk furrin lingo I don't understand."

It was speedily settled that she should go, and the evening before their departure, the faithful Agnes, in obedience to the summons of Lucile, arrived to accompany them abroad.

CHAPTER XV.

A piteous, fearful sight—
A noble vessel laboring with the storm. *Bertram.*

Kneel not to me: *Shakespeare.*

I cannot speak, tears so obstruct my words,
And choke me with unutterable joy. *Othway.*

The weather, for the first two days after the embarkation of our little party, was delightful; but on the third night, a storm arose, which drifted the ship many leagues south of the course they designed pursuing. No serious damage was suffered however, and the following morning arose calm and bright. The ship was sailing with a steady breeze, and an awning had been erected on the deck, under which our travellers were all collected. The children had their play-things—the ladies were around a spyglass which Mr. Edmonds was superintending, and Grey, with the privileged indolence of an invalid, was reclining in a large chair, turning over the leaves of the last new novel: nurse was sitting near him playing with her little namesake. Suddenly touching his arm, she said—

"It's a strange fancy in me, mayhap, but don't ye think now, Misther Grey, that the jewel of a young leddy, your wife, has something in the cast of her countenance like my own child as I always call him, and when she speaks in a commandin' way like, she 'minds me of him, and one I used to know a long time ago; I wish I could tell where he is now."

The woman sighed deeply as she concluded, and Grey looked toward Lucile and his friend: both stood with their profiles turned to him, and her bonnet having fallen back, he was struck with the resemblance in the outline of the features, and the shape of the head. At that instant, Miss Wilmore, who was looking through the glass, exclaimed—

"A sail!—a sail!—and, if I mistake not, exactly in our track."

All were eager to examine it, and with the aid of the glass, a faint speck was just visible on the verge of the horizon.

"After the blow we had last night, it may be a vessel in distress," said the captain.

Half an hour's sailing served to bring them near enough to confirm his suspicions: they approached the hull of a large ship, which was rapidly settling in the water. Part of a torn sail was flying from the broken mast, as a signal of distress, and three figures were visible on the deck, shouting and making gestures of despair. The captain hastily manned his boat, and

proceeded to rescue them from their perilous situation. On boarding her, he learned that she was the Ellen Douglas, bound for Philadelphia, and had been wrecked the preceding night. The crew had mutinied against the captain, seized the only boat, and left himself, and an elderly gentleman and servant, who were passengers, to perish with the wreck. They were hourly expecting to be engulfed in the waves, when the approach of a strange sail offered to them the hope of escape.

The strangers were speedily transferred to the boat; and as it approached their vessel, Lucile, with a pale and agitated countenance, leaned forward to catch a more perfect view of the eldest of them. As he stepped on the deck, she sprang forward, with a cry of joy, and throwing herself at his feet, exclaimed—

"It is—it is my father! In this hour you cannot refuse to forgive me."

"No, my child, come to my heart, dearer than even in days of yore. It was seeking you, when fortune so providentially has thrown us together; but where is Sidney? and how came you here?"

"Oh, it is a long story—come and let me make you known to our friends: among them you will find Sidney looking ill, but now recovering from a long indisposition."

As General Montessor approached the group, beneath the awning, looking eagerly among them for the form of Sidney, an exclamation from the Irish woman attracted his attention.

"Blessed Jesus, but it's himself," said she, crossing herself devoutly. He stopped, and fixing his falcon glance on her, said sternly—

"Woman, I have found you sooner than I anticipated. Tell me, Kate Kinsey, as you value your life, what have you done with my son? I know all your treachery—answer me truly as you hope for mercy."

"And sure it's me as would'n't hurt a hair of his head," said Kate, falling on her knees, "for I loved him as if he was my own, and many's the hour these hands have toiled to give him the larnin' he had a right to: and sure my own child was under hiding for helpin' in the rebellion in ould Ireland, and the money that devil gave me was to help him to Ameriky, or I would'n't have wronged him any how at all—at all. And now, General Montessor, there he stands six feet in his shoes, and a jewel of a crayther he is, barrin' his likeness to yourself."

Here let the curtain drop. The scene that followed may be left to the imagination of the reader.

General Montessor accompanied them to Italy; and we will merely add, that Grey is now in England, and we expect soon to hear that he has immortalized himself, by taking the best likeness which has yet been drawn of the peerless Victoria. We say *peerless*, for she is eighteen and a Queen! Who shall dispute her title to supremacy over all her sex?

GRATITUDE.

Nothing can equal the power of gratitude in a heart of sensibility; it often coincides with the inclination, and sometimes possesses all the charms, without the fickleness of love.—*Anon.*

"SIC TRANSIT GLORIA MUNDI"

I.

I saw upon the glassy sea
That glowed beneath the morning sun,
A barque in dauntless majesty,
And pride of place, move fleetly on:
From the skies auspicious gales
Gently swell'd her snowy sails,
And bore her on with glee!
Alas! the sudden tempest roars;
The sky a storm of fury pours—
The sport of wind and wave,
Borne onward to the fatal shores,
The vessel finds its grave.

II.

I saw beneath the gentle ray,
The first of dawn upon the earth,
The purplest flower of infant May,
The moment it had birth.
The deep carnation's richest hues
Were temper'd by the morning's dew,
Her tears for rival worth:
Alas! that flower so soft, so bright;
The star and blossom of the sight—
The jealous winter saw, and sped—
And wither'd by its wing of blight,
The lovely flower lies dead.

III.

I saw a form that knew no bound,
Save that of honor, reason, right—
A godlike spirit, his was found,
'Monst' things and thoughts of light:
A high ambition, he would break
The chains of man, and nobly take
The scales from off his sight!
I saw him reel beneath the blow,
The spirit crushed, the promise low—
And not the ship so proud and free,
Or bright flower crushed by winter's snow,
Was half so sad a sight to see.

ALPHA.

PARTING SONG.

"The world is divided into two parts—that where she is, and that where she is not."—*Rousseau.*

To-morrow! to-morrow! oh where shall I be?
My heart has been light while its home was with thee!
When the world has frowned darkly, thy form to my sight

Was the bow of my tempest—the star of my night;
But now must I wander, alone and afar,—
No ray to my cloud; to my midnight, no star:
But welcome the storm, so it break not on thee!
To-morrow! to-morrow! oh, where shall I be?

The stars that unfurl their pure glories on high,
In brightness shall melt on the face of the sky;
But the star of my soul must be shrouded in gloom,
And borrow from darkness a pall and a tomb:

Alas! that we, ever, so soon need relief,
 Ere joys are enjoyed, from the arrows of grief!
 That we meet with the loved, but new partings to see!
 To-morrow! to-morrow! oh, where shall I be?

Thou know'st not the world—there are sweets on its lip,
 But only the children of gladness may sip;
 There are smiles—for each brow that can marshall a
 smile;

And tears—for the tearless, who need not the while;
 The eye sparkling with joy has a spell to endear,
 But the charm is dissolved, when it glows with a tear;
 From such vanities, dearest, forever be free—
 To-morrow! to-morrow! oh, where shall I be?

If my prayers, for myself, have been feeble and few,
 Doubly strong is the tide I have offered for you;
 And if thou, for thyself, hast forgotten to plead,
 'Twas in pleading for me,—and our Father will heed;
 The award of his love we shall equally share!
 The one for the other will wrestle in prayer!
 Thrice blest is the token faith offers to me—
 To-morrow! to-morrow! oh, where shall I be?

To-morrow! to-morrow! oh, where shall I be?
 My heart has been light while its home was with thee!
 And still its warm pulse shall bound lightly as air,
 For, wherever I wander, its home will be there!
 And while it is absent, with thee, from my breast,
 Its place by the presence of thine shall be blest;
 And thine, in each throb there, will whisper of thee!
 To-morrow! to-morrow! oh, where shall I be?

Camden, S. C.

B. W. H.

A DISCOURSE

ON THE GENIUS OF THE FEDERATIVE SYSTEM OF THE UNITED STATES.

Prepared to be delivered by Professor Beverley Tucker of William & Mary College: read before the Young Men's Society of Lynchburg, Va., Aug. 26, 1833.*

I appear before you, gentlemen, in compliance with an invitation which deserves my grateful acknowledgments. To have been deemed capable of offering one thought proper to guide your minds in the pursuit of truth, is an honor, which I beg you to believe I highly appreciate. In proportion to my sense of it, has been my anxiety not to disappoint your favorable anticipations. I have felt that it was my duty to give my best thoughts to the selection of some topic worthy of your attention. In my choice, I have been aided by the obvious reflection, that you would naturally expect from me a discourse on some subject not remotely allied to the studies of the youth committed to my charge. With these you had reason to suppose me most familiar; and it became me to believe

that your invitation was dictated more by a wish to hear something connected with them, than by any misjudging partiality for myself.

To what theme, then, could I more naturally turn, than to that of the peculiar character and structure of our political institutions? What subject is it so much, at once, the interest and the duty of every man to study and understand? We are a free people; and when we say this, it becomes us to consider what we say, and to form adequate ideas of all the rights and all the duties implied in that word freedom. We are emphatically a free people; free in theory, and free in fact. By the unqualified acknowledgment of all the functionaries who minister in our affairs, *they* are *our* servants, and *we* *their* masters and *our* own. What study then so interesting as that of the character of our rights?

Yes, gentlemen, we are *FREE*; and this, our freedom, is our boast, for this at least we have, in common with the men whose history is fame, and whose deeds most nobly illustrate the name of man. The beacon-light which guided Miltiades, and Themistocles, and Cincinnatus, and Camillus, and Cato, and (greatest of all) our own illustrious Washington, along the path of glory, still shines for us, and to us the same path is still open. To emulate their deeds and rival their renown is the task before us; for to be free, is to have it always in our choice to devote ourselves to the well-being of our country and the world.

Yes, gentlemen! The career of these distinguished men is open to us; but it is only as the career of Cyrus was open to Sardanopulus; the career of Titus to Domitian; the career of Trajan to Elagabelus; as the career of every monarch, illustrious for wisdom and virtue, has been open to those scourges of the earth, whose life has been one wanton and tyrannical abuse of powers conferred for the benefit of their fellow men.

Gentlemen: it is in no unkind spirit that I have suggested this comparison. It is that I may at once startle you to a sense of the eternal though much perverted truth, "that liberty is power;" and that all power, whether that of a sovereign prince or a sovereign citizen, is alike a trust, delegated by the same all-wise being, and enforced by the same sanctions;—honor, the reward—infamy, the punishment. Do you look with contempt and abhorrence,

"On him who sits amid the gaudy herd
 Of mute barbarians bending to his nod,
 And says within himself, 'I am a king;
 And wherefore should the clamorous voice of wo
 Intrude upon mine ear?'"

Well may you do so; forgetful as he is, that the power of which he boasts, was given him that he might make the sorrows of his people his own, and succor their distress, and mitigate their calamities, and soothe their afflictions. But have you no

* Professor Tucker was unavoidably prevented from delivering this address in person; and it was read before the society by one of its members, and unanimously ordered to be published in the Southern Literary Messenger.

kindred feeling for him, who says within himself, "I am a freeman; and wherefore should the eye of God or man inspect my ways or hold me answerable?" Reverse the case, and the question might be more appropriate. Were he a slave—his misdeeds might be another's crimes. As it is, he is master of his actions and his destiny. Who shall stand between him and the arbitrament of public opinion? Who shall shelter him from the irreversible condemnation of posterity? Who shall screen him from the eye of the judge of quick and dead?

Gentlemen: if to be thus free is to be thus responsible, (and that it is so, heaven and earth do witness,) is it less your duty than that of the nursing of royalty, to acquaint yourselves with the true character of the government whose authority you direct, and the enduring interests of the country whose destinies have been committed to your hands?

You will readily answer, "No." Yet some may be surprised at the earnestness of this question, supposing, as so many do, that nothing is so easy as the successful administration of the affairs of a free people. That this idea is delusive, the history of every nation that ever tasted of freedom too plainly shows. Precisely in proportion to the strength of this delusion, and the apparent simplicity of free government, is the difficulty of the task. This it is that renders men impatient under the restraints of wholesome laws. This it is that establishes a miscalculating confidence in the efficacy of forms of government and constitutional restraints. This it is that causes that confidence to glide from the government itself to those who administer it, that lulls into fatal security that jealousy, whose sleepless watch is the only safeguard of freedom, and commits the keys of the fortress of liberty to hands which convert it into a dungeon.

Gentlemen: freedom, in its simplest, social form, is an affair of government. The philosophy of social freedom is the philosophy of self-government. If this were all, this alone were enough to show the difficulty of the problem. Who of us is equal to the task of self-government, even on the narrow theatre of private life, and in the discharge of its simple duties? Yet it is in that sacred regard to these, and all the other duties of life, which we dignify by the name of virtue, that political philosophers place the foundation of republican government. "Men," says the wisest of all observers on the political history of man, "men are qualified for civil liberty in exact proportion to their disposition to put moral chains upon their own appetites; in proportion as their love of justice is above their rapacity; in proportion as their soundness and sobriety of understanding is above their vanity and presumption; in proportion as they are more disposed to listen to the counsels of the wise and good, in preference to the flattery of

knaves. Society cannot exist, unless a controlling power upon will and appetite be placed somewhere, and the less of it there is within, the more there must be without. It is ordained in the eternal constitution of things that men of intemperate minds cannot be free. Their passions forge their fetters."

Hear too, I pray you, the remarks, by which the profound and philosophic Montesquieu illustrates the necessity of the controlling presence of virtue in a republic: "When virtue is banished," says he, "ambition invades the hearts of all who are capable of receiving it, and avarice possesses the whole community. They had been free with laws. Now they want to be free without them. Every citizen is like a slave just escaped from his master. What once was *mairm* is now called *rigor*: to order they give the name of *restraint*, and that of *fear* to *prudence*. FRUGALITY, then, and not the THIRST OF GAIN, passes for *avarice*. Before, the property of private men constituted the public treasure; but now, the public treasure is become private property. Then it is, that the members of the commonwealth riot on the public spoils, and its whole force is reduced to the power of the few and the licentiousness of the many."

I am fearful, gentlemen, that no suggestion will be necessary to awaken your attention to the resemblance, in some traits of this striking picture, to objects with which your thoughts are familiar. But it has not been presented for this purpose. My design is to bring before you a high authority, verified, in part, by your own experience, in proof of the indissoluble alliance between freedom and virtue, and the necessity of preserving the latter as the only safeguard of the former.

And how shall public virtue be preserved? By the same means which are found most efficacious to secure regard to all the duties of private life. By strengthening the incentives, and weakening the dissuaves to virtue.

Foremost among the first is the love of country, aided by the love of honorable fame. But what must be that love of country, which is to furnish an ever present and prevailing motive of action, intense enough to triumph over the seductions of pleasure, the temptations of avarice, the blandishments of ambition? Shall it be a mere abstraction, and conversant only with abstractions? Can a name, an imaginary boundary, an arbitrary association of discordant interests and characters, possess a charm of such power? What indeed is our country, but that which embraces the objects of all the ties which bind man to his kind? And what is love of country, but a compendium of all the natural affections of the heart—a blending of "all the charities of all to all?"

Is it not obvious, gentlemen, that a society, embracing all that is dear to the heart of any man, must unite upon it the strongest attachment, of which his particular nature is capable? Is it not

also certain, though perhaps less obvious, that this attachment will have less of the fervor of passion, in proportion as its object is weakened and diluted by being combined with other objects which are regarded with indifference and perhaps aversion? Every man is more deeply sensible of the ties which bind him to his own immediate family, than of his more extended relation to the society of which his family is a member. But let that family form but an inconceivably small part of a collective whole, made up of jarring opinions, and uncongenial feelings, and incongruous habits, and adverse prejudices, and conflicting interests, and there is danger that the love of family and friends, on the one hand, and the love of country on the other, instead of being identical, will become antagonist passions. The very sentiments—out of whose delicate fibre is spun the strong cord that binds the heart of man to his country—may they not thus hold back his affections from fastening on that object? In short, gentlemen, does not a sound view of the philosophy of the human mind point to the conclusion, verified by all experience, that it is in small communities only, that the love of country is found to glow; with the intensity of those passions, which account life as worthless, in comparison with the honor of a wife, the purity of a daughter, or even a wanton's whim. When the countless hosts of Germany met at Austerlitz the army of Bonaparte, the pride of military glory, the very *certaminis gaudia* nerved them to a short and vigorous struggle, and then they scattered like chaff before the wind, and their country sunk unresisting before the triumphant invader. But when three hundred inhabitants of a petty Swiss canton encountered at Mogarten the overwhelming force of Austria, they thought not of victory—they thought not of glory—they thought not of safety. Their thoughts were only of their country. Their country, their *whole country*, was spread out before their eyes, and from every commanding height each soldier looked on the scenes of his childhood's sports, on the fields his own hands had tilled, on the roof that sheltered his loving wife and tender babes. There they stood, fighting as men who, in the midst of despair, perform the tasks of hope. There each fell fighting where he stood, and none was left to tell the story of that glorious but disastrous day. Such are the deeds that testify that the love of country may be a passion which shall spurn at every thing which might frighten or allure, and which can triumph even in death by leaving the conqueror nothing but the worthless carcass of him he would enslave.

But, gentlemen, it is not through fear alone that liberty is endangered. Other passions, though less abject, are more corrupting; and death itself does not more powerfully influence the mind than the temptations of avarice, and the allurements of ambition. But what is that ambition, whose loft-

iest aim is the sovereignty of a petty canton? What is that avarice, whose cravings can be satisfied by the plunder of a small and poor state? Weak, indeed, must be the love of country which would not be proof against such paltry temptations. Between the chief of a community, whose place can scarcely be distinguished on the map—whose existence is hardly noted in the history of the world—and him who is but eminent among his neighbors for probity, benevolence and wisdom, ambition itself sees little choice. The love of power is rarely any thing but the love of money, or the love of fame, and weak must be the temptation to seek a station which promises little of the one, and nothing of the other. Ambition is indeed at work every where; in the village as in the metropolis; in the canton as in the mighty empire. "Little things are great to little men." But, gentlemen, it is *not by little men* that the liberties of states are overthrown, and the destinies of nations fixed for good or ill. The evils, against which we have to guard on the side of ambition, are those which might furnish motives of prevailing influence over men capable of great achievements. Ambition, in such a man, when his lot is cast in an inconsiderable community, lifts his aspiring eye to objects far above the paltry offices and petty political distinctions of the state. She reminds him that he is a member of the republic of letters, of the great family of man, and incites him

"To make his mind the mind of other men,
The enlightener of nations."

Hence the flood of light—the continued stream of moral and intellectual influences—that the little republic of Geneva has poured upon the world, from minds, which placed in mightier states, might have shaken thrones, and changed the destinies of the earth. It is in such states—in states that figure in the drama of the great commonwealth of nations, and whose annals form a conspicuous part in the history of the world—here it is that ambition finds its natural aliment, and displays its portentous power.

Gentlemen: had the task which lay before our fathers, been nothing more than to devise a government for the small, though magnanimous colony of Virginia, adequate to her wants and consistent with her free spirit, that task would have been comparatively easy. Experience has shown that the slight change in her domestic polity, rendered necessary by a severance of her connexion with the mother country, was all sufficient. The history of the world might be safely challenged to produce an example of a government more exactly fulfilling all its legitimate purposes, and no more, for fifty years after that event. Do you ask the reason? Look at the powers of your public functionaries! What object was *there* to provoke ambition? Look to the fiscal resources of the

state! What was *there* to fill the rapacious man of avarice? Look to the whole structure of the government, and then find the man who could promise himself, from any abuse of its powers, an equivalent for the blessings to be enjoyed under its faithful administration!

The extreme simplicity and perfect efficiency of the original constitution of Virginia, so long as it was retained, may suggest to some the thought, that, in the problem of free government, there is less difficulty than I have supposed. But, alas! gentlemen, there was, in that constitution, one capital defect. It had not the faculty of preserving itself; for it provided no security against corruptions from without, and a consequent spirit of innovation, which first changed the people, and, through them, changed the constitution.

But still the question comes back upon us: How did it happen, that, through the lapse of half a century, the history of Virginia fully justifies the boast of one of her noblest sons—the boast, that during all that time, “not only did no instance occur, but no charge was ever made, no suspicion entertained, of one single act of corruption in any officer in legislative, executive or judicial station: that no poor man had ever been oppressed with impunity; no rich man exalted on the mere strength of wealth alone; and that no commotion, no faction, no animosities had ever arisen among us, in relation to our internal affairs of government.”

The answer to this bold challenge is to be found in considering how much of the sources of corruption and undue influence, how many of the incentives to ambition, and lures to rapacity are found in the management of the external relations of a state. These give rise to armies, and navies, and foreign embassies; and these to commercial regulations and overflowing revenues; and here it is that ambition finds objects worthy of its aspirations, and the means of attaining them by the corrupting influence of gold.

From these mischiefs, our domestic institutions were happily exempted, by the arrangement which committed to the federal government the management of all these high and delicate concerns. Within *itself*, therefore, the state government carried no principle of corruption—no disturbing influence to unsettle the balance of its powers, and the harmony of its action. But it would have been unworthy of the wisdom of our ancestors to suppose that the evil was eradicated, because the mischief was thus turned aside. On the contrary, it became them to reflect, that if the foreign relations of a petty state might awaken ambition and afford the means of swaying and corrupting her public servants, the same danger was more to be apprehended from a government wielding the sword and the trident, and administering the revenues of all this vast continent.

The history of the time is full of proof that this danger was viewed with an anxious eye. The formation of a vast reservoir of patronage and influence, which might burst its bounds, and sweep before it all the barriers of the constitution, was a work which demanded all the skill and all the caution of the able men engaged in it. The possibility, that such a destroying stream might be poured over the land, was a necessary consequence of the union. To stay the torrent by direct opposition, might be impracticable. What remained, but to remove, as far as possible, from its desolating course, the great bulwarks which defend the rights of life, and liberty, and property, and domestic peace, and the blissful relations of private life?

To secure this end, an attempt was made to disassociate, from the command of these sources of influence, all authority to legislate over the private interests of men; to accumulate as many as possible of the powers of government in the hands of state functionaries, having little of patronage to recommend misrule to the favor of the aspiring and greedy; and to strip the dispensers of the enormous revenues of the union of all pretexts to invade the sanctuaries of private rights.

Another consideration strongly recommended the same distribution of powers. It has been well and truly said, that it is the duty of every people to consider themselves as the trustees of the providence of God, in the use and enjoyment of such portion of his earth as he has allotted to them. Made for the use of man, it is his office to develop its resources, and to task its utmost powers for the benefit of the human race. To this object his legislation should be adapted. Is he blessed with a fertile soil and genial climate, that he may suffer the earth to waste its affluence in wild luxuriance, poisoning the air with rank and unprofitable vegetation? Will not the cry of the hungry orphan rise up to heaven against him, who thus abuses the bounty of the common father of all? Do the bowels of his land teem with rich ores, designed for man, and shall he not draw them forth from the deep recesses, where almighty wisdom has deposited them for his use? Do gushing streams pour down from barren hills into unfruitful vallies, and shall he fail to subdue to his service the mighty power, which, since the world began, has thus been wasting its gigantic strength, and waiting only for the controlling hand of man to direct its energies to the mill, the forge, the loom, and all the infinite variety of machineries, by which the comforts of life are extended, multiplied and diffused? Do his insular situation, and safe and capacious harbors, give him peculiar advantages for commercial enterprise, and shall he not spread his sails to every wind of heaven, and devote himself to the noble task of communicating to every part of the earth all the peculiar advantages of each?

That such is the duty of man to his Maker and his race, none will deny; and, so far as legislation is necessary to the fulfilment of this duty, so far should it be directed to that object. But how would this task be performed by a legislative body, supreme in all things, and giving-law in all things, to a country extending from Passamaquoddy to Cape Florida, to the Gulph of Mexico, and to the shores of the Pacific; a country embracing every variety of soil, and climate, and production, and including various states, some exclusively fitted for agriculture, some for manufactures, and some for commerce? Could the system of legislation which is best for each, be best for all? Must the resources of all be but partially and imperfectly called forth; or must the mean necessary to their full development in one part, be used to the utter destruction of all hope of a like result in the other? Gentlemen—we had just seen the trial and the failure of a like experiment made on this principle. The British colonies in North America, so long as the parent government confined her legislation to the proper objects of mere commercial regulation, had grown and flourished in a degree unexampled in the history of man. But a claim was set up by the imperial parliament, of a right to legislate for the colonies in all things; by an old country, for a country in its infancy; by a commercial and manufacturing country, for a country almost exclusively agricultural. The consequence of this pretension was a severance of the connexion, which our fathers saw must be fatal to the ultimate prosperity of the colonies.

What different result could have been expected, had the general congress of the United States been endowed with powers to legislate in all things for the whole of this vast continent? How long would it have been before a fixed local majority would find or create a fixed local interest, to be advanced by legislation at the expense of a fixed local minority? What hope would there have been, that such a project, once formed, would ever have been relinquished? In small communities, the occasions for such combinations might be more obvious and more frequent. But in such it might not always be in vain to appeal to the sympathy or magnanimity of the stronger party. Such an appeal, made in an assembly of the people, addressed to men, each acting for himself, and responsible to none but himself, each exercising his share of legislative power in his own person, and for his own behoof; such an appeal, addressed to men so circumstanced, and on behalf of friends, and neighbors, and kindred, might not unfrequently prevail. The unequal working of an oppressive system could not be denied. Their own senses would be the witnesses. The complaints of the sufferers would sink into the hearts of those having daily before their eyes the evidence of the calamities endured. But who will expect a sacri-

fice of interest to sympathy in favor of the people of a distant region, of different manners, habits, opinions, and prejudices, perhaps of a different race, or deriving from their ancestors a far-descended and long-cherished animosity, both religious and political? But even though, could such appeals be made to the people directly, some momentary relents might touch their hearts, what advantage of this sort could be expected, in a *representative* assembly, where each man acts, not for himself, but for others, and makes it a point of conscience to harden his heart against the compunctious visitings of nature, and to resist the influence of every consideration but those that spring from the peculiar, and even the mere local interests of his immediate constituents?

Such, gentlemen, are the evils, to which our masters in political philosophy allude, when they warn us against the consequences of consolidation. Such are the mischiefs, against which the authors of our institutions intended to guard, when distributing the powers of government between the functionaries of the states respectively, and those of the whole collectivé union. In the necessity of devising some means to place the external relations of all the states on the same footing, and to unite the powers of all for the common defence, was found the sole and avowed motive to the adoption of the federal constitution. So far as the general government is made instrumental to other ends besides these, so far do its administrators offend against the spirit, even when they do not transcend the letter of that instrument.

On the other hand, we behold the state governments in the full exercise of that sovereignty, which holds at its disposal the life, the liberty, the property of every man in the community; yet so restrained from any abuse of powers so formidable, that we become almost unconscious of their existence. Yet there they are, and so few were the limitations imposed by the original constitution of this state in particular, that theoretical politicians did not hesitate to pronounce the omnipotent legislature of Virginia the very *beau idéal* of a many-headed despotism. Yet where were its despotic acts? Where do we find the history of its abuse of this seemingly gigantic power? No where. Where then do we find the principle which has restrained this body from perverting its authority to any purpose of oppression or injustice?

We find it, gentlemen, in the total absence of all those sources of corrupting influence, which take their rise in the management of external relations, and the disbursement of the vast revenues necessary for that purpose. Wanting these, the government of Virginia has nothing wherewithal to gild oppression, to varnish injustice, to buy the support of the mercenary, and to engage the co-operation of the ambitious. Look at our history!

From what quarter of the state has the voice of complaint risen up against the state government, for the alleged abuse of any of its powers? What public functionary, however armed with official authority, however conspicuous for talent, however illustrious for public service, has dared to defy the popular will, or professing to respect it, has attempted to mould it to the purposes of his ambition? Look, gentlemen, to the highest office in the gift of the people of this state. Who feels the influence of the incumbent? Respectable as he certainly is, how many of us here present actually know his name? Who has ever imputed to him the power of controlling elections in favor of his partizans? What fawning minion can he provide for by means of lucrative salaries; passing him on from post to post, and while his unfitness for all alike is manifest to the world, retaining him still in office? What female of tainted reputation would he dare to obtrude on the chaste society of Richmond? On whom can he cast the mantle of his authority? Where is the man whom his anointing hand can consecrate as his successor?

Nor do I limit the application of these questions to the present incumbent of that office. The answers, which would be true in his case, will prove equally true with reference to the most illustrious of his predecessors. The page of Virginia's annals is bright with the most glorious names that live in history. Among them we find that of Patrick Henry. "*His breath was agitation, and his life a storm whereon he rode.*" But, in the silent discharge of his duties as governor of Virginia, that tempest was stilled: the word of power, which struck the sceptre from the tyrant's grasp, was heard no more; and his official career is nowise distinguishable by any extraordinary influence or authority, from that of the humblest of his successors. There too we find the name of Thomas Jefferson. As president of the United States, he has been seen to exercise a power over the thoughts, the affections, the will of his countrymen, without example before his time. As governor of Virginia, what was he, but an official drudge, bound down to the literal execution of his limited functions? Was the chair of state a throne of power to James Monroe, or but a *stepping-stone* from which his ambition might mount—*up*—to a *higher* place—on the *footstool*—of the president of the United States?

These questions, gentlemen, are asked in no invidious spirit. They are but meant to remind you how perfectly the great ends of free government have been accomplished among ourselves, by cutting off from the state authorities all the sources of influence which spring from armies, and navies, and foreign representation, and the enormous revenues necessary to these objects. Deprived of these, the full and unquestioned authority to prescribe to us all the rules which are

to regulate our civil conduct, and to enforce them by the most fearful penalties, is powerless, except for good. In like manner, in the regulation of our domestic police, and of the rights of individuals, and in all that pertains to the general welfare of the people and state, we find the duties of equal and exact justice to all men enforced by a responsibility to the public will, from which there is no escape.

If these things be so—if such be the security to private right and public weal, resulting from the denial of such means of influence to those who minister in our domestic relations—how important must it be, to guard the barrier intended to secure our private interests and pursuits from the invasions of an authority armed with all the power and all the influence incident to the management of the foreign relations of this vast continent! The danger is alike in both cases, but far different in degree. Was it unsafe to commit to the state executive the dispensation of the patronage incident to the representation of the miniature sovereignty of Virginia among the nations of the earth; and can it be safe to trust to the government, which manages the whole foreign relations of all the states collectively of this extensive confederacy, any, the least, right to meddle in matters properly belonging to the municipal sovereignty? If it be unsafe to trust the trident—the thunder-bolt—the olive-branch—to him who presides over the calm relations of private life, can it be safe to permit him who is already familiar with these emblems of rule and instruments of power, to touch, with his heavy hand, the delicate interests of individuals, and to bring his portentous authority to interfere in adjusting the domestic rights and relations of men?

These thoughts are suggested, gentlemen, for the purpose of presenting fully to your view the objects which the framers of our institutions proposed to themselves, in dissociating the power to regulate the foreign relations of the confederacy, from the power to manage the domestic concerns, and to legislate over the peculiar interests of the states respectively. How far their purposes were wise, and their plan judicious, is well illustrated by the operation of the state governments in which this plan has done its perfect work. If it has failed elsewhere, it is because the wise and patriotic statesmen of that day had no measure by which to estimate with accuracy the force of the untried powers which they were about to commit to the hands of the federal government. The history of the time shows that they but imperfectly foresaw the extent of those powers, the magnitude and importance of the confederacy, the abundance of its resources, the overflowing affluence of its revenues, and the vast amount and various character of its wide-spread and all-pervading patronage. Had they foreseen these things, they would have heeded

the warning voice of that great statesman, whose tomb is in the midst of you,* admonishing them "that a defect of power may be supplied, but that an excess of power can never be recalled."

Gentlemen, in this simple proposition there is at once a manifest truth and a self-evident importance, which startle us with their palpable distinctness. We pause. We reflect. We wonder that men engaged in the delicate task of devising a form of government *for themselves*, should ever fail to practise on this maxim. What so simple, as to give, in the first instance, powers certainly not excessive, and, guided by experience, to add more, as events might show that more were necessary?

Gentlemen, this is precisely the problem which the framers of our institutions proposed to work, in adjusting the balance of power between the state and federal governments. With a vast majority of the men of that day there was a paramount desire to guard the sovereignty of the states, and by no means to arm the hands of federal functionaries with any pretext for interfering with the proper subjects of state legislation. But it happened, unfortunately, that while these were candidly discussing the more or less of power, which might be entrusted to the federal government without impairing the sovereignty of the states, there were some among them who deemed any such distribution of powers wholly impracticable. To them the very idea of state sovereignty was alternately an object of dread and of derision. To them it seemed "that the rod of Aaron must swallow up the rods of the magicians, or that the rods of the magicians would devour the rod of Aaron." I here use the language of one of the members of the convention which framed the constitution, as spoken in debate, and recorded by the hand of him who uttered it. To such gentlemen it seemed best to carry out the parable, in conformity with the scriptural account, and so to give the rods of the magicians to be devoured by the rod of Aaron.

It is no impeachment of the motives of such men to say, that in all attempts to adjust the balance of power, they were ever ready to throw their weight into the scale of the central government. Hence the warning voice of Patrick Henry was uttered to unheeding ears. The consequence has been that we have lived to experience the truth, so simple in its announcement, and in its application so little understood; and to learn that a government, however weak, having power to assume more power, has already too much. Overlooking this, we have fallen into an unsuspecting confidence in the sufficiency of the state governments to control federal usurpations, until the authority and name of the state governments have sunk into contempt, un-

der the overwhelming power of the government of the United States, and all the rights of a fixed local minority are held at the mercy of a fixed local majority, interested to plunder and oppress.

I have said that the error which has led to these consequences had its rise in a miscalculation of the force of the untried powers conferred by the constitution on the federal government. But there was, moreover, a fatally mistaken reliance on the pride of state sovereignty, and the attachment of the people to the authority and institutions of their states respectively.

In that day the primitive people of the ancient and respectable states of New England, cherished, in a spirit of exclusive appropriation, the honor of their descent from men, who, for conscience sake, had turned their backs on all the comforts of civilized life, on all the dear delights of home, and on all the hallowed scenes of their father land, to seek, in a savage wilderness, a sanctuary of the heart, where they might worship God in their own way. This was their *peculiar* boast and pride. In this the other states had no part. Far from it; for south of the Chesapeake they saw the descendants of the very men, with whom their ancestors had struggled, in their common country, for mastery, for property, for freedom, and for life.

In that day, the people of Pennsylvania still celebrated in their hearts the mild glories of their pacific triumphs over the savage race. To them, the success which had crowned their labor of love, and established them the peaceful and prosperous masters of a soil unstained by blood, was a source of exultation all their own.

Interposed between these, the state of New York still retained many of the features of her original character as a Dutch colony. The uncouth names, the habits, the manners, and, in some measure, the language of her people, distinguished them from their neighbors on either hand. Their traditional honors were those of another and a rival race. The triumphs of the Blakes and Boscawens of England, were not *their* boast. Their glory was in the achievements of De Ruyter and Van Tromp, in laurels plucked from the British crown, and in the long and doubtful struggle maintained with the British flag, for the mastery of the narrow seas.

Proudest of all, in that day, stood old VIRGINIA, vaunting her descent from the gallant cavaliers, who had poured out their blood like water in loyal devotion to an undeserving prince: who, when, all was lost, found refuge here—and here, in defiance of the parliament of England, offered an asylum to his worthless and ungrateful son. She had scarce then forgotten, when, in the provinces beyond the Delaware, she saw none but the Swede and the Hollander, and the lineal and devoted inheritor of the far-descended antipathy between the Round-head and the Cavalier. In that

*Patrick Henry lies buried in the county of Campbell in which the town of Lynchburg is situated.

day Virginia had not forgotten to boast that the love of liberty which then animated her, was a principle hardly more lofty and generous, than her steadfast and devoted loyalty in earlier times. It was her pride to reflect, that in all her struggles with power, no want of fidelity, no want of gratitude, no disregard of natural or covenanted obligations, and no defect of magnanimity, could be imputed to her. When the crown was torn from the head of Charles I. she had stood alone in her loyalty; she was the last to acknowledge the usurper; the last to submit to inevitable necessity, and the first to return to her allegiance, in defiance of a power before which Europe trembled. In the recent conflict she had not dishonored her old renown. Though foremost in the race of revolution, she had been the last to renounce her allegiance; and in this, her resolute fidelity to the crown, she saw a justification of her resistance to the usurpation of parliament, and her final renunciation of that relation to the king himself, to which he, by abetting that usurpation, had shown himself unfaithful. The men of that day did not need to be told that it was not on the fourth day of July, 1776, that Virginia first proclaimed her independence. What others then declared their purpose of doing, she had already done. It was on the twenty-ninth of the preceding month, that she, by her own separate act, completed the organization of her own separate government, and, taking her independent stand among the nations of the earth, put in operation that constitution under which we were born. No, gentlemen! the sons of Virginia in that day needed not that this proud chapter in her history should be read to them. In that day they looked not abroad for topics of exultation and themes of praise. Virginia had not then forgotten to claim the first of men as peculiarly her own. The voice of her Henry still sounded in her ears. The wisdom of her Mason still guided her councils. The rising splendor of her Jefferson still shone for her alone, and along her vallies the last dying echoes of the cannon of York-Town still reverberated. Look where she might, what was there of wisdom and greatness and virtue, in the history of man, to which her own annals might not furnish a parallel? How poor in comparison the boast of England's poetic moralist,

"That Chatham's language was his mother tongue,
And Wolfe's great name compatriot with his own!"

Was this an unwholesome and distempered pride? Ask your own hearts! Ask the history of Virginia, while cherishing these hallowed recollections, her sons, emulous of the example of their fathers, secured to her—not by numbers—not by wealth; but by intellectual pre-eminence—by moral worth—by magnanimous and self-renouncing devotion to the common weal—the first place in this vast confederacy!

But, gentlemen, with the wisdom or folly of

these feelings we have nothing now to do. Whether for good or ill, they have had their day. They have done their work, and their place is now among the things that are past. It is no longer in our choice to revive them if we would. *They are gone—FOREVER.*

But these sentiments, gentlemen, were among the elements with which the framers of our institutions had to do. In these they saw a principle of repulsion between the states, against which they deemed it necessary to provide. In doing this, they did not miscalculate the energy of this principle of state pride. They only mistook its duration. They did not deem it possible that the time should ever come, when, in the eyes of her own sons, Virginia in herself should be nothing; when the memory of her glorious deeds should be forgotten, and their anniversaries pass by unheeded; when her own proud banner should no longer float above her capitol; and when all her pride of sovereignty and independence should be habitually derided as the apery of children, doing the honors of the baby-house, and mimicking the airs of men and women.

These things may be foolish; but they were follies for which wise men made allowance. Their existence was taken into the account, and the balance of power was adjusted to them. They thus become an essential element in the constitution itself. They are like the follies and weaknesses and passions of man, which are a part of his nature, and to which God himself conforms and adapts his laws. They are as the centrifugal force in the planetary system, which, duly restrained by a counterpollent energy, preserves the order of the universe, and without which, all must tumble into shapeless ruin.

Is it not then our duty to cherish them? Do we not owe it to ourselves and our children, as well as to our ancestors, to cherish the memory of their virtues, and their noble deeds; to keep fresh in our minds the recollection of all that is glorious in the history of Virginia; to fan the flame of state pride in our hearts; to keep her independence and sovereignty ever present to our thoughts; to habituate ourselves not only to regard her as one of the bright stars of our federal constellation, but as, in and of herself, a sun, sole and self-poised in the firmament of the commonwealth of nations?

And shall they who cherish these sentiments, be denounced as hostile to the union of these states? Trust me, gentlemen, it is by these alone that the union itself can be preserved. It is by these alone that union can be prevented from degenerating into one vast consolidated despotism. There, as over the wide expanse of the Russian empire, the genius of arbitrary sway shall brood, until the free spirit of our Anglo-Saxon race shall burst its bonds, and, by forcible disruption, tear

asunder the whole incongruous mass, and cover this continent, like that of Europe, with the ruins of a mighty empire, broken up into kingdoms and states, implacable in mutual hate, embittered by the memory of former ties.

I repeat it, gentlemen; if we would avoid this fearful consummation, we must strive to renew in our minds the same sentiments which once made Virginia glorious, and which made her glory precious to her sons. And said I, that this attempt would now be vain? That the spirit of our fathers was no more among us, but gone, with their achievements, to the history of the past? O! gentlemen, can this be so? Can you look thus coldly on that past? Can we, in fancy, summon from the tomb the forms of the mighty dead, and shall not our hearts be kindled, and shall not our spirits burn within us, to emulate those who acted and suffered, that we might be free, honored and prosperous? Where do we find the brave in war, the wise in council, and the eloquent in debate, and Virginia's sons are not among the foremost? Are not the names of Washington and Henry, and Jefferson and Madison, and Marshall and Randolph, all *her property*? Are not these her jewels; and shall she, unlike the mother of the Gracchi, pine, because others may outshine her in such baubles as mere *gold* can buy? Can you consent to throw these honors into common stock, and to share your portion in Washington with the French of Louisiana, and the Dutch of New York, and the renegades from every corner of the earth, who swarm their great commercial cities, and call themselves *your countrymen* and *HIS*! What fellowship have we with those who change their country with their climate? The Virginian is a Virginian every where. In the wilds of the west, on the sands of Florida, on the shores of the Pacific—every where his heart turns to Virginia—every where he worships with his face toward the temple of freedom erected here. To us, who remain, it belongs to minister at the altar—to feed the flame—and, *if need be, to supply the sacrifice*. Do this, and Virginia will again be recognized as the mother of nations; as the guide and exemplar of the states that have sprung from her bosom, and been nourished by her substance. False to herself, and to the honor of the common origin, these will desert and spurn her. True to the memory of the illustrious dead, true to her old renown, her sons, from every realm, shall flock to her as to their tower of strength, and, in *her* hour of trial, if that hour shall come, shall stand around her, and guard her like a wall of fire.

CONSCIENCE.

Conscience is to the moral nature what common sense is to the intellectual. When it is lost, the victim of vice is a specimen of moral insanity.—*Hesperian*.

NEW VIEW OF THE SOLAR SYSTEM.

(CONTINUED.)

I have said, that the distances of the planets from the sun, and the velocity they have in their orbits, must be ascertained from *physical data*, very different from the means now employed. I have also said, that the progressive motion of the Sun must limit and equalize the progressive motion of the planets. But this has been denied, and the reason given, is, "that the different velocities of the planets which has been mathematically ascertained to exist, and about which no one at all acquainted with mathematics will now question, disproves your assertion—and without further proof on your part, the sun cannot be considered a progressive body; and your notion about the equal velocity of the planets must be discarded."

Now it is quite immaterial, as it respects my views of the solar system, whether the Sun is a stationary body, and the planets moving round him in orbits returning into themselves, or *he* a progressive body, and the planets moving round him in orbits not returning into themselves, *as to this* particular question. I shall, therefore, proceed at once to show that the planets must have the same velocity, even to a second of time, or their periods would be very different from what they are.

The European mathematicians say, that Mercury performs one period in eighty-seven days twenty-three hours—Venus in 224 days 17 hours. Then, for greater convenience, I will reduce these days or times to hours. Mercury's time will be 2,111 hours, and Venus' 5,393. Now divide the time of Venus by the time of Mercury:

$$\begin{array}{r} 2,111 \quad 5,393 \quad (21,171 \\ \underline{4,222} \\ 2,111 \\ \underline{1,171} \end{array}$$

Here then we have two periods for Mercury and nearly half of another, while Venus makes one. This is very plain, very simple, and very easily understood. But I will now give to Mercury 110,600 miles an hour in his path, and to Venus 81,000, as it is said to have been demonstrated, (and always *mathematically*, of course,) to be the real facts, and are so stated in our books, and so taught in our schools:

Mercury 2,111 hours.	Venus 5,393 hours.
110,000 miles.	81,000 miles.
<hr/>	<hr/>
232,310,000	5,393,000
	<hr/>
	43,144
	<hr/>
	436,833,000

If we divide the distance Venus moves to make one revolution, by the distance Mercury moves to make one, the result shows the error of the mathematicians in giving different velocities to these two bodies.

$$\begin{array}{r} 23,223,000 \quad 436,753 \quad (900 \quad 1,204,532 \\ \underline{232,220} \\ 204,532 \end{array}$$

By giving the velocities to these two planets, according to our mathematical teachers, Mercury would make but one revolution and part of another only, while Venus makes one. Whereas it is well known that Mercury actually makes two revolutions and nearly half of

another while Venus is performing one. Now, what is true of these two planets, is true of all the others; and whatever may be the real velocity of Mercury, is certainly the real velocity of all the other planets. Give to Venus the velocity given to Mercury, and then their periods correspond, and all is harmony; but give them different velocities, and the results cannot, by any correct mathematical process, by no conceivable arrangement of figures or numbers, be made to correspond and harmonize with the real facts as they exist in this our field of creation.

If we take the Earth and Jupiter, similar results will follow. The Earth makes one period in 8,766 hours, and Jupiter in 103,926. Then divide the time of Jupiter by the time of the Earth:

$$\begin{array}{r}
 8,766 \ 103,926 \ (117,500 \\
 \underline{8,766} \qquad \qquad \qquad 8,766 \\
 18,266 \\
 \underline{8,766} \\
 7,500 \\
 \underline{8,766}
 \end{array}$$

Here, also, we find that the number of the revolutions of the Earth, corresponds to a second of time to the real facts, as they exist in relation to these two planets, in the system, as it came from the hands of its Creator. Then what will be the result, if we take the mathematicians for our guide? If we give to the Earth 68,000 miles an hour in her path, she will move in 8,766 hours 596,088,000 miles in making one period; and if we give Jupiter 29,000 miles an hour, he will move in 103,926 hours 3,014,086,000 miles, to complete one of his periods. Then divide the distance run by Jupiter, by the distance run by the Earth:

$$\begin{array}{r}
 596,088,000 \ 3,014,086 \ 000 \ (533,646 \\
 \underline{2,980,440} \qquad \qquad \qquad 596,088 \\
 33,646 \\
 \underline{596,088}
 \end{array}$$

According to the mathematicians, then, the Earth ought to make but five revolutions and a fraction of another, while Jupiter makes one. Thus it is with all the other planets. Here I might say that the whole of the phenomena which we observe among the planets, proves beyond the reach of the mathematician, the infallibility of the *data* I here present, and that *triangulation* is an absolute absurdity when applied to the planetary bodies. The mathematicians are not only in error as to the distances of the planets from the Sun—they are most egregiously so as to the different velocities they have given them in their paths.

I have been latterly advised to submit my views to some of the learned in Europe: but why should I do this? Are we destitute of common sense in the United States? Are we still in leading strings? It is true I stand somewhat in relation to the Copernican system, as Copernicus himself did in relation to the system of the Egyptian astronomer; but with this difference, he had the ignorance of an unenlightened age to combat; whereas I am free to think, and in a land where the human mind is unfettered by either religious or political despotism. Then why appeal to foreigners? I

have said, the Earth is not more than 5,000,000 of miles from the Sun, nor is Jupiter more than 55,000,000, and that no one planet has a greater velocity in its orbit than another. This can be proved or disproved in the United States. There will certainly be no necessity for us to ask foreign aid.

But the four bodies which exist between the orbits of Mars and Jupiter, seem to have excited a very deep interest among the mathematicians of the present age. The phenomena they exhibit to the observers of their positions and motions, are so very different from all the other planets, that some of them agree that their motions, positions, and relative distances, together with the intersection of their orbits, constitutes a state of things entirely "inexplicable upon any known principles of science." Olbers and Brewster suppose these bodies to be fragments of an exploded planet, which occupied that region of space at some period of creation. My view of the solar system embraces this opinion—and I think I may safely say, that the *electro-magnet theory*, which I shall now soon present to the learned, will clear up all difficulties respecting these bodies, by showing *mathematically* why their orbits must necessarily intersect each other, and why their aphelion and perihelium distances are as necessarily so very different from each other, and from all the other planets. It is very certain that the principles upon which the mathematicians of the last and preceding century based their system, as projection and gravitation, will never solve the difficulties involved in the phenomena exhibited by these bodies.

MUSINGS OF NAPOLEON.

Some lines appeared several months ago in the *Messenger* suggested by a painting of Napoleon meditating on the rock of St. Helena. An engraving from the same painting gave rise to the following stanzas:—

For three-score moons, sepulchral isle,
There lived in thee a thinking man—
Lived, though his light, to fade the while,
With the first waning moon began.

And who was he, of mighty name?
He wore the earth's imperial wreath—
A spur of fire, a crest of flame,
And sword that never knew its sheath.

Tomb of the brave! thy rock-bound beach
Received a wreck: no other isle
His equal saw—then thou canst teach
How rainbow-like is fortune's smile.

What are his thoughts, 'twere vain to say—
That hov'ring sea-fowl cannot speak;
Nor can the clouds that roll all day,
Nor waves that chafe yon island bleak.

But yet he thinks: does Egypt's coast
Its Delta rise, or fruitless sands—
Aboukir's bay—or Turkish host—
Or are his thoughts on other lands?

Perhaps he thinks of that proud steed,
Who scorned, like him, the Alpine chain,
And bore him, with electric speed,
Down to Marengo's purple plain.

His thoughts may mount the Pyrenees,
And range to seats of Moorish power—
Alhambra's groves of orange trees,
Its gates of brass, and marble tower.

Or does he muse of that proud Czar
Who 'mid war's desolating storm,
The green-house burnt, from Gaul afar,
That might have kept his chaplet warm?

Or does he think how kings did try,
To rock his couch on Elba's steeps,
Till trump and drum urg'd on the cry?
Ambition dreams, but never sleeps.

Or does he gaze on Belgium's field,
Where England's rose blush'd crimson deep,
In Gallic blood—where chargers reeled,
And Albion's widows went to weep?

But thought may run in softer moods—
Of France, Rome's king, his empress queen—
Of lilies, brooks, or olive woods—
His old war steed 'mid pastures green;

Or shepherds' crook that rules the glen,
And bugle notes of gondolier,
Of grain reap'd down by rural men,
Or pilgrim songs of muleteer.

Or he may muse on cottage flowers,
That deck some Gallic peasant's home,
And vines that curl in summer hours,
Where the proud Seine is wont to roam.

Each hero paints some moral tale,
From Nimrod down to Charles the Swede;
Just as he ranks on glory's scale,
From India's floods to classic Tweed.

But many more to paint, 'tis thine,
Than eastern tribes could ever tell,
From Balbec's fame to Mecca's shrine,
Or else from Greece to France la belle.

And this shall last to latest time,
E'en when millennial flowers shall grow,
And holy poets weave their rhyme,
By winding Seine or classic Po.

And weary, sea-sick limbs shall leap,
To find yon isle of deep repose,
Where rests the man whose sword could sweep
From India's strand to Lapland's snows.

From Scottish glens or Palestine,
Shall pilgrims come—or from Peru—
And on the mound of him recline,
Who hither came from Waterloo:

Can herds of deer their huntsman bind?
Can trembling fawn or swift gazelle
Turn from the hills o'er which they wind,
And crush that huntsman's sounding shell?

Retire, great man—muse o'er the past;
Kneel to the King of Sea and Land:
He wove the chain that holds thee fast;
Its links are round his viewless hand.

At Waterloo—'tis thus we read—
A chapel stands; on that great day
Untouched: turn then devotion's bead—
This fact might teach all men to pray—

Or else thy blood-red sun goes down,
Nor leaves one charm of soft twilight,
No orange bloom, nor olive crown,
Nor evening star—but starless night!

But I forget (for fancy's spell,
A moment's space had made me dream,)
That death hath not yet tolled thy knell,
'Mid ocean's moan and sea-bird's scream.

H.

BENEFITS OF KNOWLEDGE ON MORALS.

(A continuation of the reply to the author of the essays on "The Influence of Morals.")

BY A NATIVE OF GOOCHLAND, VIRGINIA.

When all was pure and spotless, the earth a paradise, and the character of man unstained, virtue with an unflickering lamp lighted the path of duty. Now all has changed. The feelings and passions of the human bosom are perverted. And whether we view man as a poor outcast in the sandy and parched deserts of Arabia—a wanderer on the inhospitable shores of Kamtschatka—a solitary dweller amidst the splendid ruins of antiquity, or a denizen of some crowded and refined metropolis, we find him with a disposition to feel, think, and to act for himself. All other created things follow their appointed order and unvarying course, with no wandering from their orbits—no variations—no changes. The stars twinkle, and the flowers bud and bloom as they did in the earliest period of time. But man has been passing around the whole cycle of vices, ignorance and change. If now and then the philosophers have been sending forth their oracles of wisdom, as their only means of serving and enlightening their race, and of making the dreary path of man's pilgrimage eloquent with the voice of truth, too many have turned aside from the refreshing streams of knowledge, to quench their depraved thirsts with the muddy and unwholesome waters of ignorance and error.

Man is both an intellectual and a moral being. Gifted with the power of acquiring information of the character and condition of eternal objects, of events and facts, and of turning his thoughts towards the investigation of the influences which shape his own conduct, he can also mark out the connexions which exist between different states of things, and follow them to their conclusions. Minerva came all armed and grown up from Jupiter's brain, and was immediately admitted into the assembly of the gods, and made one of the most faithful counsellors of her father. Unlike the fabulous goddess of wisdom, mortals can only acquire

knowledge by incessant toil and labor. Every blessing is the reward of exertion. Only through labor comes improvement. A thousand precious jewels are scattered around us. There is good in every thing. The earth, and air, and sea, are rich with instructions to those that learn. Much is within the reach of the human intellect, if it will grasp after it. Much that will raise it high above the mouldering clods of earth. All creation, with its thousand marvels, is before us; and it is only for man to lift the veil, if he would be instructed in a steady course of wisdom and of virtue.

But there are some who contend, that the flame of knowledge never blazes up except amidst the ruins of morality and virtue. This cannot be its character. What is knowledge? Is it an instrument by which man is to be enslaved, and his mind is to be brought under the subjection of wild and crude dogmas? Is it the cultivation of sentiments, which are at variance with human happiness? or of principles which run counter to its interests? Does it familiarize the feelings to scenes of vice, and teach the heart to forget the inspirations of virtue, or to forego the pleasures of hope? Does it sing the siren's song—enchancing the hapless listener to destruction? Not This is not knowledge. Go to the monuments of true greatness and learn what it is. Read its history in the record of illustrious actions; in the works of philanthropists; in the triumphs of the patriot. It has gone through the world as a mighty conqueror, contending with power and embattled hosts; pulling down long established institutions, overthrowing dynasties, rooting out from the human bosom prejudices and bigotry, loosening the bonds of the oppressed, breaking the wand of despotism, opening a vast and wide field of thought and of intellectual enjoyment, in which thousands have reaped unadulterated happiness, and prepared themselves to benefit their race and their country. The tokens of its greatness are scattered every where. The traces of its glorious march are to be seen on land and on sea. It has bound green and never-fading wreaths around the brows of Galileo and Newton, Franklin and Fulton, Locke and Bacon, Howard and Wilberforce. One of the fathers of ancient philosophy beautifully represented truth as the body of God, and light as his shadow. Knowledge is truth. It is light issuing out of moral and intellectual darkness; a development of the mysteries of nature, and of the phenomena which are continually bewildering the ignorant, and leading them into errors. It illuminates the pages of religion, and offers to the mind the food which is necessary for the growth, nourishment and health of its faculties. Without it, man, who was made to soar amongst the stars, or to rest in the bosom of his God, and to act a noble and exalted part in that great drama in which all created things appear, whether beautiful flower or noxious weed, the machinations of vile insects, or the works of proud and immortal genius, whether the little speck of creation which is encompassed by our horizon, or the numberless worlds which roll far off in the wide expanse of the universe, will grovel in the dust, and add no illustration of the goodness and greatness of infinite wisdom, to the praises which every other created being will sing. If it be the duty and province of knowledge to refine and expand the faculties, and to give us right conceptions of the works of the physical and moral worlds, what then can be discovered in it

which is calculated to obliterate the sacred image of the great Creator, that, in his munificence, he had impressed upon man?

Nothing can be seen in our moral capacities and natures, that renders them unfit to be brought under the influence of knowledge. Man occupies a place in a great system of moral government, in which he bears certain relations to a moral governor, and certain others to the beings with whom he is associated. Arising out of this relationship, there are duties for him to perform. He is endowed with powers and feelings, which, if properly directed, will qualify him for his task. The will, however, is perverse and corrupt, and has a controlling power, in many cases, over the feelings and affections. They, too, in their turn, have a powerful and an overwhelming effect upon his determinations and resolutions. And when the affections and feelings are properly cultivated and directed, the will always partakes of their complexion. The appetites and desires, though depraved, can be controlled, and the result will be seen in the conduct. And the only inquiry for us to make is, whether an improvement of the intellectual faculties, and the knowledge which can be received through the powers of sensation and simple intellect, relating either to external objects or to mental phenomena, to our own actions, or to those of others, and the conclusions which are drawn from our observations, by the powers of reason, are calculated to contribute to man's purity as a moral being?

The mind, whether cultivated or not, has a great influence on the feelings. By our intellect we think and we plan. It is ever active and restless; now ranging through the world of realities, then sporting in one of its own creation. The feelings may prompt us to act, but every scheme of life must receive the sanction of the judgment. For what other purposes was this wonderful machinery of the human mind constructed? Was it formed for nothing? Is it possible that the most wonderful, and the most marvellous of all the works of creation, is a useless appendage to the economy of eternal wisdom? Every creature has its part to perform. The meanest animalcule fulfils its pre-ordered destiny. The annihilation of a single atom would violate the laws and disturb the arrangements of the universe. If it were possible to blot out the human intellect, and to efface from man that noble feature of his character, which enables him to think, to reason, and to acquire knowledge, what imagination could picture to itself, the wretched condition to which the human family would be reduced? Moral and accountable beings, with depraved inclinations and unhalloved passions, wandering through the world, like the maniac, with no torch of reason to illuminate their path of duty, no memory to bequeath to them happy recollections, no imagination to paint to them a blissful future! The extinction of the light of reason would not alter, in the least, their evil propensities. But the passions would be no less restrained. The noblest works of our race are, at best, poor and evanescent. They are heirs of decay and change. The mouldering relics of the tomb are the bitterest mocks of their futility. What then would man's noblest achievements be, without the light of knowledge to guide him? Frailer than the withered leaf of autumn before the chasing winds; frailer than a bubble floating on a rough and boisterous

ocean. And, no doubt, the writer on the Influence of Morals would revolt at the shocking idea of erasing from the human constitution its intellectual powers. Why then pursue such a course towards it, as is calculated to dry up its energies? It is a law of nature impressed upon every created thing, that it should be cultivated and improved, if man ever wants to make it subservient to his happiness. The earth must be dressed; the herb of the field must receive the culture of the husbandman; and the moral feelings must be trained up to a course of virtue. Why are the mental faculties to be suffered to run wild? Why are they to remain uncultivated and unexpanded? It would be in vain to search the annals of the human race for a single example of any good resulting from the prostration of the human intellect. It has ever been an expedient, by which tyrants and oppressors have forced submission to their cruel schemes. Ambitious and aspiring men have often taken advantage of the ignorance of the people, to enable them to fulfil their unholy purposes. What else enabled Mahomet to establish his system of religion, which has for ages held in bondage multitudes of human beings? Europe was sunk in the most profound ignorance and superstition; the people committed the most horrid crimes and disorders; and the ecclesiastics had gained the greatest ascendancy over the human mind; when the crusaders precipitated themselves upon Asia, and blackened the pages of history still deeper with the records of crimes and sufferings. Many of the greatest calamities that have befallen the world, have been perpetrated by the arts of delusion.

The sentiments which nations have entertained of man, and of all the mysteries of his nature, of the world and all its wonderful phenomena, as well as of its more ordinary and less surprising works, have uniformly been found to exert a great and lasting influence on their moral conduct, either for good or evil, according as these sentiments have been correct or erroneous. The importance of every duty which we have to perform, is heightened by a knowledge of the laws of the material universe, which are continually operating around us. From the meanest insect on which we tread, up to the planets revolving in their appointed orbits, we have full illustrations of the wisdom and utility of our duties.

Objects of sense always surround us; and the mind is kept in a great degree under the influence of external things. If, therefore, we have wrong conceptions of their characters and their importance, the influence will be felt in shaping our conduct. Hence sprang the wild and injurious theories of astrology. The most obvious impression of men, in a state of barbarism, would be, that the blue expanse was an arch of immeasurable dimensions, studded with brilliant spots, and erected as an ornament of our world. But, as the ignorant always ascribe motion to the immediate impulse given by some living being, this idea would soon be overturned; and as the easiest and simplest solution of the difficulty involved in every such appearance, they suppose life to be inherent in the body which moves. The dialect of every nation bears traces of this belief. Every motion of the air has been conceived to be the breathing of a spirit. To every stream, and glen, and hill, and to every shrub or tree, which the spring has clothed in beauty, has been allotted the vigil of a nymph. The naiad and the fawn have not only been

honored with the poet's dream, but the ignorant peasants have offered them many a lamb or kid, with libations of wine and honey. It was easy to observe, that the sun exerted a great power over the variations in the temperature and gravity of the atmosphere, and the fertility of the earth. Why should the planetary bodies be excluded from a share of the same dominion? or why not conceive that their influence is as great over the bodies and minds, the actions and fortunes of men, as the rule of the greater lights is over the vast kingdoms of the ocean, the air, and the earth? And as they have no apparent connection with the great changes, it may be their exclusive province to preside over the incidents which occur in the minuter portions of the world. The heavens, the ignorant have often considered as a divine volume, in whose lucid characters the skilful may read the various occurrences of human life. And this propensity to form wrong conceptions of external objects, which is so strong with the ignorant and unlettered, has drawn thousands off from the rightful performance of some of their most important duties; whilst, if they had sifted true knowledge of its dross, light would have been thrown around their path and dispelled the mists of error.

Improvement of the mental energies, and the cultivation of knowledge, necessarily opens a wide field, not only of enjoyment, but of incessant toil and labor also. It affords a boundless field of active and ceaseless employment. And the history of man shows, that when his reasoning and thinking faculties are suffered to remain idle, when his talents are unemployed, he is not only unable to give a good account of his stewardship, but also the animal feelings usurp control, and he comes under the dominion of the vilest and most unruly passions: for, man is an active being. He cannot remain stationary. He must either advance in virtue and improvement, or he must retrograde. And where knowledge is slighted, vicious habits will be formed, to fill up the vacant hours that should have been devoted to useful and innocent thoughts. And it is only by giving right directions to the mental energies, that the moral principles can recover that authority, which, amid the contests of passions, had been obscured or lost; or that each act of the life, and each emotion of the heart, is seen in its relations to the great dictates of truth, and each pursuit of mortals, in its real bearing on the great concerns of a moral being.

Virtue and correct morals are the essentials of human happiness. Without them, man's proudest achievements are nothing; and all of his works will wither up like the herb of the field, pass away like dew on the mountain, and fade from remembrance like the minions of change and chance. But when they are based upon virtue, they are throned above the fleeting things of time, above the bubbles of error and ignorance, and the flower that perishes; above the moon that waxes and then waneth in her course, or the stars which glitter and dazzle and then vanish! Where the light of reason is obscured, nations have ever been found wandering down to the dark and unfathomable abysses of crime. The lessons of the past teach nothing else. Of all the nations of antiquity, those only have left us any models of moral excellence worthy of imitation, who have held up high the torch of knowledge. Thousands have passed away, and no bright page is to be found

in all their annals. And the only token they have left, by which future times were to know that they have been, were the traces of enormous crimes. No mark of intellectual or moral worth is to be seen in all their borders. To what cemetery of the nations of antiquity do you go to drop a tear over illustrious merit? Only to that of the people who cultivated knowledge. It is there that you find the peaceful tomb of the patriot and the philanthropist. We look to the birth-places of the arts and sciences, and philosophy—to the lands of Socrates and Plato, of Solon and Aristides—to the country of Seneca, Brutus and of Tully, not only for the monuments of learning and intellectual achievements, but also for those of moral greatness. The literature of these countries constitutes the greenest spot that can be found in the dreary history of the past. It teaches many an instructive lesson, and gives a right direction to many a wandering thought. The spirit it breathes infuses vigor and life into many a desponding feeling, and inspires many languid imaginations. Precepts of virtue and morality are clothed in the divinest beauties of poesy, nursing those resplendent visions and sublime aspirations, that are so fit to lift us from sense and clay. If the disciples of Roman and Grecian philosophy did not carry their labors far enough to preserve them from the follies of life, they were greatly deterred from its vices. If their speculations did not enable them always to arrive at truth, they imparted much wholesome instruction, and inculcated many an excellent moral. If the feeble glimmerings of human reason have been unable to scatter all the mists of error and prejudice, they have been an important guide to adventurous man. And where now would be many a proud and glorious memento of human greatness and worth, of which humanity has often boasted, if all the nations, that have flourished and decayed, had acted upon the humiliating maxim, that it was unsafe for our moral character and condition to impart strength and vigor to the intellect? What other incentive, than the improvement of our rational and intellectual enjoyments, could ever have aroused the little spark of virtue which remained unsmothered in our ignorant and barbarous state into a bright flame, that will cast its light down to the remotest ages, and be forever the admiration of the world? Where would be the memory of Greece and Rome, if they had despised the cultivation of the reasoning faculties? There would be nought to tell that they had been. Nay! no song would ever have been sung of the blessings of these ancient republics. Why this declamation against reason? It is no enemy of humane and liberal institutions. It is not a dangerous instrument to truth. It is no corrupter of good morals. It is the only means of unlocking the treasures of religion. Without it, we can never reap the rich harvests of true virtue. What tongue can recount the dark and hideous crimes which are now perpetrated by many nations of the earth under the false and delusive hope, that they are rendering acceptable homage to virtue. Ignorance is the cause; and it has ever been the handmaid of vice. Ignorance is the opposite of knowledge. One is light, the other is darkness. Error is the twin-sister of bigotry. Who can stand on the bloody banks of the Ganges, amidst the human bones which whiten on its shores—now witnessing the cries of innocent sufferers, then appalled by the

self-approving deeds of superstition and error—and countenance for a single moment the belief, that the light of knowledge would not greatly stay the mad career of crime? Every where, among ignorant and unlettered nations, we can find examples of the same torch lighting the altar, and firing the stake of persecution. Knowledge enables us to understand the precepts of virtue, and to read the pages of religion. Without a discriminating and investigating mind, how are we, amidst the conflicting religious notions of the world, to tell truth from falsehood? It requires the refiner's furnace to separate the precious metal from the dross. The virgin ore lies buried beneath heaps of rubbish. Without skill and labor it is lost. Are we to have masters, whose business it shall be to instruct us in the way in which we should walk? Ah! the world has known enough of this sort of bondage. The mind has been chained, and the thoughts have been fettered. And where is the good that resulted? Can we find its history in legend, or in song? Where can you find one single trophy that it achieved for virtue, humanity, or religion, amidst its thousand bloody and cruel triumphs over the exertions of the patriot, and the aspirations of hope? Intellectual bondage never gathered one green laurel to weave in the chaplet of religion, but has fostered error, superstition, and bigotry, and given a powerful sway to men who have dishonored the cause of morality, who have thrown a foul stain upon the pages which record the history of the human heart, and have given a desolating impulse to the wave of licentiousness. Nor does ignorance teach humility. None are so presumptuous as the ignorant. It is the narrow contracted mind that is unable to soar above the clouds which surround it, or to comprehend the great bearing of truth, and that seizes hold of false notions and dangerous doctrines, becomes elated and arrogant, and scorns to be taught, and thus never comes under that gentle and soothing influence of knowledge, which would expand the thoughts, refine the feelings, and inculcate sentiments of liberality.

Untutored men have often been blessed with transcendent virtues. Around the cottage of the poor and unlearned, have bloomed the sweet and pure flowers of morality. David's harp breathed soft and heavenly melodies. It was strung by the finger of heaven, and the holiest inspiration swept over every chord. The peasant king was blessed above common mortals. And the circumstances of his life reflect not the smallest disparagement upon the importance of education. And where do you find so many examples of ignorant men being virtuous and useful citizens, as amongst enlightened and refined nations? Although they do not experience the direct, they do the indirect influences of knowledge. Here is its power. Here is one grand secret of that mighty charm which it possesses, and exerts over the happiness of the world. One exalted and enlightened intellect is clothed with power that can tell upon the fortunes and destinies of myriads; and is capable of wielding a sceptre over error and all of its evil attendants, and of laying those wholesome restraints upon the thoughts of men, which will save them from wandering amidst the creations of an impure and uncultivated imagination, where all is ignorance, where there is no landmark to guide to the pure waters of virtue and useful instruction, and where the thirsty and craving

appetites of mortals can only be allayed by tasting of the muddy and putrid streams of vice and licentiousness.

Many have converted knowledge into an instrument of evil. They have cultivated their faculties merely that they might be invested with power. They have sought only for the means of gratifying a wild and ruinous ambition. Self-aggrandizement was the sole object of all their labors. Their feelings were hardened against all the gentler influences of mental improvement, and they appear upon the pages of history as notable conquerors, or as vile and usurping despots. A corrupt heart urges them on in despite of every motive which is addressed to it. Virtue, religion, humanity, pleads in vain. The holy precepts of christianity are scorned. Nothing that is regarded as worthy of the admiration of intelligent beings, gives gratification to their corrupt and depraved propensities.

The evil is not to be attributed to the culture of the reasoning powers of man. The air we breathe often carries disease and death concealed in its bosom. There is no good that may not be perverted, no blessing that may not become an engine of incalculable mischief and evil. If the refinements and advantages of education were entirely unknown, the bad effects which flow from the conduct of wicked men would be the same as they are now. Nay, the power of shrewd and mischievous men, though unrefined and uncultivated, in communities as ignorant as themselves, is far greater in swaying the multitude to their purposes, than the power of any set of men can possibly be in enlightened communities. The cultivation of letters makes a thinking and reflecting people. It creates a spirit of investigation. Every action is scanned. The motives which produced it are analyzed. And the consequences which will flow from them are seen and estimated; and, if necessary, guarded against, long before the danger is inevitable. An ignorant people are almost sure to invest their heroes or aspiring men with the qualities of enchantment—with supernatural gifts—with the wand of a magician—or with any dangerous power which they may claim as belonging to their character. Let their object be the gratification of a wanton ambition, or the subversion of the liberties of their country, still they are looked upon as the great champions of human happiness; as beings commissioned by heaven to give order to our moral chaos, and to restore man to his long lost rights. It is thus that the most profligate wretches have been deified; and monuments have arisen to perpetuate their names and their deeds to future times, and to call forth the pious act of devotion from poor, deluded human sufferers. Men who have been mighty only for evil, whose only triumphs have been bloody ones over the sacred cause of humanity, have been remembered as the stern and uncompromising friends of virtue, and human improvement. So strong have been the effects of such sentiments with some nations, that it has required ages of improvement and intellectual cultivation, entirely to shake them off. The history of oppression sustains us in our position.

Does knowledge become an evil by the power which it gives bad men of staining and corrupting the literature of a country, and thereby polluting the fountain of pure morals? A Voltaire may propagate doctrines, alike subversive of morals and religion. A Bulwer

may excite the passions of those who have loose and unsettled principles, and who are ever eager to find out something that will administer gratification to their unhallowed lusts. For awhile, much evil may be produced by such perversions of talents. But, in free and enlightened communities, the triumph will only be momentary. And its ultimate tendency will be, to call into exercise energies that will wipe the foul stain from the character of literature, blot out the very remembrance of it, and that will vindicate from all aspersions the cause of outraged morals, and that will deck the holy sentiments of virtue in all the fascinating beauties of literature, in all those heavenly charms, which a pure and enlightened imagination can throw around a subject of such vital and intrinsic importance. Profligate writers are generally encouraged in their attacks upon the valuable institutions of society, by the corrupt manners and vitiated taste of the age in which they live. This gives them being and activity. And they take literature as the channel, through which the long confined and smothered up streams of corruption and vice may flow out. Not till then is the nature of the disease, which affects the morals of society, properly understood. All the symptoms are seen in the literature of the times. And has not the same channel always been effectually used to restore health, and to root out the very seeds of the evil? Literature reflects the moral sentiments of the age. It is a bright mirror in which are imaged forth, not merely the mighty efforts of some exalted intellects, but also the workings of the feelings of the mass of men. There is a secret yet powerful sympathy between an author, and every emotion that stirs in the hearts of that class of men, whose plaudits and admiration he is ambitious to gain. Every sentiment which is inculcated, that has any practical bearing on the moral conduct, is in unison with theirs, though the beauties of composition, the bold and vigorous flights of the imagination, and the soul-stirring eloquence are his. A licentious author meets with approbation from those, whose corrupt morals and dissolute principles prompted his genius. And most of the evil which results from his works, is felt by those who seek for them, that fuel may be added to the unholy flame of their passions. This exposition of the feelings and taste of society, enables the advocates of virtue to direct all their energies against the attempts which are made to undermine it. It points out how the remedy is to be applied, and where the evil is greatest. And unless every spark of true morality and patriotism is extinguished, by the same causes which called these works into being, the evil will be promptly and efficaciously opposed. So far then from literature's being an engine which bad men can convert into an instrument of incalculable harm and injury, it gives the clue to the dark and dangerous labyrinths of error and vice, in which the ignorant, the deluded, and the abandoned, may have been locked up for ages. It is the mutterings of the volcano, giving timely warning to all to flee for safety, before the long repressed and smothered fires shall break out, and the frightful wave of desolation shall sweep over the land, destroying every thing that is valuable in society, and leaving nothing but a barren waste behind. In England, until the commencement of the revolution, which ended in the beheading of Charles I., there had been very little freedom of thought or of

conscience. The sudden overthrow of established customs, and the sudden breaking of restraints, which had long fettered the soarings of genius, and prevented the consciences of men from exercising their proper offices, naturally led mankind into the opposite extreme, where the wholesome boundaries erected around virtue to guard it from licentiousness, were overleaped. After the restoration of the monarchy, the character of Charles II. served greatly to corrupt the literature of his time. From these concurrent circumstances, most of the celebrated writers of this age remain monuments of genius, perverted by indecency and bad taste. But this wretched state of literature soon called into exercise the chaste and splendid talents of Addison, Steele, Rowe, Prior, Akenside, Thomson, Pope, and of a number of others, who, in every department of literature, manifested a strong leaning towards whatever could conduce to purity of sentiment and delicacy of feeling, and whose works have rendered essential service to the cause of virtue and religion, and gained for themselves and their country imperishable renown.

Social man owes much of his dignity and happiness to a refined and chaste literature. Its power is more wonderful, than that of kings. Its achievements are mightier, than those of the warrior. The tokens of its blessings will be remembered, when the pyramids which stand as memorials of despotic oppression, shall have crumbled into dust. The green laurels, which wave over the tombs of Homer and Virgil, will ever be cultivated by an admiring world. The effects of a conqueror's triumph may be soon effaced—the blessings it dispensed soon cease to be enjoyed; whilst the immortal efforts of Newton and Locke, to elevate the reasoning faculties of man, to give a right direction to human thoughts, and to increase the sources of rational enjoyment, will be seen shaping the characters of thousands, as long as letters or knowledge shall endure. The works of corrupt men may last, until the excited passions which produced them shall have been subordinated in their evil tendencies, and shall have subsided. If mankind are allowed to think, and reflect, and to read for themselves, the literature of any age will be properly sifted; and all that is not calculated to improve the condition of humanity, and to contribute to the triumphs of truth over error, and of knowledge over ignorance and all its hurtful consequences, will be marked with the seal of reprobation. No work tending to corrupt public morals—to debase virtue, and to trample upon human nature—no matter how it may have flourished in the times when it was produced, and no matter what amount of mischief it may have effected, will meet with admiration in after ages, if the mind is left unfettered. No man, no matter how prone he is to taste the filthy waters of the streams of licentiousness, if he is left with a judgment unshackled, and capable of estimating the value of morals and social institutions, to the prosperity and happiness of his country, but will aid in consigning to oblivion every attempt to unsettle the foundations of society, and of human enjoyment. Virtue and religion are clothed in a thousand charms, which will challenge the respect and homage of every enlightened man, although the promptings of a vitiated taste and depraved moral feelings may have urged him into the whirlpool of vice. The waters of Lethe are not thus sprinkled on the works of Milton, or Locke, or Newton. They

increase in reputation and usefulness, as time rolls on; gathering fresh laurels in each successive generation; throwing around virtue a bright halo of glory; gaining for true and undefiled religion that honor and admiration which is so justly its due; and weaving, for the cause of oppressed humanity, a chaplet of never-fading reputation.

Woman is no less improved by the advancement of knowledge and letters, than man. The ignorance of barbarism must have yielded to the refinements of education, before she can be elevated to her proper station in society. To calculate the immense value of the progress of education to woman, we have merely to look at the history of her sufferings in all those countries where freedom of thought and inquiry have been prohibited. Wherever the dark and gloomy spirits of despotism and ignorance have brooded, there the record of her trials and hardships has been written in tears and blood. Wherever you can trace the footsteps of oppression, there you can find the vestiges of her wrongs and her crimes. Mental cultivation and the progress of literature have always refined the character of woman, and thrown around it those graces and ornaments, which have never failed to command respect and homage. The high and excellent qualities which recommend her to the admiration of every rational being, which qualify her to adorn and bless society, and counteract every virtuous sentiment that can tend to raise human nature above the lowering effects of vice, which enable her to smooth the rugged path of life, and to soothe all its sorrows, and which eminently fit her to encourage man to cling to every hope which will inspire the best emotions of fortitude, patriotism and religion, can only have their proper influence by the expansion of her faculties. From her very condition, when her mind is neglected, her energies are crippled, and the only power she has of winning esteem and affection becomes almost impotent. The achievements of Hannah More, Felicia Hemans, Maria Edgeworth, Miss Sedgwick, and Mrs. Sigourney, in the great causes of virtue and religion, would never have been performed, had it not been for the estimation in which literature is held by the good and reflecting portion of mankind; and the incalculable benefits, which these immortal spirits have done for the world, would never have been enjoyed. The works of these exalted women have not only gained for them a rich and precious reputation, and names that will be held in faithful remembrance as long as the memory shall perform its duty, but have also given a tone to the feelings of the female part of society, which will urge them on in a course of usefulness and honor, and operate as a beneficial check upon the licentious opinions of men, and as an encouragement to whatever can adorn the moral character. It may be, that the tendency of many literary efforts has been to lower our estimate of female virtue and dignity. If every instance of this sort, that can possibly be produced, were thoroughly investigated, we would perceive, that the literature of a country which had thus stooped from its high vocation, to injure and insult woman, had first been corrupted and polluted itself, by the powerful operation of causes which had extended their baneful influences to every human institution, poisoning every fountain of happiness, blasting every blossom of hope, leaving nothing untouched and unwithered. This opinion is strongly

supported by the events of the French revolution. For a long period the people of France had suffered the greatest civil and ecclesiastical oppression. The arm of civil power crushed the budding of liberty, and the minions of the pope smothered all those sacred feelings which would render homage to religion. All those who dared to think and act for themselves, suffered from the sword of persecution. The principles of morality and virtue were prostituted to vice, by the church of Rome. The civil power, instead of being the shield to protect, was the sword to destroy. Religion, instead of refining the moral feelings, was made to pamper the passions of a profligate priesthood. The torments of the inquisition were followed by the most horrid massacres, until, finally Louis XIV. revoked the sacred edict of Nantes, in consequence of which the protestant churches were destroyed throughout France; the soldiery committed the most scandalous excesses, and after the loss of an almost innumerable number, 50,000 of the most valuable and industrious of her citizens were forced into exile. These bloody and disastrous occurrences reduced nearly to nothing the number of those who inclined to the support of virtue and undefiled religion. Those who remained and who did not bow submissively to the wicked mandates of the catholic clergy, imbibed the deadliest prejudice and hatred towards religion, seeing what a wretched and corrupt thing it was, under the control and management of a vast and powerful establishment, that pretended to be the infallible guardian and keeper of the consciences and souls of men. The putrid condition of the political and religious atmospheres drove men into the gloomy labyrinths of anarchy and of skepticism. The contagion was not slow in spreading. It soon commenced heaving asunder the foundations of society. Rousseau, sickened with the thralldom of ancient prejudices, inveterate abuses, and the worst of slaveries, conceived the absurd notion of bettering the condition of man by throwing off the restraints of civilized society. The depraved heart of Voltaire, rendered outrageously wicked by the evils of a perverted religion, lauded the errors of infidelity. And the policy of the government and of the catholic church had been such; as to prevent any bold efforts being made to rescue the rising generation from the contagion of bad examples, and the influence of false principles. France felt the loss of those valuable citizens, who had been driven away by the tyranny of Louis XIV; and deism and infidelity, though weak against the plain doctrines of the cross and the evidences of christianity, were strong against the fanaticism of a bigoted, and the superstition of a corrupted church. The defence of religion and of social institutions fell into hands little capable of reaping laurels in a contest for the preservation of good morals or pure christianity. They were utterly unfit to contribute to such virtuous and intellectual triumphs, as had cast a bright and never-fading lustre on the names of Saurin and Massillon. In these unhallowed conflicts of infidelity and superstition, of fanaticism and bigotry, of anarchy and despotism, it was impossible for the character of woman to remain unassailed and uninjured. It would not have been otherwise, if knowledge and letters had been neglected; but the evils of ignorance superadded to the frightful workings of the worst passions of our nature, would have increased, beyond the conception of the boldest

imagination, the mischievous results. It is tracing the injury to the wrong cause, to contend that literature has degraded female excellence. Woman's countenance never shines so attractively as when it is irradiated with the light of knowledge. Her worth is only properly appreciated by such as have felt the softening and expanding effects of education. And under the balmy influences of mental improvement, and the soothing consolations of religion, woman will shine as cherubimically, and wing as seraphically, as "any of the redeemed on earth."

If female character has not always been exalted, as it should be amongst cultivated nations, it has been much less so where ignorance prevailed. And if even knowledge has not secured to her the enjoyment of her just rights and privileges, the cruel precepts of dark and barbarous ages have taken them all away. And the history of letters records not a single triumph that they ever gained over the gentler feelings of our nature, but forms one vast and splendid monument of the victories of morality and virtue over the most hurtful passions.

The warmest admirers of the expansion of our mental capacities never claimed, for knowledge and human letters, all those blessings and prerogatives which it is the province of religion only to bestow. They would not, for all the treasures of the world, supplant it in the affections of the people. Its heavenly principles only are adequate to raise man to his primitive condition, to root out those jarring and conflicting lusts which have hurled him down into the gloomy abysses of crime, filled the world with sufferings, and placed virtue and happiness far from the path of his sinful pilgrimage. Pure christianity is the greatest blessing that could have been granted to mortals. It is the pathway from earth to heaven. It leads from error to truth, from bondage to freedom, from crime to virtue, from despair to hope. Before its triumphant march the works of iniquity must crumble into dust, and the raging of human passions will become still. Religion can pour the healing balm into the corrupted heart, and administer the sweetest consolations. No! learning does not seek to usurp the place of true devotion. It bows reverently before the Bible and cries, "thou art worthy to receive all homage and adoration." Even human wisdom does not teach infidelity. Whilst nature and all her wonders and beauties, her green valleys and her rugged mountains, the gentle ripples of her streamlets and the roaring of her cataracts, the soft zephyr of evening and the whirling tornado, all, all point to the ruling hand of infinite goodness, and sing the praises of their Creator, knowledge decked in a thousand fascinating charms joins in the universal chorus. All the power that we contend for as belonging to human learning is, that by giving employment to our restless mental faculties, it will preserve us in a great measure from the follies and vices of life, restraining many an evil prompting, and preparing us better to appreciate the blessings of pure religion to make us more valuable citizens. Ignorance may be favorable for the growth of bigotry, superstition and fanaticism, but piety grows better in the sunshine of knowledge. And if the annals of the world are impartially examined, we will find, that the dear and costly experience of a thousand ages will teach, that it is the duty

of every patriot and good man, and especially of every christian, to use all his powers in disseminating useful information among the people, and to oppose every thing that would encourage ignorance.

The "native of Petersburg" can find nothing but poison in the fruit of the tree of knowledge. He points to the corruption of the antediluvian world as a signal proof of the unhallowed effects of a high degree of intelligence, and of the diffusion of knowledge. We in vain look for the evidences of his positions. Where are the facts from which his conclusions are drawn? If the race of men before the flood were more corrupt than the generations since, why attribute it to their superior understanding? Where are the monuments of their exalted wisdom? Swept from remembrance? Or did they only exist in the visions of a heated imagination? The inspired writer tells us, "there were giants in those days; mighty men which were of old, men of renown." The learned Thomas Scott supposes they were men of great stature, and celebrated for their deeds of wickedness, and their exploits as warriors. There are many causes which might have contributed to their unparalleled depravity. Yet, we are at a loss to conceive the reason why they should be considered superior in the powers of the intellect, to any of the other nations that have flourished on our earth; and even admitting that they were, there is no rational ground for us to believe, that knowledge increased the wickedness of their hearts. It was a depraved heart, and not an enlightened understanding, which imbrued the hands of Cain in his brother's blood. No voice of warning comes to us from the experience of the ages beyond the flood, teaching us to shun the consequences of education. The wreck of the antediluvian world was a lasting memorial of the dreadful evils of ignorance and crime. Man had tasted of the forbidden fruit which had rendered his will perverse, and had poisoned his moral constitution: and though the same act which had brought disease and vice into the world, had given to man, by the exercise of his reasoning and investigating powers, the means of acquiring knowledge, and of forming just conclusions of the tendency of actions, yet the effects of his fallen state were such as to obscure his high intellectual illumination, and to render nerveless all the energies of his character, the development of which is absolutely necessary for the attainment of any noble or exalted purpose. Perverse moral feelings bewildered and stupefied his mental qualities, and made them useless to the purposes of his being, until he was taught by the sad lessons of experience, by sufferings and by trials, to regard the admonitions of his judgments and the dictates of a sound understanding. And in the primitive ages the history of man proves, that, through the perversity of his will, he disregarded the warning voice of his own reason, as well as the revelation of heaven.

The writer, whose sentiments we have been opposing, thinks he perceives in the history of the son of David, to whom God had given "a wise and understanding heart, so that before him there was none like unto him, neither after him was there to arise any like unto him," the utter worthlessness of an enlightened understanding in exerting a salutary influence over the will. The giver of all good, who was well pleased at

the request of Solomon, did not thus slightly value the gifts which were granted him.

Considering man as an intellectual being, as the work of a great Creator who had bestowed upon him faculties, which he must develop and exercise to secure for himself happiness, and to render himself useful to society, we, far removed from the prejudices and passions which accompanied the breaking out of the reformation, rejoice in the blessings which have flowed from that remarkable occurrence. Amongst the thousand other blessings which it has dispensed, it has given a sure footing to freedom of thought and opinion, and thus greatly aided the cause of human improvement. If truth be the aliment of the soul, to teach it error is to deny it the proper nourishment. Error is the great enemy of man, and the malignant destroyer of all the excellences of his nature. It withers up the intellect, and man, whom it was sent to enlighten, sinks down to his kindred dust. For ages did the Catholic hierarchy dictate what the people were to believe, and bow they were to act; confining the speculations of philosophy within the limits of vulgar theory, and chaining the human mind down from its noble flights; attempting to raise an altar to God upon the ruins of the temple of science; and to veil in deeper mystery the wonderful works of creation. The inquisition, the pretended guardian of the christian faith, denounced the immortal Galileo as the abettor of irreligious opinions, and compelled the old astronomer to abjure the heresy of the earth's motion. What a mortifying picture of atrocious and unpardonable presumption! A venerable philosopher, with his head silvered over by the study of nature, forced to disavow, against reason and conscience, the great truths which he had published to the world, and which shone forth in every part of those heavens to which he appealed! An assembly of reverend cardinals, encircling the old man upon his knees, fixing the laws and arrangements of nature, repressing the great truths which she unfolds, and condemning to punishment, the mighty sage who first disclosed to man the unexplored regions of boundless space. We hope that such attempts to check the progress of the human intellect were the efforts of expiring bigotry. The progress of religious and civil freedom, since the reformation, has erected a strong barrier against such humiliating oppression. Religion and knowledge can now advance side by side, dispensing their blessings, elevating and exalting the condition of humanity.

Are we to be told by a Virginian, by a native of the land of Washington and Henry, the great champions of civil and religious freedom, that the reformers would have done more essential service for religion and mankind, by merely correcting the glaring abuses of the "ancient establishment," and by perpetuating its dominion, than by breaking the sceptre of its power, and leaving the mind free to exercise its faculties in finding out truth, and in detecting vice? Is it probable that it would be to the advantage of religion, liberty and humanity, if the guardian care and protection of his holiness, the pope, were extended to us? The struggles of the last three hundred years cannot have been in vain. The triumphs of freedom have not been bloody victories over virtue and religion. Hampden and Sidney, Washington and Lafayette, did not reap their rich

and imperishable rewards in contests for principles which were to corrupt and ruin their fellow men. The voice of humanity has proclaimed them to be the great benefactors of the world. The flight of time, and the succession of events throw nomists around their names. Every conflict of virtue, knowledge and patriotism gathers fresh flowers, to add to the unfading garland of their renown. Their works have left a bright track behind them for the admiration of all coming time, and are carrying light and liberty and happiness down into the dark regions of futurity. The final recompense for all their labor, and the coronal to all the visions and transports of their patriotism, is reserved for that period which is yet veiled in the womb of coming events, when the efforts of patriots shall have completely vanquished the power of despotism and slavery, when knowledge shall hold its triumphant banner, proudly floating over the last shattered forces of ignorance and error, when the mild influences of the gospel shall have bowed the vile lusts of men and of nations into the dust at the feet of Jesus, and its effulgent beams of light shall have formed the never-fading bow of hope and promise, in the last remnants of the dissipated storm of the passions, upon which mortals will gaze with admiration and delight forever.

It was better to suffer persecution at the hands of the Roman catholics for a season, than to remain forever in the lowest state of moral and intellectual degradation. The incense of a thousand different altars, which have been erected by the dictates of piety, is more acceptable than the offerings of hecatombs of lambs and heifers in the ancient and stupendous temple of bigotry, superstition, ignorance and licentiousness. Men never were designed to think and feel exactly alike; and all attempts to coerce them, have resulted in crime and bloodshed, and in the promulgation of the dark and destroying principles of infidelity.

Freedom of thought leads to investigation, and investigation brings to light objects which tend to arouse the energies. Intellectual excitement, then, is the result of the cultivation of knowledge. Is this excitement dangerous to the happiness and the social institutions of man? It has destroyed many an ancient system, and turned into dust the lofty columns of many a proud fabric. It has robbed ignorance of its enchantment, and acquired an immortality of fame for nations. It has led to the discovery of truths, which have exalted the condition of man as a rational being, and thrown light into the darkest corners of creation. It led Newton to bequeath a rich and invaluable legacy to all that should come after him. It led Columbus to discover the new world; and raised Franklin to a high eminence whence he was enabled greatly to disarm the storm of its terror, and to confound the enemies of human liberty. It led to the gushing forth of those lofty strains of Shakespeare, Homer, Dante and Milton, which flow on as if beneath the touch of an enchanter's wand, breathing heavenly melodies, singing undying songs to which man will listen with rapture, profit and ecstasy forever. Man being a restless, improvable being, the excitement of his rational faculties will urge him on in the pursuit of objects that will increase his happiness. Lethargy to him is a fatal disease. He must have action, or all his energies hasten at once to decay. As soon as the ease and the refinements of

luxury succeeded the ardor of patriotism, the thirst of military glory, the enthusiasm of liberty, in the Grecian states, we no longer look for those splendid examples of heroic virtue which we all delight to contemplate. The Grecians were enervated, and their greatness was remembered as a thing that *had been*. An unrestrained press and freedom of opinions, are not liable in a healthy state of society, to produce a frightful mental excitement. The principles of the reformation, of civil and ecclesiastical liberty, are more strongly rooted in the American soil than any where else. And yet, no author here has attempted to win a lasting name by injuring the institutions of his country, or by tearing down the temples of morality and religion. Their works will form a bright and never-fading leaf in the annals of literature. Virtue itself feels exalted because they have written, and their countrymen, for ages to come will be proud of their fame.

National greatness and importance depend upon the development of the resources, and the exercise of the powers of the nation. The moral and intellectual worth of a people, is their most valuable treasure, and is the richest inheritance for posterity. Knowledge opens before them the recorded experience of other ages, and points to the causes which led to the rise and to the fall of empires, and lifts a warning voice against licentiousness. And though poison is sometimes thrown into the sacred fountains of learning, shall they be abandoned, when we have the means of cleansing them of the evil? Every human thing is liable to injury and to corruption. All the works of nature yield to the destructive influence of time. The mountain falls, and cometh to nought. The river changes its course, and the sea its bed. The frail monuments of human greatness cannot escape the destroyer. The most stupendous efforts of physical power soon pass even from the recollection. Man's intellectual and moral struggles only, are endowed with any force to resist the encroachments of decay. They remain to tell the future what the past has been—to arouse the sleeping energies of patriotism, and to rekindle the fires of genius and virtue. If poor degraded Greece ever again rises above the ruins of her fall, the love of country, the emotions of heroic fortitude and the aspirations after the rewards of an honorable and useful life, will have been implanted in the bosom of her sons by the melodies of her poets and the songs of her minstrels, by the polished histories of her ancient renown, and by the eloquence of her orators. And if the world should ever again relapse into the moral and political darkness and degradation of the middle ages, the feelings of the philanthropist and the patriot, embodied in the works of literature, would be handed down to other times, and, when oppression was drunken with the brutalizing draughts of licentiousness, they would raise up a Bruce or a Tell, a Washington or a Lafayette, to assert the rights of outraged humanity, and to free the world from bondage.

FAME.

Fame is a dowerless virgin, whom one must wed from love, and not from lucre.—*Shen.*

LETTER FROM MALTA.

To the Editor of the Southern Literary Messenger.

Malta—its first settlement by the Phœnicians—afterwards by the Phœnicians, Greeks, Carthaginians, Romans, Vandals and Goths, Arabs, Normans, Germans, French and Spaniards—ceded by Charles V. to the knights—taken possession of by the order.

The question has not been unfrequently asked, whether Malta was situated in Europe or Africa. England, by a vote of her parliament, and for a political purpose, voted it to be in Europe, while for centuries the kings of Sicily always termed it one of their African possessions. Geologists have each in their turn, as might favor their views, stated it to have been originally joined with Sicily, or Africa; from its proximity, it might more naturally be said with the former, as Cape Passaros lies distant to the north only fifteen leagues, while Cape Bon, the nearest land of Africa, runs in a west-northwest direction, at a distance little less than two hundred miles. This is the sole reasoning of those who call it an European island. On the other hand, many who have given the subject their study, have asserted, that though it was more distant from Africa, yet the soundings to that continent were gradual, that it was peopled in ancient times by the Carthaginians, that the islanders have to this day the Arab features, and speak a dialect of a language, by which they make themselves easily understood by their Arab neighbors—and lastly, that the stratification of the whole southern border of the island, exactly corresponds with that of Barbary, which runs in the line of its direction. The decision one makes on this subject, is of no trifling importance to the better class of islanders; for, if Malta is in Europe, they are termed, in the broad sense of the word, Europeans; if in Africa, they are Arabs. Ptolemy has placed it in Africa, while Pliny and Strabo have given it a situation between the islands of Italy.

Malta is, in its historical recollections, far more celebrated than any other island in the Mediterranean. It will not compare with Sicily for fruits, with Candia for oil, with Scio for almonds, or Tenedos for wines—yet in sacred history they must all yield to that of Malta. Some writers have supposed that this island received its name from the Greeks, and that they called it Melita, by which denomination it was known for nearly two thousand years, from the fine quality of honey which to this day it produces. This supposition is most probably correct. Others have thought that it was called after Melita, the daughter of Nereus and Doris.

The most ancient writer who makes mention of Malta is Homer, and in his *Odyssey*, he terms it the "isle of Hyperia." According to tradition, it was at that period inhabited by the Phœnicians, a race of giants, who have left as their remains the tower at Goso, and the huge tombs now visible in the Benjemma mountains, which we may describe hereafter. These people colonized the island some fifteen hundred years before Christ, and enjoying as they did the chief navigation of this sea, it was to them of no little importance. They worshipped not only their own Gods, but also those of Egypt and Persia. They erected several temples, one in honor of Juno, as also others to Isis, Osiris

and Mercury. This last was the most revered, as he was thought to be the protector of their commerce, to which alone the isle of Hyperia owed its wealth and settlement.

By the Phœnicians the island was called Ogygia: it was governed by kings; and several coins, as also two monuments, are now visible in the museum of the Maltese library, which are of Punic origin, and covered with their characters. The Phœnicians having retained uninterrupted possession of Ogygia for nearly eight hundred years, were at last defeated and driven out by their Greek rivals, who colonized in their turn, and of whom no traces now exist, save in the ruins of a wall or fort built in honor of Phalaris, the tyrant, and some small sepulchral mounds, of which there is much doubt whether they are, or are not, of Grecian build. Wherever the Greeks made a conquest of a place, and formed a settlement, they always erected a temple to Apollo—one was built at Citta Vecchia, the site of which is now occupied as a public square, and will be pointed out by any Cicerone, although not a vestige remains to tell of the ancient ruins, which there for ages existed. During the period the Greeks had possession of Malta, they were first governed by a high priest whom they called Hierothites, and afterwards by archons vested with similar powers, as those who under the same name once presided at Athens. Through the kindness of the librarian of the Maltese library, I have seen several antiquities of these people, all of which are doubtless the remains of a much later date, than that of which we are now speaking: the most remarkable, is a small square altar, on which two figures are sculptured in the act of offering up to the goddess Proserpine (to whom the same was dedicated) a small fish—also a statue of Hercules, a naked figure, and of white marble, well executed, and in the highest state of preservation; several medals, the most of which have upon them the effigy of an Isis, or a Juno, with an ear of corn, expressive of the fertility of the soil: the word *Melaimios* is found on all which were shown to me.

About five hundred and twenty-eight years before the christian era, the Carthaginians made war with the Greeks, and conquered them. The conquerors permitted the inhabitants to retain their dwellings and worship their household gods. At this time, the Greek and Phœnician languages were equally spoken in the island.

In the first Punic war, Melita was attacked and plundered by Attilus Regulus, and seized upon by Cornelius. The Romans, however, did not long retain it. Some two hundred and forty years before Christ, the Carthaginians were again defeated by the Romans, and Malta a second time fell into the hands of its former masters—it having been stipulated in the treaty between the two powers that all the islands between Africa and Italy should be yielded to the conquerors. Sempronius, in the second Punic war, completely established the Roman power at Malta.

Two pieces of marble are the only remains which the Carthaginians have left us, supposed to have been the base, and shaft of a chandelier, on each of which there is an inscription in the Greek and Phœnician language. We are indebted to the learned Abbe Barthélemy for the only good translation, which runs as follows:

"We Abdassar and Asseremor, the sons of Asseremor, the son of Abdassar, having made this vow to our Lord Melere, the tutelar divinity of Tyre, may he bless and guide us in our uncertain way, Dionysius and Serapion, of the city of Tyre, the sons of Serapion to Hercules, surnamed Archegetes." It is thought that those who made this vow were seamen, and prayed for a continuance of prosperous voyages.

The Romans soon became aware of the importance of the island, serving as it did to prevent the encroachments of the infidels, and to afford an easy and safe shelter to their shipping. They made use of all the means in their power to retain it, granting to the Greek inhabitants a continuance of all their ancient customs, and permitting them to be governed by their own laws. They particularly encouraged commerce and manufactures: linen cloths were brought to such fineness, that they were exported to Rome, and considered by these enervated people as a great article of luxury. They beautified and adorned the temples, offered incense to the protecting gods of the island and their trade, and made the altars of those gods respected. In excavating, some twenty years ago, at the head of the great harbor, the Roman remains of a vast mole were found, which once bounded the fort; and very latterly, indeed within the last two months, while the workmen were engaged in digging a place to serve as a foundation for the monument which is now being erected to the memory of the late respected Major General Sir Frederick Ponsonby, they came upon a pavement which well answered their purpose, and which was doubtless of Roman build, and perhaps the ruins of a temple. The stones were laid in that shape, which induced all who saw them to entertain this belief. The Romans have left us, as evidences of their rule at Malta, many medals, a few inscriptions, and a couple of statues, the head of Augustus in basso relievo, and the bust of Antonius, sculptured from native stone. Their inscriptions make mention only of the repairs of the temple of Proserpine and Apollo, and the enlargement of their theatre. The medals bear upon them the head of Juno, the Latin word *Meditation*—while on the reverse is a triumphal chain with a Roman inscription. I had almost neglected to mention an antiquity which is, of all the Roman remains, the most solemn and interesting—it is a large sepulchral lamp, of a singular shape, beautifully and curiously made. It was discovered some two hundred years ago, and is now exhibited in the public museum.

The Roman empire being dismembered, the Vandals, in 455, took possession of Malta, and retained it ten years, when they were driven out by the Goths, who remained as rulers for several centuries: while these people governed, the temples were plundered, and the commerce destroyed. Very little is to be met with at this day, which may serve to bring to our recollection of the dominion of the Goths; a small inscription in the church of St. Agatha in the old city is indeed their only monument.

Belisarius, who was sent by the Emperor Justinian to wrest Africa from the Vandals, landed at Malta in 553, took possession, and united it to the Roman empire. Under this protection, the inhabitants became wealthy—the emperors, however, did not allow to the

inhabitants the same commercial advantages which they enjoyed under the ancient Romans, and the island never became so celebrated, as it was ages before, when under the government of the same power. It is said the Greeks, who at this period divided the trade, were an abandoned people, having none of the virtues of their ancestors, but cursed with all their pride, extravagance, and follies: these traits of character drew upon them the enmity of the other inhabitants, who on an opportune occasion, sacrificed them to the Arabs. During the long period of three hundred years, from the time of Justinian to the conquest of the island by the Arabs, we have only, as remains, a half defaced inscription, and a small and singularly made figure of bronze: it represents a youth kneeling, with his arms extended, and in his hands a small bowl; the whole figure is covered with Greek, Etruscan, and unknown characters, and is prized by the lovers of antiquity as a rare, an interesting, and a valuable curiosity. The Greeks, after many years of the most servile oppression, rose, retook the island, and held possession for thirty-four years, when they were in their turn again defeated, and by this conquest, their power was most effectually destroyed. The Arabs killed all those who by age were capable of bearing arms, and disposed of the women and children as slaves. These barbarians treated all the other inhabitants with lenity, paid a proper respect to the christian religion, and imposed no taxes on the people. Not a long time ago, the Baron Zara had in his possession a large sepulchral stone, which was entirely covered with an Arabian inscription, and the Marquis Barbaro still retains in his museum some golden coins of Arab circulation.

Anno Domini one thousand and ninety, the Normans conquered the island, and permitted those of the Arabs, who wished to leave, to carry with them all their property. Those who remained, enjoyed their religion by the payment of a small tribute. Count Roger, who made this conquest, has left us some coins, with his arms upon them: this nobleman, after making a treaty with the barbarians that all christian slaves captured at sea by their corsairs should not be held in bondage, returned to Sicily. In 1224, Frederick II. made a conquest of Celano, in Calabria, and sent the prisoners he made in that province as exiles to Malta. For seventy-two years the Maltese were subjects of the emperors of Germany.

Fortune next threw the island into the hands of Charles of Anjou, who was king of Sicily; it was not, however, long held in his possession, although it remained for a few years subject to the French government—the brother of Charles being at that period Louis IX. king of France.

In 1298, Corneille, who commanded the French fleet cruising off Malta, was attacked by Roger, an Arragonian admiral, defeated and killed: the victors landed, took possession of the island, the inhabitants having made no resistance. Charles made an attempt to reconquer it, but his fleet was dispersed, and the empire of his enemies firmly established. Pious foundations are the only remains, which the Norman, German, and French princes have left us of their government. From this time, and indeed for a period of one hundred and thirty years, little is recorded on the page of history, which would be interesting for the general reader to

peruse—it mentions only of the tyranny practised by the rulers, who were sent by the kings of Arragon and Castile to govern the Maltese, and of the islanders having subscribed, in 1428, thirty thousand florins, to have the islands annexed by king Alphonso, to the kingdom of Sicily.

PART II.

In the preceding chapter we have given a brief statement of the history of Malta, from its first settlement, some fifteen hundred years before Christ, until the period when it was permanently annexed to the kingdom of Sicily. While doing this, we have had recourse to several works, all of which are acknowledged to be very imperfect: it appears as if each author, had studied to contradict the statements of the other. Wherever we have observed any thing which we thought might be interesting, we have copied it; and for the historical notices we are chiefly indebted to the volumes of Boisgelin and Vertot, both of whom were knights, and consequently in all their feelings prejudiced in favor of the order.

The island of Malta is but a rock of limestone, and were it not that veins of granite and marble had been found in the vicinity of the Benjemma hills, which extend from Valetta in a north-west direction, it might literally be said throughout its whole extent to be of the same soft species. The soil has been made by the islanders, and nothing can be more erroneous than the assertion given by Brydone, that the earth was originally brought from Sicily. In Hennen's topography, we have noticed a long and interesting article on the manufacture of the soil, which we should like to quote entire, as given from the pen of Dr. Tully; we shall, however, content ourselves with briefly noticing it at present, and turn to it again hereafter: we have often witnessed the process, and can vouch for its veracity.

A countryman wishing to make a barren rocky surface a cultivated plat of earth, commences by breaking up the stones which lie on the surface, and for a depth of some six inches. This fine powder is carefully laid aside and mixed with the calcareous earth, which is invariably found under the first layer of stone—a half acre, which is the avarege size of a field, cleared in this way, is then covered with this artificial soil. By the assistance of manure, "and by its great aptitude in its new form to the absorption of moisture from the atmosphere, its bulk very perceptibly increases, and soon forms a sort of concrete texture." Watermelons and cucumbers, requiring the least nourishment, are first raised, and will flourish the succeeding season—"corn is the usual growth of the third year;" and it is by this, and similar processes that by far the greater part of Malta and Goso has been brought into a state of cultivation, and the soil been found so rich, that although only of a few inches depth, it will produce to the husbandman its two and three yearly crops, as a just reward for his toil and labors. It is a common conversation here with the countrymen, of their "ever-producing soil;" and a most happy thing it is for the Maltese, for had not nature ordained it so, many more instances would be noted of the death of the poor from absolute starvation.

In the early part of 1525, when the knights were wanderers in different parts of Europe, the king of Sicily proposed, should the inhabitants consent, to yield them Malta for their habitation. L'Isle Adam, the celebrated grand-master of Rhodian memory, in June of the same year, sent eight commissioners to explore the rock, and report on their return, whether it would be a suitable place of residence, or, in other words, he might have said banishment, for it could be but little less to them, who had for so many years been enjoying every luxury on a fertile island, and dwelling at the same time in the beautifully built and strongly fortified city of Rhodes. The emissaries at this period flattered themselves, as did the grand-master, that with the promised assistance of galley slaves from France, of money from Spain, and artillery from England, they should be enabled to make a successful attack on Rhodes, and drive the infidels from the city. The report which they drew up was therefore any thing but flattering. They stated that the island of Malta was merely a rock of a soft sand stone called tufa, about six or seven leagues long, and three or four broad; that the surface was scarcely covered with more than three or four feet of earth, which was likewise stony, and very unfit to grow corn and other grain, though it produced abundance of figs, melons, and different fruits; that the principal trade of the island consisted in cotton, and cummin, which the inhabitants exchanged for grain; that except a few springs in the middle of the island, there was no running water, nor even wells—the want of which the inhabitants supplied with cisterns; that wood was so scarce as to be sold by the pound—which forced them to use wild thistles, for dressing food; that the island contained about twelve thousand inhabitants—of both sexes—the greatest part of whom were poor and miserable, owing to the barrenness of the soil; and, in a word, that a residence at Malta appeared extremely disagreeable, indeed almost insupportable, especially in summer. Such was the state of this island, as reported by these commissioners upwards of three hundred years ago. Indeed, it was so discouraging that the L'Isle Adam wept while giving a perusal to the document, which gave him the unwelcome intelligence. The grand-master found, that the promised succors were not forthcoming—his treasury empty—the strength of the order greatly reduced, by the number of those who had fallen in fair fight against the Turks, and by those who were deceased from the plague on their voyage to Europe; with all these accumulated misfortunes on his memory, he exclaimed in full council, "must I survive the loss of Rhodes for no other end than to be a witness, and that at this period of my life, of the scattering and perhaps the utter ruin of an order, whose institution is of so sacred a nature, and whose government is confided to me?"

It singularly happened that this illustrious old man had hardly ceased speaking, when the commander Bonin, a brave man, who had been sent by the grandmaster to Rhodes to discover the strength of the Turkish garrison, and what chance there might be of success should an attack be made, returned, and on his entry, all present knew by his fallen countenance, even before he spoke, that nothing could be hoped from his statement to authorise the attempt.

It appeared that the project which the grand-master

entertained had been too long delayed, and that the same having been made known at Constantinople, the grand seignor had immediately changed the garrison, and put several christians to death, in the city whom he suspected of having favored the design. It was with the utmost difficulty, and when beset with dangers, that the commander Bosio himself, found means to escape the strict search which had been made by order of the governor. The knights having heard this report, with common consent, abandoned all hopes of ever again recapturing Rhodes, and turned their attention to the other places which had been named, and which by conquest or grant would be suitable for a seat and residence of the order.

Bosio, who was ever warm and enterprising in those things in which the interests of his order were concerned, had been, on his return from Rhodes, to Modon, a city of the Morea, where he found two Greeks by birth, but Turks by profession, who were filling the highest places in the town—the one, by name Cajolan, had command of the fort, the other was chief director of the customs, and also master of the gate of the mole. These renegades, on being written to, came at night on board the commander's ship. "Bosio found them thoroughly penitent for their fault in having changed their religion, and resolved to atone for it though at the expense of their lives." After various consultations, during which many plans had been devised, it was at last arranged as follows: On a certain day a number of merchant vessels should arrive in the harbor, each containing some three score of the order; that during the night they should all be landed, some being admitted by Cajolan into the tower which protected the fort, while the others should pass through the marine gate, kill the guard, and enter the town. While this was going on, a cannon shot should serve as a signal for the christian fleet, which should be at anchor behind the neighboring island of Sapienza, to approach, bombard the city, and send reinforcements to assist the attacking party. This was a favorite project with the French knights, who it appeared would rather fight for Modon than take quiet possession of the islands of Malta and Goso. L'Isle Adam, however, who was a man of sound judgment, preferred a certain settlement, to one which was to be gained by conquest, and proposed—which after a long discussion was unanimously agreed to—that Bosio should be sent as ambassador to Rome, to request the pope, who had been one of the order, to exert his influence with the emperor Charles V., he having been named by him, as "arbitrator of the conditions, and terms of the feoffment."

It appears that the emperor did not wish to yield the islands, "unless the body of the order would take an oath of fidelity to him, in quality of its sovereign—that a new creation should be made of a second bailiff of the language of Castile—that in the admiral's absence, none but a knight of the language of Italy should command the galleys—and, lastly, that the city of Tripoli, on the coast of Barbary, should be taken possession of by the order, and be defended by them against the attacks of the infidels. Bosio after having fulfilled his embassy to Rome, and at the suggestion of the pope, continued on to Madrid, where on his arrival he called on the emperor, and stated that

with the terms proposed by him it was impossible for the knights to accept of the islands—giving as their reasons, "that although they were all born subjects of different powers, yet the order in general by its profession was independent of any one; that the only view of the institution was to defend all christians alike against the incursions of the infidels; that for so many years as the order had existed with some kind of glory, it had never yet been known to engage against any christian prince in favor of another—and with regard to Tripoli, they stated that sending knights to defend so weak a place, surrounded as it was by barbarians and infidels, was little better than sending them to the slaughter." The pope also took this occasion to recommend to the emperor, in the strongest terms, the interests of the order of St. John—stating that "he had been brought up in it, and considered it in a manner as his second family."

Though the emperor was not easily caught with solicitations, in which his interest was not concerned, yet being reconciled with the pope, he observed it was impossible to refuse him any thing—and it is affirmed that the house of Medicis and the order of St. John, owe their re-establishment to the exertions of Clement, who was at that period at the head of the Romish church.

On the twenty-sixth of October, 1530, L'Isle Adam, with his council and chief commanders, arrived and anchored in the great harbor of Malta. On landing, they went immediately to the parochial church of St. Lawrence, in which they performed divine service; this ceremony being finished, the grand-master entered the town situated at the foot of the castle of St. Angelo, which was composed of wretched hovels, and tenanted by people of the most savage and rustic appearance. Not a house could be found suitable as a residence for the grand-master—this, in connection with the barrenness of the soil, the poverty of the inhabitants, the want of bread, which they could only procure from Sicily, and no place of defence in case they should be attacked, grievously afflicted L'Isle Adam, more especially when he thought of Rhodes, so fruitful in corn, so rich by its fleets, and armaments, and moreover the capital of six other islands, the most inconsiderable of which was better fortified than Malta. Eight years had expired from the time the order was driven from Rhodes to the period when it was established at Malta, and during this long term the knights had been residents at Candia, Messina, Civita Vecchia, Viterbo, Nice, Villa Franca, and Sicily.

These continued movements were attended with much expense, and had not Charles, the emperor of Spain and king of Sicily, granted the islands of Malta and Goro as opportunely as he did, as a habitation of the order, the probability is, that with a drained treasury, and their spirits broken, each knight would have returned to his home, and as a body that these men would never have been more celebrated for their deeds in arms, and for the services which they afterwards so effectually rendered to the christian world, while for nearly three hundred years they waged an almost unceasing war with their infidel enemies.

Malta, May 20th, 1866.

SCIENTIÆ MISCELLANEA.—No. V.

TENDENCIES.

We often observe in the growth of natural objects, a tendency towards a certain form, which they seldom if ever assume. In the common language of natural history, they are said "to affect certain forms." I do not know a better illustration of this remark, than is afforded in the growth of plants. Plants affect a perfect regularity of form—a regularity which shall extend not only to the form and position of their leaves and boughs, but also to the angles at which they are joined together. Could the trees of the forest effect that which they only affect, instead of that endless variety with which they now delight the eye, they would present a stiff and monotonous regularity, as if jointed and morticed together by the hand of an artist. Then might a fanciful man, find, indeed, some foundation for a figure used by a celebrated American botanist, who has spoken of trees as "cities of leaves." This tendency of plants to assume a perfect regularity in their growth, is manifested in several ways. If we examine one as it first springs from the ground—a young peach-tree, for example—we will find that it has two large fleshy leaves, placed exactly opposite to each other, and perfectly alike in color, structure, &c. The shoot which is to become the future tree, springs from between them in a direction perpendicular to the earth's surface. If we wait until it has developed its leaves, and then again examine it, we will find the second leaf just one quarter of the way around the stem from the first, and measuring up the stem a little more than half way between the first and the third. The same will be found to be true respecting all the other leaves. If I may be allowed the use of such language, the difference of longitude between each two consecutive leaves is 90 degrees; whilst the difference of latitude is a little more than half the distance between the leaf below, and the leaf above the one from which we measure. During the months of July and August, at the point where each leaf is inserted into the stem, a bud is formed, the embryo of a future bough. By carefully dissecting one of these buds, and examining with a microscope, the whole of the bough, so far as it is destined to be developed by the next year's growth, may be discovered in miniature; each leaf carefully folded over the one below it, and all packed away within four hard scales, intended to afford them protection from the frosts and storms of winter. By carefully examining this bud, we will discover that the same perfect regularity is provided for, in the growth of the next set of branches, which characterised the first year's shoot. And yet this perfect regularity is never attained. In some trees a nearer approach is made to it than in others, but all present greater or less irregularities.

These irregularities result from the action of what a naturalist calls "disturbing causes." I will mention and illustrate the action of one or two of these. Let us suppose that the young tree is growing in a perfectly perpendicular direction—its stem is possessed of a certain degree of elasticity—if bent by a slight wind it soon recovers, but by a stormy wind it may be so far bent as not to be able to restore itself, and thus a permanent crook may be given to the stem. Again, let us suppose that the buds are all formed at the proper time, and in their proper places, and that all are carefully wrapped up to defend them against the inclemency of winter. Of these buds it is not probable that more than one-half will survive to open at the call of spring. The most insignificant circumstance may determine which shall perish, and which survive. Even the insinuation of a drop of water beneath its scaly covering, may destroy a bud, and thus give rise to an irregularity in the form of the future tree. Let us take the case of a shoot on which eight buds had been formed at the close of summer, and suppose that one-half of these are destroyed during the succeeding winter; it is a coincidence hardly to be expected that these should be either the first, third, fifth and seventh, or the second, fourth, sixth and eighth; and yet all this would be necessary in order to preserve a perfect regularity of form to the tree.

An insect may destroy a bud, or even a whole bough. Many insects are taught by instinct to pierce the bark of certain plants, and there to deposit their eggs. Where this is the case, the part pierced swells up, and a complete derangement ensues. The nut-gall, and the common green ball, seen on the leaves of some species of oak, are produced in this way. If we suppose that the growth of the plant was perfectly regular before, and that no deleterious influence is exerted upon the wounded part by the sting of the insect, yet as each bough receives an equal portion of the nourishment taken in by the root; and as a part of that received by the wounded branch is necessarily employed in forming the excrescence, there must be less left for increasing the size of that bough; and thus an irregularity is produced.

Many other of these disturbing causes might be mentioned, but these I deem sufficient for the purpose of illustration. By far the greater part of them act more powerfully during the winter than during the summer; and hence perennial plants are much more irregular in their structure, than annuals; and those which grow slowly, than those which grow rapidly. All plants, however, are more or less irregular, not because they do not affect perfect regularity of form, but because they are never exempted entirely from the operation of disturbing agencies. And yet their ideal regularity is very seldom so far departed from, as

to unfit them for performing the part assigned them in the economy of creation. It generally happens, that about as many buds are destroyed on one side a tree, as on the other; seldom if ever does it become so one-sided as to be broken off, and fall by its own weight.

What is particularly worthy of remark in this matter, is, that with every thing tending to a stiff and formal regularity, such an infinite variety has been made to spring up and delight the eye, by what may be called the incidental operation of causes, whose chief end is to produce results with which the vegetable kingdom is in no way connected. This, I think, may fairly be cited as an instance of economy in creation. So universal is the operation of these "disturbing agencies," and so endless the variety of form which results from them, that we might search the world over in vain to find two trees precisely similar in shape. In fact I do not know but that I may say, without laying myself open to the charge of extravagance, that there never have been two such trees upon the surface of our globe.

A remark or two by way of applying this to settle a question of taste. A little more than half a century since, it was the fashion in England to trim trees in the form of cubes, spheres, pyramids, cones, &c. &c. If my memory does not deceive me, I have noticed in a few instances, something of this same taste in this our good state of Virginia. Such taste might, perhaps, be tolerated in the neighborhood of those mountains in China, which on the authority of Osbeck, quoted by Malte-Brun, we believe, to "have the forms of the heads of dragons, tigers, bears," &c.; or even in En-vionne, in the Valais, where their principal mountain resembles the old French frizzled wig; but in this land, which nature has made the depository of many of her grandest works, it is intolerable. For my own part, I had much rather see the same number of green boxes or barrels, mounted upon poles, than these distorted caricatures of trees. It was a taste of this kind which Goldsmith intended to ridicule in his story of the seven sisters of the Flamborough family, who, on having their likenesses taken, each one was painted smelling an orange. Should any of my readers feel inclined to ornament the outsides of their dwellings with trees, trimmed in the style just mentioned, I hope they will improve upon the hint given them by Gokl-smith, and ornament the inside after the manner of the Flamborough family.

No. VI.

SUPERIORITY CONFERRED BY SCIENCE.

"A shopkeeper in China sold to the purser of a ship a quantity of distilled spirits according to a sample shown; but not standing in awe of con-science, he afterwards, in the privacy of his store-

house, added a certain quantity of water to each cask. The spirit having been delivered on board, and tried by the hydrometer, was discovered to be wanting in strength. When the vender was charged with the intended fraud, he at first denied it, for he knew of no human means which could have made the discovery; but on the exact quantity of water which had been mixed, being specified, a superstitious dread seized him, and having confessed his roguery, he made ample amends."

The above is one instance among many which might be mentioned, of the advantage which scientific knowledge gives its possessor over the ignorant. Whilst the philosopher in his study is engaged in the laborious investigation of abstract truths, the question is often asked "cui bono?" But when the results of his investigations are applied to the affairs of real life, their benefit is at once evident. Perhaps one or two instances more may set this truth in a stronger light.

"On mount Pilatus, near lake Luzerne, is a valuable growth of fir trees, which on account of the inaccessible nature of the mountain had remained for ages uninjured, until within a few years a German engineer contrived to construct a trough in the form of an inclined plane, by which these trees are made to descend by their own weight, through a space of eight miles, from the side of the mountain to the margin of the lake. Although the average declivity is no more than about one foot in seventeen, and the route often circuitous, and sometimes horizontal, yet so great is the acceleration, that a tree descends the whole distance in the short space of six minutes. To the spectator standing by the side of the trough, at first is heard, on the approach of the tree, a roaring noise, becoming louder and louder; the tree comes in sight at the distance of half a mile, and in an instant afterwards shoots past with the noise of thunder, and almost with the rapidity of an arrow. But for the knowledge of the inclined plane, which this German engineer had previously acquired, such a work as this would have appeared impossible."

The chronometer, a species of watch constructed to go with great accuracy, has of late been applied to the purpose of determining longitude at sea. "After months spent in a passage from South America to Asia," says Arnott, "our captain's chronometer announced that a certain point of land was then bearing east from the ship at a distance of fifty miles; and in an hour afterwards, when a mist had cleared away, the looker-out on the mast gave the joyous call, 'land ahead!' verifying the report of the chronometer almost to a mile, after a voyage of thousands. It is natural at such a moment, with the dangers and uncertainties of ancient navigation before the mind, to exult in contemplating what man has now achieved. Had the rate of the wonderful little instrument in all that time changed even a little, its announce-

ment would have been worse than useless—but in the night, and in the day, in storm, and in calm, in heat, and in cold—while the persons around it were experiencing every vicissitude of mental and bodily condition, its steady beat went on, keeping exact account of the rolling of the earth, and of the stars; and in the midst of the trackless waves, it was always ready to tell its magic tale of the very spot of the globe over which it had arrived." In one point of view, this result appears to arise from the perfection of the chronometer's mechanism; but had not the man of science determined the exact figure of the earth, and its rate of motion around both its own axis and the sun, the chronometer could have given no information respecting longitude; it would have told its tale indeed, but without science as its interpreter, that tale would have remained wrapped in the mystery of an unknown tongue.

A. D. G.

DUTY OF MOTHERS.

BY MRS. SIGOURNEY.*

Mothers best discharge their duty to the community, by training up those who shall give it strength and beauty. Their unwearied labors should coincide with the aspirations of the Psalmist, that their "sons may be as plants grown up in their youth; their daughters, as corner-stones, polished after the similitude of a palace." They would not wish to leave to society, where they had themselves found protection and solace, a bequest that would dishonor their memory.

We, who are mothers, ought to feel peculiar solicitude with regard to the manner in which our daughters are reared. Being more constantly with us, and more entirely under our control than sons, they will be naturally considered as our representatives, the truest tests of our system, the strongest witnesses to a future generation, of our fidelity or neglect.

"Unless women," said the venerable Fellenberg, "are brought up with industrious and religious habits, it is in vain that we educate the men: for they are the ones who keep the character of men in its proper elevation."

* The rule which we usually observe, is to leave our readers to form their own judgments upon the labors of our contributors, without comment or commendation from ourselves. We shall be justified, however, in departing from this rule, in reference to this article from the pen of Mrs. Sigourney, if, by so doing, it shall arrest the attention of our readers generally. To say nothing of its characteristic graces of style, the subject of which it treats is of momentous importance to the happiness and well-being of the community; and, if it were possible, it should be placed in the hands of every mother capable of appreciating the beauty and originality of its thoughts and precepts. We own ourselves to have been highly delighted with it, as we usually are with every thing from the pen of this highly gifted lady. The genius, taste, and morality of our country are already much indebted to her, and her fame as an authoress is the public property of the nation. We do not know whether the works of Mrs. Sigourney have been as yet generally introduced into our southern female schools; if not, they certainly should be, whether they are regarded as chaste models of composition, or as repositories of all that is pure in sentiment and sublime in morals.—[Ed. So. Lit. Mess.

tion." Our duty to the community, which must be discharged by the education of a whole race, comprises many unobtrusive, almost invisible points, which in detail may seem trivial, or at least desultory, but which are still as important, as the rain-drop to the cistern, or the rill to the broad stream.

A long period allotted to study; a thorough implantation of domestic tastes, and a vigilant guardianship over simplicity of character, are essential to the daughters of a republic. That it is wise to give the greatest possible extent to the season of tutelage, for those who have much to learn, is a self-evident proposition. If they are to teach others, it is doubly important. And there is no country on earth, where so many females are employed in teaching, as in our own. Indeed, from the position that educated women here maintain, it might not be difficult to establish the point, that they are all teachers, all forming other beings upon the model of their own example, however unconscious of the fact. To abridge the education of the educator, is to stunt the culture of a plant, whose "leaves are for the healing of the nations."

I was delighted to hear a young lady say, at the age of nineteen, "I cannot bear to think yet of leaving school, I have scarcely begun to learn." With propriety might she express this sentiment, though she was eminent both in studies and accomplishments,—if the great Michael Angelo, could adopt for his motto, in his ninetieth year—"ancora imparo,"—and "yet I am learning."

It has unfortunately been too much the custom in our country, not only to shorten the period allotted to the education of our sex, but to fritter away even that brief period, in contradictory pursuits and pleasures. Parents have blindly lent their influence to this usage. To reform it, they must oppose the tide of fashion and of opinion. Let them instruct their daughters to resist the principle of conforming in any respect to the example of those around them, unless it is rational in itself, and correctly applicable to them as individuals. A proper expenditure for one, would be ruinous extravagance in another. So, if some indiscreet mothers, permit their young daughters to waste in elaborate dress and fashionable parties, the attention which should be devoted to study, need their example be quoted as a precedent? *To do as others do*, which is the rule of the unthinking, is often to copy bad taste and erring judgment. We use more discrimination in points of trifling import. We pause and compare patterns, ere we purchase a garment which, perchance, lasts but for a single season. Why should we adopt with little inquiry,—or on the strength of doubtful precedent,—a habit, which may stamp the character of our children forever?

When circumstances require, the youngest girl should be taught not to fear to differ from her companions, either in costume, manners, or opinion. Singularity for its own sake, and every approach to eccentricity, should be deprecated and discouraged. Even necessary variations from those around, must be managed with delicacy, so as not to wound feeling, or exasperate prejudice. But she who dares not to be independent, when reason or duty dictate, will be in danger of forfeiting decision of character, perhaps, integrity of principle.

Simple attire, and simple manners, are the natural ornaments of those who are obtaining their school edu-

cation. They have the beauty of fitness, and the policy of leaving the mind free, for its precious pursuits. Love of display, every step towards affectation, are destructive of the charms of that sweet season of life. Ceremonious visiting, where showy apparel, and late hours prevail, must be avoided. I feel painful sympathy for those mothers, who expose their young daughters to such excitements, yet expect them to return unimpaired and docile, to the restraints of school discipline. "Those who forsake useful studies," said an ancient philosopher, "for useless speculations, are like the Olympic gamesters, who abstained from necessary labors, that they might be fit for such as were not so."

Shall I allude to the want of expediency, in exhibiting very young ladies in mixed society? Their faces become familiar to the public eye. The shrinking delicacy of their privileged period of life escapes. The dews of the morning are too suddenly exhaled. They get to be accounted old, ere they are mature,—more is expected of them, than their unformed characters can yield,—and if their discretion does not surpass their years, they may encounter severe criticism, perhaps calumny. When they should be just emerging as a fresh opened blossom, they are hackneyed to the common gaze, as the last year's Souvenir, which by courtesy or sufferance, maintains a place on the centre-table, though its value has deteriorated. Is not the alternative either a premature marriage, or an obsolete continuance in the arena of fashion, with a somewhat mortifying adherence to the fortunes of new candidates, as, grade after grade, they assert their claims to fleeting admiration, or vapid flattery?

How much more faithfully does the mother perform her duty, who brings forth to society, no crude or superficial semblance of goodness, but the well-ripened fruit of thorough, prayerful culture. Her daughter, associated with herself, in domestic cares, at the same time that she gathered the wealth of intellectual knowledge, is now qualified to take an active part in the sphere which she embellishes. Adorned with that simplicity which attracts every eye, when combined with good breeding, and a right education, she is arrayed in a better panoply than the armor of Semiramis, or the wit and beauty of Cleopatra, for whom the Roman lost a world.

Simplicity of language, as well as of garb and manner, is a powerful ingredient in that art of pleasing, which the young and lovely of our sex are supposed to study. The conversation of children is rich in this charm. Books intended for their instruction or amusement, should consult their idiom. Ought not females to excel in the composition of elementary works for the juvenile intellect, associated as they are with it, in its earliest and least constrained developments? The talented and learned man is prone to find himself embarrassed by such a labor. The more profound his researches in science, and the knowledge of the world, the farther must he retrace his steps, to reach the level of infantine simplicity. Possibly, he might ascend among the stars, and feel at home; but to search for honey-dew in the bells of flowers, and among the moss-cups, needs the beak of the humming-bird, or the wing of the butterfly. He must recall, with painful effort, the far-off days, when he "thought as a child, spake as a child, understood as a child." Fortunate will he

be, if the "strong meat" on which he has so long fed, have not wholly indisposed him to relish the "milk of babes." If he is able to arrest the thoughts and feelings, which charmed him when life was new, he will still be obliged to transmute them into the dialect of childhood. He must write in a foreign idiom, where, not to be ungrammatical is praise, and not utterly to fail, is victory. Perhaps, in the attempt, he may be induced to exclaim, with the conscious majesty of Milton—"my mother bore me, a speaker of that, which God made my own, and not a translator."

It has been somewhere asserted, that he who would agreeably instruct children, must become the pupil of children. They are not, indeed, qualified to act as guides among the steep cliffs of knowledge which they have never traversed; but they are most skilful conductors to the green plats of turf, and the wild flowers that encircle its base. They best know where the violets and king-cups grow, which they have themselves gathered, and where the clear brook makes mirthful music in its pebbly bed.

Have you ever listened to a little girl telling a story to her younger brother or sister? What adaptation of subject, circumstance, and epithet? If she repeats what she has heard, how naturally does she simplify every train of thought. If she enters the region of invention, how wisely does she keep in view the taste and comprehension of her auditor. Ah, how powerful is that simplicity, which so readily unlocks and rules the heart, and which, "seeming to have nothing, possesseth all things."

Those who are conversant with little children, are not always disposed sufficiently to estimate them, or to allow them the high rank which they really hold in the scale of being. In regarding the acorn, we forget that it comprises within its tiny round the future oak. It is this want of prospective wisdom, which occasions ignorant persons often to despise childhood, and renders some portions of its early training seasons of bitter bondage. "*Knowledge is an impression of pleasure*," said Lord Bacon. They who impart it to the young, ought not to interfere with its original nature, or divide the toil from the reward. Educated females ought especially to keep bright the links between knowledge and happiness. This is one mode of evincing gratitude to the age in which they live, for the generosity with which it has renounced those prejudices, which in past times circumscribed the intellectual culture of their sex.

May I be excused for repeatedly urging them to convince the community that it has lost nothing by this liberality? Let not the other sex be authorised in complaining that the firesides of their fathers were better regulated than their own. Give them no chance to throw odium upon knowledge, from the faults of its allies and disciples. Rather let them see, that by a participation in the blessings of education, you are made better in every domestic department, in every relative duty—more ardent in every hallowed effort of benevolence and piety.

I cannot believe that the distaste for household industry, which some young ladies evince, is the necessary effect of a mere expanded system of education. Is it not rather the abuse of that system? or may it not radically be the fault of the mother, in neglecting to mingle day by day, domestic knowledge with intellec-

tual culture? in forgetting that the warp needs a woof, ere the rich tapestry can be perfect? I am not prepared to assert that our daughters have too much learning, though I may be compelled to concede, that it is not always well balanced, or judiciously used.

Education is not indeed confined to any one point of our existence, yet it assumes peculiar importance at that period when the mind is most ductile to every impression. Just at the dawn of that time, we see the mother watching for the first faint tinge of intellect, "more than they who watch for the morning." At her feet a whole generation sit as pupils. Let her learn her own value, as the first educator; that in proportion to the measure of her influence, she may acquit herself of her immense responsibilities.

Her debt to the community must be paid through her children, or through others whom she may rear up, to dignify and adorn it. Aristotle said, "the fate of empires depended on education." But that in woman, dwelt any particle of that conservative power, escaped the scrutinizing eye of the philosopher of Greece. The far-sighted statesmen of our times have discovered it. A Prussian legislator, at the beginning of the present century, promulgated the principle, that "to the safety and regeneration of a people, a correct state of religious opinion and practice was essential, which could only be effected by proper attention to the early nurture of the mind." He foresaw the influence, which the training of infancy would have, upon the welfare of a nation.

Let our country go still further, and recognize in the nursery, and at the fireside, that hallowed agency, which, more than the pomp of armies, shall guard her welfare, and preserve her liberty. Trying as she is, in her own isolated sphere, the mighty experiment, whether a republic can ever be permanent—standing in need as she does, of all the checks which she can command, to curb faction, cupidity and reckless competition—rich in resources, and therefore in danger from her own power—in danger from the very excess of her own happiness, from that knowledge which is the birth-right of her people, unless there go forth with it a moral purity, guarding the unsheathed weapon—let this our dear country, not slight the humblest instrument that may advance her safety, nor forget that the mother, kneeling by the cradle-bed, hath her hand upon the ark of a nation.

Hartford, Conn. October 18th, 1838.

GREECE.—A SONNET.

Land of the muses, and of mighty men!
A shadowy grandeur mantles thee; serene
As morning skies, thy pictur'd realms are seen,
When ether's canopy is clear, and when
The very zephyrs pause upon the wing
In ecstasy, and wist not where to stray.
Beautiful Greece! more glorious in decay
Than other regions in the flush of spring:
Thy palaces are tenantless; the Turk
Hath quenched the embers of the holy fane;
Thy temples now are crumbling to the plain,
For time hath sapped, and man hath helped the work.
All cannot perish—thy immortal mind
Remains a halo circling round mankind. [Blackwood.

FALKLAND, BY E. L. BULWER.*

This is a volume which has been for a considerable time *sur le tapis*; and, from the reputation of the author and the subject of which he treats, has doubtless long since found its way to the *boudoir* of every lady, married or single, who is fond of fashionable life, and *ergo* of fashionable novel reading; for I take it for granted, that a truly fashionable lady has little time to devote to aught else than those works of folly and foolery which are daily and hourly poured forth from the press, in the form, and under the name of novels. We would not, however, be understood as aiming to rank the volume now before us among the publications of the denomination just mentioned. Far from it; we regard it as meriting a much more serious attention. We regard it as possessing far more than ordinary ability in the author, in his development of character and his portraiture of the passions. Yet, while we promptly award to it that meed of praise, which, as a literary effort, it most unquestionably merits, we are far from according to it our applause for the moral tendency, which the author, in his ingenious preface, would fain flatter his readers, he has been enabled to infuse into its pages. We think, on the contrary, that it contains sentiments supported by a reasoning and eloquence worthy of a better cause, and which, if suffered to pass unexposed and uncondemned, are calculated to sap the very foundations of those wise and salutary institutions, upon which virtuous society, and indeed every thing relating to the moral government of mankind, must ultimately and inevitably depend. To expose the deleterious tendency of those sentiments, and to pass upon them a loudly-called-for condemnation, is the purpose for which we have again, for a few moments resumed our grey goose quill,

"That mighty instrument of little men."

We are introduced to the hero of the tale by a series of letters from him to his friend Monkton; from which we learn that he is somewhat of a *solitaire*, shrouded in the pall of melancholy, and, in the genuine spirit of a misanthropist, ruminating with gloomy but bitter sarcasms on the unsatisfying pleasures of a gay *bel monde*, in the golden light of whose flattery and applause he had long moved with glory and renown. He treats with a proud contempt (and verily we think justly too,) the mercenary motives which dictate the conduct and call forth the *friendship* of the generality of mankind. "From the height of his philosophy he compassionates" the imbecility of human greatness, and pours the phials of his indignation upon the

*These remarks upon Bulwer's "Falkland," were written several years since. They are now offered for publication from a belief in the mind of the writer, that an undue applause has been awarded to the imaginary productions of the distinguished novelist.

ductility of the fawning sycophants of power. "He smiles at the kindness of the fathers, who, hearing that he was talented, and knowing that he was rich, looked to his support in whatever political side they had espoused. He saw in the notes of the mothers their anxiety for the establishment of their daughters, and their respect for his acres." In short, the once gay, versatile and still elegant and accomplished Mr. Falkland, (and, ah! over whose elegance and accomplishments how many married and unmarried female bosoms have not heaved the sigh of a would-be *seduist*;) appears depicted to our imagination in the solemn bearing of a moralist, and the dignified garb of a philosopher. He presents to our view that most enviable picture which few painters have been enabled vividly to portray, from the extreme paucity of the numbers of the originals they are called upon to copy—that of a man thoroughly disgusted with his kind, and enjoying perfect contentment in the becalming gloom of a romantic solitude. From a view of the brilliant career he has passed, we are naturally led to inquire, if, in all the gay and mercenary world, not one solitary being had for a moment arrested his triumphant course, and claimed of his heart the homage of a sigh. To this inquiry, we receive for answer, "that when he left Dr. ——'s, he was sent to a private tutor in D——e. Here he continued for about two years. It was during that time that—but what *then* befell him is for no living ear! The characters of that history are engraven upon his heart in letters of fire; but it is a language that none but himself have the authority to read. It is enough for the events of that period, that they were connected with the first awakening of the most powerful of human passions, and that whatever their commencement, their end was despair! and *she*—the only object of that *love*—the only being in the world who ever possessed the secret and the spell of his nature—her life was the bitterness and the fever of a troubled heart—her rest is the grave." Here we find that he has been in *love*; but that the unhappy object of his passion, from some cause not revealed, had sunk to an early tomb. We are also reminded that that passion was connected with many sins and misfortunes in after life. This we regard as a modest allusion to the career of the *roué*, which he so long and so triumphantly led, and which has invested his character with such an absorbing and thrilling interest in the estimation of a majority of the female readers—God forbid we should say *all*—who have so often, and in such tremulous anxiety and tenderness, followed through the pages of this little volume, the incidents of his eventful life. That he had been highly educated, and was born of an ancient and honorable family—that he had led a successful career in fashionable life—that he loved one sacred object, which, although dead, was still

unforgotten—that he had "become a weary of the world," and had withdrawn forever from the glare of its splendor, and the enticements of its follies, all contributed to throw around him in his state, of what Rousseau would call *loisir philosophique*—an air of romance, that called forth our exalted admiration, while it elicited our warmest sympathy. But, alas! "*paulo majora canamus*." The scene must now change.

He has a favorite retreat in the neighboring grounds of a Mr. Mandeville, who is a member of parliament, and married to the daughter of the Duke of Lindvale, who is very young, very beautiful, very accomplished, and the mother of an interesting child. This immaculate being—who is represented "as pure as an enthusiast's dream of heaven, yet bearing within the latent and powerful passion, and tenderness of earth; and mixing with all a *simplicity* and *innocence*, which the extreme earliness of her marriage, and the ascetic temper of her husband, had tended less to diminish than increase"—has left for a season the gaieties of London, and retired for the benefit of her health, naturally delicate, to the country mansion of her husband at E——. She has heard of Mr. Falkland from Lady Margaret and Mrs. Dalton. By the one, she is told that when he wishes to please, he is perfectly irresistible; and by the other, that he is conceited, satirical, and, in short, very *disagreeable*. Yet is she very anxious to see him. Her husband is absent, devoting his time to his duties in parliament. Her little boy is her constant companion, and upon him she seems to lavish all the love and affection which pours fresh and unobstructed from the perennial fountain of her heart. With him, on a certain day, she takes a ramble to revisit her former and favorite haunts. In the course of her rambles, she discovers a man apparently asleep, with a volume of Shakespeare by his side. The boy, as other little boys would do, picks up the book. The mother, all anxiety, takes the volume to replace it immediately, but still takes time to peruse a passage upon which the child had accidentally opened; and often in after days recalled that passage as an omen. It was from *Midsummer Night's Dream*, and ran as follows:

"Ah, me! for aught that ever I could read,
Could ever hear by tale or history—
The course of true love never did run smooth!"

"She laid the book down, and caught a glimpse of the countenance of the sleeper: never did she forget the expression which it wore—stern, proud, mournful, even in repose! She hurried home, and all that day she was silent and abstracted: the face haunted her like a dream. Strange as it may seem, she spoke neither to Lady Margaret nor to Mrs. Dalton of her adventure. And why?" emphatically asks our author. "Is there in our

hearts any prescience of their misfortunes?" Now who, with the foregoing description before him, can deny that the pure and lovely being—whom he must now regard as the intended offering at the altar of the guiltiest of passions—is *already seduced*? Yea, even before the sound of the voice of the seducer has fallen upon her ears, she has prepared her heart to yield to its solicitations. The damning propensity to commit that forbidden and most unhallowed deed, which it is possible for human depravity to conceive, is already alive in that bosom, which but a moment before was all purity, and glowing with all the consecrated ardor of maternal devotion. We profess to be totally strangers to the credulity which has duped the majority of mankind. We may be in error; but when we boldly and confidently assert, that there is no such thing as *seduction in married life*, we ask, we seek no more cogent authority to sustain our assertion than the volume now before us. We have little of credence to yield to those fervid descants so often sung about the violence of passions, and the weakness and helplessness of woman. That a majority of them are weak, and helpless too, and that they possess a violence and impetuosity of passion and feeling, equal in every respect to those of men, few, I believe, who know much of the general features of their characters, will consider at all problematical. But, that the possession of these ignoble traits of character, should, despite the proper and resolute exercise of the redeeming and counteracting qualities, which the God of nature has implanted in our breasts for virtuous purposes, so far conquer the ennobling principles of the heart and soul, as to suffer them to succumb to the promptings of depravity and crime, is a position in ethical philosophy, from which I, for one, must beg leave most unequivocally to dissent. And let those of the "fair creation," who may be even now listening to the syren voice of seduction, cease now and forever "to lay the flattering unction to their souls," that because of their weakness they may sin with impunity against the thundering injunctions of the divine law, or the still small voice of their guardian angel, forever invoking a devotional adherence to the heavenly admonitions of virtue. Let me ask them, too, if, even in those moments, when they feel themselves least able to cope with the arts of the seducer, they are not more the victims of the degrading and debasing feelings, which *they themselves* have rather nurtured, than attempted to conquer and discard, than the arguments and solicitations of the lurer to their ruin.

To return to the heroine. After her adventure in her walk, Mr. Falkland, at the suggestion of Lady Margaret, is invited to E—— to dinner. Here the future lovers meet to speak for the first time. There was of course a mutual admiration, and both had promptly resolved to reciprocate the

tender emotions which it was evident each felt for the other. "Falkland did not stay long after dinner," says the narrative, "but to Lady Margaret he promised all that she required of future length and frequency in his visits. When he left the room, Lady Emily went instinctively to the window to watch him depart; and all that night his low, soft voice, rung in her ear like the music of an indistinct and half-remembered dream." Very delightful musings, indeed, to occupy the mind of a wife reposing on the couch of her absent husband, and that too within hearing of the soft breathings of her innocent child! Surely a more revolting picture of baseness and depravity can hardly be presented to the imagination than is here exhibited. All our thoughts of virtue, delicacy, and the sanctity of the matrimonial bond, recoil in horror from this voluntary and miserable prostitution of all that is most sacred in the several relations of life—all that is softening and elevating in character—all that is refined and separated from the dross—the alloy of human existence—to the gratification of worst than bestial sensuality and lechery. And all this degradation too, is made to spring from one, who a moment before, is depicted by our author "as having much that is termed *genius*—its warmth of emotion—its vividness of conception—its admiration for the grand—its affection for the good—and a dangerous contempt for what is mean and worthless, the very indulgence of which is an offence against the habits of the world. Her tastes were, however, too *feminine and chaste* ever to render her eccentric." Verily, Mr. Bulwer, the ingenuity of your pen has failed in *this* instance, at least, in giving that consistency to the attributes of your heroine, which renders at all *necessary*, those arts, the possession of which, in all time, has so much distinguished that elegant personage (so often worshipped and sighed for by those delicate emanations from the glory of heaven, "the lady's fair,") commonly called the *roue*! Your shades of character are made to change with the shiftings of every scene in the drama. To-day, she is little less than an angel—to-morrow, she is robed in the enticing garb of the would-be-adulteress, panting for the embraces of a paramour, ere he has aspired to become one.

We will not accompany the devoted couple through the various scenes of the conflicts of passion they are called upon to encounter, before the perpetration of the deed, at the bare recital of which, the sensibilities of the father and husband are tremblingly aroused to the appalling consciousness of the frail and miserable tenure by which matrimonial bliss is enjoyed in the fashionable and heartless world. The author has taxed to the uttermost his fruitful, fervid, and eloquent imagination, to elicit for the guilty pair the sympathies of the reader. We, at least, must assure him of

our total repugnance to award them ours. Indeed we feel, throughout his glowing descriptions of what he would have us regard as the *struggles* they underwent, ere the sacred ties of mother and wife could be severed, such an *inconsistency* with the estimate we had formed of the character of Lady Emily, before she is presented to Falkland, as in our opinion, renders totally unnecessary such high-wrought pictures of distress and suffering. We cannot feel that such suffering ever could exist in the bosom of one, who, like the fair and accomplished adulteress, seems to have *intended* the commission of the act. We would almost vouch to the author, that in an action of criminal conversation, with no more cogent evidence than he himself has furnished, to make out to the satisfaction of an honest jury a clear and incontrovertible case of *malice prepense*.

We have gone through this volume, we confess, with no little interest. We have hung with lively anxiety over many of the scenes, which all will admit, are portrayed by the hand of a master. But we have looked in vain for one prominent redeeming principle to save the work, as a whole, from that sentence of condemnation which we do not hesitate to pass upon it in the most unqualified terms. As a tale of seduction, it contains no lesson from which the young and unpractised heart can take such warning as to prompt it to avoid the rock upon which many a frail bark, freighted with domestic hope and happiness, has been unhappily wrecked. It purports, indeed, to contain the punishment which the crime deserves. But the moral, which that punishment would otherwise afford, is entirely destroyed by the eloquent and pathetic appeals so often made to the sympathies of the reader. The death and burial of the adulteress, (we cannot call her the *heroine*,) which are described in the richest and most touching style, will, we venture to assert, elicit from the fair perusers of this tale, in one hundred instances to one opposing, the tears of *compassion* for the guilty being who has outraged all decency, and wilfully violated the most sacred pledges of moral responsibility. The horror and indignation which such crimes should excite in the bosom of exalted virtue, is here aimed to be supplanted by emotions of pity and sorrow for the perpetrators of a deed, which, more than all others, is calculated to undermine the foundations of the beautiful temple in which that virtue is enshrined. The author, however, may console himself with the reflection, that it is not the first instance in the annals of crime, wherein the prerogative of eloquence has been exercised, to gain for the criminal those tears of sympathy which are due only to the martyr.

A few general remarks, and we take leave of Falkland. The writer, by the foregoing strictures, expects not to deter his female readers from a perusal—nay, frequent perusals of the volume

before him. He professes a too intimate knowledge of the female heart and of female curiosity, to presume for a moment, that his reasoning, however cogent, can have any other effect than to enkindle an increased desire to become acquainted with its contents. His sole and engrossing object has been to warn them with the solemn voice of a sybil, against those sophisms of the author, which a gorgeous imagination has gilded with the heavenly radiance of truth. He has sought to hang a veil over the luminary of vice, whose rays are darting a baneful influence upon the dazzled vision of incautious virtue, in order that that virtue itself may behold and contemplate unawed the dark spots that appear on its disk when it is shorn of its beams.

To you who have found out that you have assumed rather too hastily the sacred and solemn responsibilities of the wife and the mother, and now pine in languid listlessness for the embraces of the elegant and accomplished *roué*, and ever court those embraces, with all the arts and smiles with which guilty ingenuity has arrayed you, I have now only to say, *come*, and from this volume derive all the consolation you may need amid the awful thunderings of the Sinai of conscience. Here you will find a justification for the crime you may be burning to commit, and be cheered by the soul-inspiring thought, that, though your premature deaths may be clouded with a shade of melancholy, yet the sacrifice will be made on the altar of *LOVE*! and your graves will be bedewed with the tears of sympathetic sorrow.

To the victorious *roué*, whose brilliant career has been marked by a thousand conquests, the burning wheels of whose triumphal car have long heedlessly swept over the ruins of domestic peace and happiness, and the desolated hopes of silently imploring innocence—who is even now arming again for the conflict, and the terror of whose name is an unerring harbinger of additional glory—to him, I say, pause not in your radiant course. Your crimes have found an eloquent defender in the matchless pen of the author of Falkland, and with him you may indulge in the magnificent contemplation, that though your lives may be blackened with infamy, that infamy itself will be eclipsed by the effulgence of fame; and the gloom of the final close of your glorious career, will be cheered by the consolations of an infidel philosophy, more enticing far than the enraptured visions of Chaldean astrologers, and before whose enchanting splendor, the little stars that glitter in the firmament of the lowly follower of Jesus, will shrink away and hide their dimished heads. It will prove to you the only *GOLDEN BRANCH*, whose magic power will guide you triumphantly through the shades of gloomy torment and despair, to the regions of elysian peace and repose.

OSCAR.

CINCINNATI ADDRESS,

By Henry Ruffner, President of Washington College; delivered in the chapel of the College on commencement day, June 26th, 1836—published by "request of the Students and auditory."

FELLOW CITIZENS: It is known to you all, I presume, that the Cincinnati Society of Virginia long since resolved to bestow their funds on this college, for the establishment of a school in which certain branches of military science should be taught. If any one should inquire for the motive of this donation, he needs only to be told that the military associates of Washington would readily follow his example, and locate their patronage and their name where the illustrious President of their society had located his; so that the same literary institution might serve as a monument of all the revolutionary patriots of Virginia, who had "fought and bled in freedom's cause."

They annexed to their donation the request, that in due time an oration should be delivered here, for the purpose of explaining the character and views of their association, and of vindicating their memory from certain charges that were made against them shortly after the institution of their society. Thus when they conferred upon the college an honor and a benefit, which entitle them to our everlasting gratitude, they asked in return that we should stand up in defence of their reputation, when they who had so valiantly defended their country, should have laid their venerable heads in the dust, and have left nothing but their glorious names for calumny to fix her envious tooth upon. Most cheerfully do the authorities of the college undertake the office with which the society has honored them—and that not for once only; but, if our successors follow our example, (as I trust they will,) to all generations. One declared object of the Cincinnati Society, was "to preserve the memory of the American Revolution," and "to maintain the rights of man," for which they had toiled and suffered so much. With this view they desired to make their society, a permanent one by transmitting it to their posterity. Having been compelled by popular clamor to give up this part of their plan, they have left it to our college to fulfil, in some degree, their patriotic intention. They are nearly all gone; and soon the last of our revolutionary heroes will have vanished from the scene of their achievements; but the College of Washington and the Cincinnati will remain charged with the noble duty of preserving, in their name, the memory of the American Revolution, and of promoting the inestimable rights of man, which this flourishing republic enjoys through their instrumentality.

It is therefore our purpose to make "The Cincinnati Oration" one of the standing exercises at the college commencements, and the delivery of it one of the honorary distinctions of our best scholars. The orator will not deem it necessary, on every occasion, to detail the history of the society in whose honor he shall speak; but he will be instructed to choose some patriotic theme, adapted to inspire the youth of our country with the love of civil liberty, and to draw his illustrations from the American Revolution, and from the examples of the departed members of the Cincinnati Society, who bought the liberty of these United States, at the expense of seven years' toil and bloodshed.

The time has at length arrived, when the Cincinnati fund is in a state to become, in part, available to the college. We are, therefore, now called upon to fulfil all that is practicable of the conditions upon which the donation was made.

The faculty thought it expedient that the first address, on a subject so new and important, should be delivered by some gentleman of experience in such exercises, and whose attention had heretofore been turned to the history of the society, and the circumstances and design of their valuable donation to the college. When we failed to procure the services of a distinguished alumnus of the institution,* who is now a member of the corporation, I was induced by the solicitation of my colleagues to undertake a duty, in itself, quite agreeable to my feelings, but perhaps better done, had it been done by another.

I shall not attempt to exhaust the noble theme. The present address is designed to be merely an introduction to the future series of Cincinnati orations. A brief historical statement, respecting the origin and constitution of the society, with some vindictory comments on the charges formerly made against them, will suffice for the present occasion.

At the close of the revolutionary war, when the army was to be disbanded, the officers found their approaching separation more bitter, than had been even the toils and dangers of their long warfare. Their sorrow at the idea of parting was natural. During seven long years, they had been joined together in the service of their country, contending with united zeal and patriotism for the rights of man. Devoted to a cause so sacred, for which they daily risked their lives, with one wish, one hope, one determination of soul in the enterprise, all their motives, and all their sympathies, would operate towards a warm and brotherly affection for one another. Many circumstances tended to strengthen their mutual attachment. Long separated from old friends and relations in the walks of civil life, they associated almost exclusively together. They were together during the weary march; they stood side by side amidst the uproar and the havoc of battle—all struck at the same foe—the triumph of success, and the mortification of defeat came alike to all. When rest and refreshment checkered the scene of their warfare, they were still boon companions at the festive board, and on the couch of repose. This customary familiarity and intimate companionship, for so long a time, and under such circumstances, would grow into a habitual and confirmed attachment, and even into the warm feeling of inseparable brotherhood.

Thus it is, that every army long engaged in the same service and the same field, becomes united by discipline, and by sympathy, into a compact and almost indivisible body, animated by one spirit, and moving by one impulse. The army of the revolution had, in the cause for which they contended, the protracted sufferings which they endured, and the glorious success which finally crowned their efforts, a peculiar bond of union. They fought not for conquest, nor even for glory, but for the salvation of their country. They had, in the fullest sense, "staked their lives, their fortunes, and their sacred honor" upon the issue. When at last, by

* James McDowell, esquire, who had prior engagements that prevented him from undertaking it.

their joint exertions, they had won the prize of peace and independence for thirteen states; the sublime joy that swelled their bosoms, at a result so happily and so gloriously achieved, made them feel more united than ever. Together they had struggled in the by-gone days of adversity and gloom—together they had at length wrung the plume of victory from a mighty foe; and now together would their names be indelibly inscribed upon the roll of their country's benefactors, and at the head of the list, not only in time but in merit: for what could any future patriot do, more than preserve unimpaired the blessings of freedom, which their scarred breasts and toil-worn hands had won? Such thoughts coming on at the conclusion of peace, and kindling into a brighter glow a friendship already warmed by a seven years' fraternity in war, how naturally would the sad idea of their approaching separation, cast its dark shade over their patriotic joy!

But their country could no longer retain them in her service. They must needs part, and go each to his several abode, probably never more to partake in the companionship of the tented field, the excitement of the sounding march, and the tug of the thundering battle; they must retire to the almost forgotten scenes of peaceful obscurity, where the noise of glorious warfare might never reach them more, and they might never again even see one another's loved and long-familiar faces. How naturally, then, did they cast about for some means of alleviating the sorrows of separation, and of renewing, occasionally, the communion and fellowship, so delightful and so dear to their hearts! When General Knox proposed that they should form themselves into a society, as the best means of maintaining the feelings and the intercourse of friendship, all embraced the proposal; for it struck them as appropriate and unobjectionable, and as furnishing the simplest way and the surest guarantee, that they would, once in a while, have the pleasure of communing together and mingling reminiscences of the days, when they wrought their perilous way through stormy scenes of the revolution.

But the emotions which stirred within them demanded something more than the maintenance of their personal friendship. They felt that they and their compatriots had just achieved the most important political work of modern times. They had successfully vindicated the rights of man. They had established a system of free republican government over half a continent. They believed, and they had reason to believe, that they had founded a new era in the political history of mankind; and had set an example of resistance to oppression and of the exercise of popular government, which would sound through ages, and through nations, and would be felt by all the thrones, dominions, and principalities of the world. But to make this example effective in the promotion of human rights, it was necessary that the principles of the American Revolution should be sacredly maintained in the United States: and, that the experiment of free government, now to be made, should be carried to a successful issue.

With these views, they introduced some provisions into the constitution of their society, which would, they believed, make it stand as a perpetual memorial and bulwark of the principles for which they had fought and bled. They solemnly declared that their society

was instituted with the design of perpetuating their own friendship—of preserving the memory of the American Revolution—and of promoting those rights of man for which they had contended. To make their institution more effectual for these noble ends, they determined to make it perpetual, by transmitting it to their posterity; each member to be succeeded by his oldest son; or in failure of male offspring by any of his collateral kindred who might be deemed worthy. They might well presume that their descendants would imbibe their own principles, and long retain the spirit of the American Revolution; and the more especially, when they should inherit membership in an association, founded by their patriotic sires, for the express purpose of keeping fresh and vigorous the spirit and the principles of political freedom.

They provided also in their constitution for the admission of honorary members, whose personal merit and political principles might make them worthy associates in the cause of freedom and of patriotism. But lest this provision might change the original character of the society, by introducing large numbers who had no connexion with the officers of the revolutionary army, they limited the number of honorary members to one-fourth of their original number, and elected them for life without inheritance in their descendants.

As their first object was a fraternal association among themselves, they made it a condition that each officer should contribute a month's pay to constitute a fund for contingent expenses, and especially for the relief of any of their members who might fall into distress. The fund so raised, is that which, after it answered its original purpose, was bestowed upon our college.

Finally, in the selection of a name, they thought of a resemblance between their case and that of the ancient Roman patriot, Cincinnatus, who was called from the plough to deliver his country in a dangerous crisis; and who, after accomplishing the deliverance, threw off his military habiliments, and returned to the plough again. Therefore they called themselves the Society of Cincinnati.

No sooner was the society organized, and its constitution published, than it began to be regarded with jealousy, if not with envy, by some who professed to consider it as aristocratical in its tendency, if not in its design. A Mr. Burke of Charleston published a pamphlet to rouse the fears of his countrymen, and in a short time no little dissatisfaction and clamor were excited against the society from one end of the country to the other. That upon which the objectors laid the chief stress, was the hereditary membership; which was thought to be dangerous to political equality among our citizens, and to squint ominously at the introduction of an order of nobility. The provision to admit a small proportion of honorary members, added to the perpetuation of the society by hereditary succession, was thought to make the institution the more dangerous, inasmuch as it might draw into its connexion the most influential men of the country, and thus acquire by election a weight of talents and influence, which it might fail to maintain by the operation of the hereditary principle.

So great and so general became the popular dissatisfaction, that General Washington, president of the society, recommended that they should relinquish those

provisions of their constitution, which were most offensive to their countrymen; not because he thought them dangerous or objectionable in themselves, but because they excited so much dissatisfaction, and by making the society an object of popular jealousy, tended to frustrate the patriotic design of the founders. The provisions for hereditary succession and for the admission of honorary members, were therefore repealed, and the society was reduced to its first simple design of a friendly association for life among the officers of the revolutionary army.

Now when the society is extinguished by the decease of nearly all the venerable patriots who founded it, and it can no more excite the sensitive spirit of democratical jealousy; it is scarcely necessary to frame an elaborate vindication of the pure intentions of the founders and the harmless nature of the institution, even on the enlarged system of its original organization.

Can any one now suspect, that the officers of that army who "loved not their lives to the death" for liberty, would tarnish their laurels and belie all their acts of daring and of suffering, by a deliberate scheme to subvert the republican freedom, for which they had risked the loss of all things? If ever men gave invincible evidence of devotion to free institutions, it was the scarred and weather-beaten heroes of the revolution—the Washingtons, the Greeses, the Waynes, and the Morgans of the revolution.

I apprehend, however, that no one was so blinded by a malignant prejudice, as to suspect that the Cincinnati in general harbored any anti-republican design, or were themselves aware of any aristocratical tendency in their institution. The worst that was charged by any respectable accuser, was probably this; that a few politic individuals among them, having no faith in democratical government, embraced the scheme of the Cincinnati Society as a feasible method of introducing a distinction of ranks into the country, and of preparing the way for monarchical government, and that the society, as originally formed, was well adapted to this purpose.

Here we join issue, and maintain that the Cincinnati Society, even with its hereditary succession, was not qualified to produce any aristocratical distinction among the people of the United States.

Aristocracy, to be any thing more than an empty name, must be endowed with some transcendent powers and exclusive privileges. Its titles of distinction must be sustained, either by hereditary and unalienable wealth, or permanent military command, or legislative power; or by all of these combined. The aristocracy of England is sustained by its vast endowment of landed property, and its co-ordinate power in the legislature. Were it deprived of either of these props, it would fall into contempt, and be stripped even of its vain titles by the growing spirit of English democracy. So, in every country where the nobility maintain a substantial superiority over the commons, it is, and it must be, by virtue of their hereditary possessions, and by their pre-eminent share of military commands and civil dignities. By means of these, they first established themselves; and by the same means, they must support their claim to the homage, or even to the respect, of the commonalty—especially in these times, when

education and the press are stripping antiquated institutions of the gilded cloud, which so long dazzled the eyes of an ignorant multitude.

But what could have raised the Cincinnati above the common degree of American citizens? Not wealth; for, generally, they had inherited little from their ancestors; universally, they accumulated nothing in the form of pay and plunder in the public service; and poor and long-delayed was the reward which their country gave them for all their deeds and sufferings in her cause. Had they by any means acquired extraordinary wealth, they could not have transmitted it by entail to the heirs of their membership in the society. Law, usage, and public sentiment in this country, are alike opposed to the practice of entail, by which large estates descend undivided through a single line of posterity. On the contrary, the largest fortunes in this country are dissipated by division, and generally before they reach the third generation.

Nor could the members of the Cincinnati Society have acquired any exclusive privilege or official dignity, except by the free gift of their fellow-citizens. They had no wealth to buy political power, nor armies at command to wrest it from an unwilling people. Their military authority was laid aside, after having been exercised only for their country's liberty; they retained only the common station of citizens, and must like others win their way to office by popular suffrage. In the competition for votes, they could not be supposed to have any advantage over their fellow citizens, except from two sources: namely, the fame and merits of those who founded the society, and the combined support of the members themselves. But neither of these could avail much. The veteran officer who had fought for his country, would have a claim to popular favor, which many would acknowledge; but this claim would be weakened in the son, and dissipated in the grandson. This has been proved by experience. What advantage in political contests, have the sons and grandsons of the Cincinnati gained from the merit of their ancestors? How few of them have risen to eminent stations? Where are the kindred of Putnam, of Schuyler, of Greene, of Marion, or even of Washington? Their names are scarcely seen in the official lists of the age. A new generation has sprung up; and though the memory of our revolutionary patriots is embalmed in history, their families have generally fallen into obscurity. While the Cincinnati lived and kept their society in full operation, no political effect was produced by the association. Were their intended successors yet to meet and wear the social badge, their voices would still be unheard amidst the din of party politics; unless their social organization gave them a weight, which their relation to dead patriots has evidently failed to bestow.

Whilst we fully acknowledge that union is strength, and that a social organization is adapted to promote union; we may well deny that the Cincinnati could have acquired, by this means, any political ascendancy. Composing with their near connexions, not a hundredth part of the voters, they could have derived very inconsiderable weight from their numbers, even if they had acted in perfect union and concert. But perfect concert among themselves was not to be expected. Living, dispersed among their fellow citizens, and meeting in

society but once a year, their members would be more subjected to the opposing influences which create parties, than to the consolidating tendency of their social organization. If this was true of the original Cincinnati, the veteran brotherhood of the revolution; how much more would their successors, bound together by far weaker ties, have been rent by the contending elements of federalism and democracy? But had they been able to resist the intrusion of party spirit among themselves, they could not have prevailed against the resistance which their very union would have excited. You have heard how easily a few political pamphleteers of inferior degree, filled the public mind with suspicion and prejudices against their association; and that too, immediately after they had retired from the field of their glory, and almost before they had time to heal their wounds and to wipe the dust and the sweat of the revolution from their brows. How much more easily could popular leaders have heaped odium upon them in after times? To accomplish their supposed aristocratical designs, they must, in the division of parties, have embraced federalism, or high government principles; and then how utterly and irrecoverably must they have been overwhelmed by the surges of democracy, which swept down and dissolved the whole federal party! If they were compelled at the outset, when they had every advantage, to pacify the public mind by giving up some parts of their constitution; must they not have yielded all, if they had, as a body, engaged in political contests, when the wind and the waves of universal suffrage beat against their feeble tenement? of a universal suffrage swollen to turbulence, by the pauperism and mobocracy of Europe, disgorged upon our shores?

I hold, therefore, that the fancied scheme of the Cincinnati to make noblemen of themselves and their descendants was too unfeasible to be entertained by wise men, such as Alexander Hamilton and General Knox; and that if it were admissible that such a scheme was conceived in the organization of the society, the result has proved how little ground there was for the popular apprehension. No, fellow-citizens; aristocracy, if it ever invade our system of political equality, will not come in that way; but through the anarchy of a lawless and violent democracy, disunion and civil war among the states, and their inevitable consequence, a resort to military despotism, as the only remaining refuge for a harassed and ruined people.

Something may be conceded, however, without casting the slightest shade upon the fair fame of our revolutionary patriots. We may admit that at the close of the war, not a few of the wisest and best men, both civil and military, had painful misgivings about the issue of the great political experiment which was then to be tried in this country.

When they considered the vast extent of our territory, in which a diversity of local interests and prejudices would grow up; and the imperfect union of the states under the old confederacy; a union so loose and fragile as to be easily rent asunder; with a federal government dependant on the co-operation of all the state governments, and incapable of commanding respect either at home or abroad—they could not have full confidence in the success of the experiment. They had seen and felt the remissness of the states in fulfilling

their federal duties, under all the exigencies of the war for independence; how then would the same states fulfil them, when the pressure was removed, and the indolence and the selfishness of peace should have no counterpoise? There was evident danger, too, that the newly acquired liberty would degenerate into licentiousness; and that dissensions and collisions, among such ill-compacted states, would lead to intestine bloodshed and mutual desolation. Then their dearly bought independence would prove a curse instead of a blessing, for want of a controlling power.

These apprehensions were in part realised; and for several years a fearful progress was made towards the consummation of all that patriotism dreaded: when, after great difficulty and by the special mercy of heaven, the present federal constitution was adopted, and the country was saved at the very crisis of its fate.

If then some of the leading men of the revolution doubted whether fourteen democracies, spread over half a continent, and containing in themselves the elements of discord, could maintain good government within their respective limits, and move harmoniously together, these doubts were not unreasonable—and if they desired a strong concentrated government, to give their country peace at home and respect abroad, the desire argues nothing against their wisdom or their patriotism: for such a government, to some extent, was forced upon the states by a few years experience of the utter impotency and worthlessness of the mere league and covenant which they had first adopted. I wish, most devoutly, that even the present federal constitution may be able to carry us safely through the shock of the tempest, that is even now giving indications of its approach. The frequent out-breakings of lawless violence—the sympathy felt for all manner of land-pirates and adventurers who call themselves patriots—above all the fanatical spirit of abolition in the north, and the fiery threats of civil hostility and separation in the south—are fearful omens of a trial at hand; which if not met by the sound part of our citizens with wisdom and firmness, will yet extinguish all our patriotic hopes in sectional feuds and mutual destruction. We should then feel how much better it was to submit to a government, able to control the elements of discord, than to suffer the terrors of mobocratical violence, the horrors of civil war, and the furies of fanatical rage let loose.

We may admit also that the founders of the Cincinnati Society, in making provision for hereditary membership, desired to leave behind them an institution, which should stand as a living monument of their names and their public services.

“For who, to dumb forgetfulness a prey,
This pleased and anxious being e’er resigned;
And left the precincts of the cheerful clay,
Nor cast one longing lingering look behind.”

Would they not naturally, and might they not innocently, seek to preserve their posthumous fame; while they sought to prolong, during life, the personal friendships formed in the field of their glory and their sufferings? Say not, that all anxiety about the honorable remembrance and unfading gratitude of their countrymen, was superfluous—that the people of the United States could not forget them; nor delay to reward

them and their children liberally for the deliverance of their country. Public gratitude and justice are not always infallible. Too often the popular idol of to-day, eclipses wholly to the public eye, the hero or the patriot, who retired yesterday into the shade of private life. Some partial remuneration was indeed promptly bestowed upon the officers of the revolution, in the form of land-titles and half-pay. But before this heavy debt of justice was fully acknowledged and provided for, about forty long years, and most of them years of unparalleled national prosperity, were suffered to pass away. At last, when the revolutionary pension-law was enacted, a majority of the war-worn veterans had travelled, many of them in poverty and despair, beyond the reach of human reward. It was only a feeble remnant who lingered on the scene of their campaigns, long enough to taste before they died, the tardy justice of their country.

Nor is this all. When the revolutionary Congress decreed monuments to the fallen, and honorary distinctions for the achievements of the living; how long were many of these decrees left unexecuted? And how few honors of the sort, have to this day been bestowed upon the dead or the living heroes of our independence! This flourishing and mighty republic, ought ere now to have adorned and glorified herself with a hundred magnificent structures, to commemorate the events of her revolutionary history, and the fame of her patriotic founders. Gratitude called for these tokens of respect; a wise policy demanded, that the patriotism of the living should be stimulated by visible monuments of the glorious dead. Saratoga, should have been marked to every visitor, by her pyramid of everlasting granite; York-Town should have lifted her tall column high over the plains of Virginia, a land-mark to fill the navigators of the Chesapeake with inspiring reminiscences.

Why is not Trenton distinguished by some visible memento of the 25th of December, 1776; when Washington led his shoeless band, darkling, through ice and snow; and turned that midnight of despair, into the dawn of glorious victory? And why has there not been long since, even a stone erected on the plain of Princeton, to direct the traveller's eye to the spot where Mercer fell—when Washington by a second stroke of consummate skill, brightened the dawn of returning victory into a day of reviving confidence in his country's cause?

But that which above all justifies the apprehension of the Cincinnati, respecting the grateful recognition of their merits, after they should have retired from the field, is the fact, that this nation has never yet erected a monument to Washington; or what *would* be better, a joint monument, at the seat of government, to Washington and his compatriots. Yes: this nation has been content, for almost forty years, to let the bones of her chief hero and patriot, whose name is revered over half the globe, lie obscurely under the weeping willow of Mount Vernon! While our thankful patriotism expends itself in yearly declamations, which cost nothing, and have become stale by repetition!

What public authority neglected to do, a private association lately attempted; and after calling upon the nation for voluntary contributions, they at last reported the paltry sum of thirty thousand dollars—to erect a monument to Washington! So much did this

populous and wealthy republic, whose citizens spend millions a year for trifling gratifications, agree to contribute, once for all, to raise a monument to Washington, the Father of their country.

Let this shameful neglect be repaired. Let the fifteen millions of these six and twenty states, flourishing in peace and abundance, give due honor to the heroes and patriots of the departed generation, of two millions; who built the foundation of this great republic with their treasures and their blood. Build now their monuments. Let our citizens look upon them, and remember the times that tried the very soul of patriotism. Rear in the city of Washington the great revolutionary monument. Lay deep its foundation of rock; let art and genius try their utmost skill to raise it high above the dome of the capitol; to adorn it with the choicest sculpture, and to inscribe on its walls the story of the revolution, in letters and emblems to be read by a hundred generations. There, let the chieftain forms of the revolutionary heroes and sages meet the national eye. There, let the bones of Washington be entombed. There, in fine, let the embodied spirit of the revolution stand displayed, in the presence of the national government; to admonish our representatives, and to frown into shame and silence, the paltry selfishness of the day, and the impious threats of disunion.

THE LAST TREE ARTICLE.

"Last scene of all, to close this history."
Shakespeare.

My last paper was sent to you from the beautiful shades of Oakwood,—and contained a promise of another, to be dated in my own New England. That promise it is now my intention to redeem.

What a transition it was from those fine old oaks in Virginia, to the crowded thorough-fares, through which I had to pass on my way hitherward! It was indeed a change, and one, from the consequences of which I have not yet, even now, recovered.

"There, at the foot of yonder nodding beech,
That wreathes its old fantastic roots so high,
His listless length, at noontide, would be stretch,
And pore upon the brook that bubbles by."

Every thing seemed and still seems new,—and its novelty is harsh. The din of the rail-ways, the bustle of the over-crowded streets, the rush and riot of the city's constant moving mass,—how unlike the scene, where, for weeks before,

"— at peep of dawn,
Brushing, with hasty steps, the dews away,
I've met the sun upon the upland lawn!"

Deserted and disconsolate Mab! She could not share these reverses with him who had made her the partner of almost all his rural pleasures! She thrust her nose over the palings, and whinnied forth a not unmusical farewell, and as I was whirled away towards the town, she gazed wistfully after me, whose departure cut off so many of her innocent enjoyments. How Mab did enjoy the peach season! She ate the delicious fruitage from the weighed-down boughs by bushels, each rare-ripe, cling-stone, and melicacón separately, however,—as a well-bred lady should do: daintily detaching, with her deli-

cate lip, the juicy pulp from the rough stone, all as if she were discussing her dessert with a silver knife. Poor Mab! to whom is she now companion, among the breezy hills of old Fairfax? Of course, she well remembers yet her summer friend: methinks I see her "soft expressive face," saying, as plainly as a horse can speak,

"One morn, I missed him on the 'customed hill,
Along the heath, and near his favorite tree;
Another comes,—not yet beside the rill,
Nor up the lawn, nor at the wood, is he!"

Excuse this digression, my dear reader: but men and maes have feelings, you must be aware.

I have been quoting freely from Gray's fine *Elegy* in a Country Church Yard. A beautiful copy of this celebrated poem lies before me, as I write,—a book from which it is delightful to copy. Each stanza is appropriately illustrated in the most perfect manner by wood engravings, after designs of Charles Landseer, Thomas, his brother, Westall, Stothard, Cooper, Calcutt, Chalon, Wright, Cattermole, Mulready, Copley, Fielding, and other distinguished artists. It is a London book, and has a deserved celebrity. Each page is a separate gem, distinctly and beautifully set,—the touching tale being told as expressively by the painter, as by the poet: and

"—those rugged elms, that yew-tree's shade,
Where heaves the turf in many a mouldering heap,"

as well as

"Full many a flower, which, born to blush unseen,
Still wastes its sweetness on the desert air,"

being depicted therein with the most truthful and natural fidelity.

How touchingly does this rare poem draw wood-pictures! How breathes this stanza of the pure country air!

"Oft did the harvest to their sickle yield;
Their furrow oft the stubborn glebe has broke;
How jocund did they drive their team afield!
How bow'd the woods beneath their sturdy stroke!"

The custom of wood-felling always struck me as a barbarity. Reason has convinced me of the necessity of the case, but still it smacks of cruelty, as I view the matter. The trade of the butcher is innocent and respectable enough, so custom wills it to be esteemed: but only look at it in detail,—knocking down a fine ox, or cutting the throats of tender lambs, in cold blood: and yet I know more than one very gentlemanly butcher,—and I have known otherwise very good kind of people to order their oaks and maples felled, for firewood. You cannot imagine how paradoxical all this strikes me as being. But I have blown my blast against wanton wood-cutters already, in one of the earliest of these desultory papers,—and will give them now a respite—only suggesting to the legislators, whether or not it would be a constitutional enactment, to order that every man who fells a tree shall plant two, either in its or another place.

Old Herrick, (with whom I have already made quite free, in these articles,) has an apposite thought.

"All things decay with time; the forest sees
The growth and downfall of her ancient trees.
That reverend oak, which, threescore lustres, stood,

The proud dictator of the state-like wood,
Has bowed at last!"

Here is a beautiful simile, drawn from a kindred subject, by Habington, an English poet of the sixteenth century. Speaking of an old weather-beaten tar in Greenwich hospital, he says,

"Thus does he, like some gallant pine,
Famed for its travels on the sea,
Broken with storms and age, decline,
And in some quiet creek unnoticed rots away!"

At Oakwood, we had all kinds of oaks, as I have already told you in a former article. Among these, the willow oak was to me the greatest curiosity. Michaux gives a very minute account of this tree, which seems to have no great reputation, however, in the places where it grows. It is not so useful as the other varieties, and, as the "utile" is more of a consideration with our good people than the "dulce," it is ranked in every quarter as far beneath them all. It certainly is a singular freak of nature, however, and interests the naturalist who sees it for the first time. It bears an acorn, and this alone distinguishes it from the marsh willow, excepting when it grows to a larger size than any of this species ever does.

Apocryphos of willows. Johnson describes this tree as one, "whose branches are worn by forlorn lovers:" and Virgil in his *Eclogues* tells us that willow is a badge of mourning for shepherds. Byron has these lines:

"On the willow thy harp is suspended,
Oh Salem! Its sounds should be free!
And the hour when thy glory was ended,
But left me that token of thee!"

But it was not always an emblem of sadness. At the feast of "first fruits," it was borne in triumph. "Ye shall take, on the first day," said Moses, in *Leviticus*, "the boughs of goodly trees, branches of palm, and boughs of thick leaves, and willows,—and so shall you rejoice!"

There is but one poet worthy of a coronal of oak-leaf, as The Poet of Trees,—and he is our countryman. His splendid poem, entitled "Forest Hymn," entitles him to this meed. The whole of it might well be copied here, in proof: but it is too well known and too easily accessible to be allowed such space in this closing paper of my series as it would occupy. Read it, reader, if thou hast not; and, if thou hast, read it yet once more,—blend it with thy memory's strongest associations, and, with the poet,

"—meditate
In those calm shades God's glorious majesty,
And, to the beautiful order of His works,
Learn to conform the order of thy life!"—Bryant.

Accept his invitation,—

"Thou, who wouldst see the lovely and the wild
Mingled in harmony on Nature's face,
Ascend our Rocky Mountains. Thou shalt look
Upon the green and rolling forest-tops,
And down into the secrets of the glens,
And streams, that, with their bordering thickets, strive
To hide their windings."

Go with him to the glen, where, he tells you

"The fragrant birch above him hung
Her tassels in the sky,

And many a vernal blossom sprung
And nodded careless by."

Follow him, and

"—know where the timid fawn abides,
In the depths of the shaded dell,
Where the leaves are broad, and the thicket hides,
With its many stems and its tangled sides,
From the eye of the hunter, well!"

What he tells you is true: that,

"When our wide woods and mighty lawns
Bloom to the April skies,
The earth hath no more gorgeous sight
To show to human eyes."

He will show you,

"—— tokens
Of ages long ago,—
Our old oaks stream with mosses,
And sprout with mistletoe:
And mighty vines, like serpents, climb
The giant sycamore;
And trunks, o'erthrown for centuries,
Cumber the forest-floor."

He will lead you to the woodland fastnesses of brave
Marion's men, and teach you their wild song;

"Our fortress is the good green wood,
Our tent the cypress tree,—
We know the forest round us,
As seamen know the sea!
We know its walls of thorny vines,
Its glades of reedy grass,
Its safe and silent islands
Within the dark morass!"
"The woodland rings with laugh and shout,
As if a hunt were up:
And woodland flowers are gathered,
To crown the soldier's cup.
With merry songs we mock the wind,
That in the pine-top grieves,
And slumber, long and sweetly,
On beds of oaken leaves."

He will tell you when 'tis the better time to woo:

"—— when autumnal dyes
Tinge the woody mountain:
When the drooping foliage lies
In the choked up fountain."

And, as you rove with him,

"Ere, in the northern gale
The summer tresses of the trees are gone,
The woods of autumn, all around the vale,
Have put their glory on.

Amid the woods that crown
The upland, where the mingled splendors glow,
Where the gay company of trees look down,
On the green fields below,"—

With him you will own, that

"'Twere a lot too blest
Forever in those colored shades to stray;
Amidst the kisses of the soft southwest,
To rove and dream for aye;

And leave the vain low strife
That makes men mad, the tug for wealth and power,
The passions and the cares that wither life,
And waste its little hour."

Henry Longfellow's is a kindred spirit with that of
Bryant, and breathes, at times, most eloquently and
touchingly, with the true inspiration of the forest. He
describes the Spirit of Poetry, as moving

"In the green valley, where the silver brook,
From its full laver, pours the white cascade,
And, amid the silent majesty of the deep woods,
Its presence shall uplift the thoughts from earth,
As to the sunshine and the pure bright air
Their tops the green trees lift."

He says, elsewhere, that the old and

"—— gifted bards
Have ever loved the calm and quiet shades.
For them there was an eloquent voice in all
The sylvan pomp of woods,—the golden sun,—
The flowers,—the leaves,—the river on its way,—
Blue skies,—and silver clouds,—and gentle winds,
The swelling upland, where the sidelong sun
Aslant the wooded slope, at evening, goes,"—&c. &c.

This is a beautiful picture, and brings back Oakwood
scenes most vividly. There is a broad belt of woods
stretching far from south to north, upon the crest of a
green slope, behind which the sun sets slowly and redly
at the close of a hot summer day. Farther down the
hill is a hedge-row, beneath which it was delightful to
sit, and watch the gradual decline of the fiery orb, even
after its yellow beams were hidden, from the view: for
the long and regular shadow of the whole woody mass
seemed to come gradually creeping nearer and nearer
to my feet, until there was no brightness left but that
reflected from the sunken sun upon the rich masses of
cloud, that hung, like curtains of purple and gold, over
the green wood-tops. But I was quoting Longfellow:
and here is another of his woodland pencillings. How
touchingly appropriate to the rich scene of sylvan beauty
spread out before me as I write!

"There is a beautiful spirit breathing now
Its mellow richness on the clustered trees,
And, from a beaker full of richest dyes,
Pouring new glory on the autumn woods,
And dipping in warm light the pillared clouds.
Morn, on the mountain, like a summer bird,
Lifts up her purple wing; and, in the vales,
The gentle wind,
Kisses the blushing leaf, and stirs up life
Within the solemn woods of ash, deep crimsoned,
And silver beech, and maple, yellow leaved,—
Where autumn, like a faint old man, sits down,
By the wayside, weary."

"Oh what a glory doth this world put on
For him, who, with a fervent heart, goes forth
Under the bright and glorious sky, and looks
On duties well-performed, and days well spent!
For him the wind, ay, the yellow leaves,
Shall have a voice, and give him eloquent teachings;
He shall so hear the solemn hymn, that Death
Has lifted up, for all, that he shall go
'To his long resting-place without a tear!"

Perhaps after this I ought to recall what I said of Bryant,
as the *only* American wood-poet:

"Let both divide the crown!"

Peabody of New England has a truthful pen, when
writing of such subjects.

"God of the forest's solemn shade!
The grandeur of the lonely tree
That wrestles singly with the gale,
Lifts up admiring eyes to thee!
But more majestic far they stand,
When, side by side, their ranks they form,—
To wave on high their plumes of green,
And fight their battles with the storm!"

But I must draw this lengthening paper to a close.

A mass of pencilled passages, marked in my books, lying around my desk, by numerous *dog's-ears*, offer themselves for quotation, but I must limit my selections. I have been writing in the midst of all a New England autumn's glory. October in Massachusetts is the most picturesque of all the months. The harvest is in,—the orchards are yielding up their red and golden fruitage,—the brown and polished chesnuts are falling from their husks,—the oaks are shedding their brown cupped acorns,—the maple, the ash, the low sumac are putting on their brilliant coloring, the hectic glow that tells of speedy decline, and early death,—and, as Bryant says,

"The melancholy days are come,—the saddest of the year!"

Yet why are they called "melancholy"?

"What is there saddening in the autumn leaves?
Have they that green and yellow melancholy
That the sweet poet spoke of? Had he seen
Our variegated woods, when first the frost
Turns into beauty all October's charms,
When the storms
Of the wild Equinox, with all its wet,
Has left the land, as the first deluge left it,
With a bright bow of many colors hung
Upon the forest-tops,—he had not sighed."

Brainerd.

It is now the time of "The Hunter's Moon," and, to quote this sweet poet once more,

"The moon stays longest for the hunter now,—
The trees cast down their fruitage, and the blithe
And busy squirrel hoards his winter store:
While we enjoy the breeze that sweeps along
The bright blue sky above us, and that bends
Magnificently all the forest's pride,
Or whispers through the evergreens, and asks,
'What is there saddening in the autumn leaves?'"

William Howitt, the husband of Mary, that sweet poetess, in his "Book of the Seasons," discourses with all the fondness of a true naturalist, of woods. He says, "Ariosto, Tasso, Spenser, Shakspeare, and Milton, have sanctified them to the hearts of all generations. What a world of magnificent creations comes swarming upon the memory as we wander in woods! The gallant knights and beautiful dames, the magical castles and hippogriffs of the Orlando; the enchanted forest, the Armida and Erminia of the Gerusalemme Liberata; 'Fair Una, with her milk-white lamb,' and all the satyrs, Archimagas, the fair Florimels and false Duessas of the Faery Queene; Ariel, and Caliban, Jacques, and the motley fool in Arden, the fairy troop of the Midsummer-Night's Dream, Oberon, Titania, and that pleasantest of all mischief-makers, ineffable Puck,—the noble spirits of the immortal Comus. With such company, woods are to us any thing but solitudes. What wisdom do we learn in the world, that they do not teach us better? What music do we hear like that which bursts from the pipes of universal Pan, or comes from some viewless source with the Æolian melodies of Faery-land? Whatever woods have been to all ages, to all descriptions of superior mind, to all the sages and poets of the past world, they are to us. We have the *varied whole* of their sentiments, feelings and fancies, bequeathed as an immortal legacy, and combined and concentrated for our gratification and advantage,—besides the innumerable pleasures which modern art has thrown to the accumulated wealth of all antiquity."

Again, he asks—"What can be more beautiful than trees? Their lofty trunks, august in their simplicity, asserting to the most inexperienced eye, their infinite superiority over the imitative pillars of man's pride; their graceful play of wide-spreading branches; and all the delicate and glorious machinery of buds, leaves, flowers, and fruit, that, with more than magical effect, burst forth from naked and rigid twigs, with all the rich and brilliant colors under heaven; breathing delectable odors, pure, fresh, and animating; pouring out spices and medicinal essences; and making music, from the softest and most melancholy undertones to the full organ-peal of the tempest. I wonder not that trees have commanded the admiration of men, in all nations and periods of the world. What is the richest country without trees? What barren and monotonous spot can they not convert into a paradise? Xerxes, in the midst of his most ambitious enterprise, stopped his vast army to contemplate the beauty of a tree," &c.: and so he goes on in a strain which impels the wish on my part that Messenger articles might be extended, *ad libitum*, and that your readers could have the whole of this delicious essay spread before them. One passage more, beautiful and timely, I must transcribe.

"It is in this month, [October,] that woods may be pronounced most beautiful. Towards the end of it, what is called the *Fading of the Leaf*, [with us, *The Fall*,] presents a magnificent spectacle. Every species of tree, so beautifully varied in its general character, the silver-stemmed and pensile-branched birch, the tall smooth beech, the wide-spreading oak and chesnut, each develops its own florid hue of orange, red, brown, or yellow, which, mingling with the green of unchanged trees, or the darkness of the pine, presents a *tout ensemble* rich, glowing, and splendid. Yet, fine as our woods are at this season, far are they exceeded by those of America; the greater variety of trees, and the greater effect of climate, conspiring to render them in decay gorgeous and beautiful beyond description."

Before this last of my lucubrations is turned to type, all this will have experienced a yet more striking change. The last leaf of the trees, the foliage of which falls at all, will have been whirled from their branches by the cold wintery winds, and the gigantic arms of the forest will be bared to the howling blasts that will shriek shrilly among them. The evergreens will retain a portion of their verdure, duller, however, than the summer tinting. Holly and mountain ash will alone keep their red berries, and some few faded leaves will cling with desperate tenacity to their brown branches. May the season prove one of undiminished comfort to all who have accompanied me in these my woodland rambles! May the "Christmas chimes" sounding merrily in their ears, welcome them to good cheer and happy fireside enjoyments: and among their chosen topics of reflection, may the beauties and wonders of nature find a prominent place. May they cultivate a taste, which every American should peculiarly cherish, as a sure source of the richest enjoyment, and the highest mental and moral improvement,—the taste for forest-trees. Our own Irving, of whom two worlds are justly proud, says truly that "there is something simple, and noble, and pure, in such a taste." It argues a sweet and generous nature to have this strong relish for the beauties of vegetation, and this friendship for

the hardy and glorious sons of the forest. There is a grandeur of thought connected with this part of rural economy. It is, if I may be allowed the figure, the heroic line of husbandry. It is worthy of liberal, and freeborn, and aspiring men. He who plants an oak, looks forward to future ages, and plants for posterity. Nothing can be less selfish than this. He cannot expect to sit in its shade, nor enjoy its shelter: but he exults in the idea, that the acorn which he has buried in the earth shall grow up into a lofty pile, and shall keep on flourishing, and increasing, and benefitting mankind, long after he shall have ceased to tread his paternal fields.

"Indeed, it is the nature of such occupations to lift the thoughts above mere worldliness. As the leaves of trees are said to absorb all noxious qualities of the air, and breathe forth a purer atmosphere, so, it seems to me, as if they drew from us all sordid and angry passions, and breathed forth peace and philanthropy. There is a serene and settled majesty in woodland scenery that enters into the soul, and dilates, and elevates it, and fills it with noble inclinations."

Indulgent reader, farewell!
Newburyport, Oct. 7th, 1839.

J. F. G.

BOTANICAL NOTICES OF INTERESTING PLANTS.

DIONCEA MUSCIPULA, OR VENUS' FLY-TRAP.

This vegetable curiosity, of which we propose to give a short description, is peculiar to the southern states. It grows in great abundance around Wilmington, N. C.; extending as far north as Newbern, and from the mouth of the Cape Fear nearly to Fayetteville. Hitherto the observations of botanists have pointed out but few localities. Elliott says, on the authority of Gen. Pinckney, that it grows in South Carolina on the lower tributaries of the Santee. Audubon also found it in Florida of enormous size. It is therefore probable that it inhabits the savannahs more or less abundantly, from the latter place to Newbern.

The leaf, which is the only curious part, is *radical*, and spreads upon the ground, or at a little elevation above it. It is composed of a *petiole* or stem with broad margins, from two to four inches long, several of which surround the parent stalk. To the extremity of this stem is articulated a thick, circular leaf, fringed around on its edges with somewhat rigid *ciliae*, or long hairs like eye-lashes. From either side or hemisphere of the leaf, which is a little concave within, proceed three or four delicate, hair-like organs, interlacing with each other. These are arranged in such an order that an insect can hardly traverse its surface without interfering with the *sensitive rights* of one of these faithful sentinels, which instantly causes the two portions of the leaf to suddenly collapse, and enclose the little intruder with a force surpassing its efforts to escape. The irritability of the leaf, resides *only in these capillary processes*; as it may be touched in any other part without perceptible effects. The little prisoner is not immediately crushed and destroyed, as is sometimes supposed, but is held in "durance vile" until it ceases to struggle; after which the two portions of the leaf gradually un-

fold to the sun, prepared to ensnare some other roving and unfortunate adventurer.

It is probably beyond the bounds of our philosophic scrutiny to determine the final purpose of this singular organization. Whether it is constructed to answer some important end in the economy of the plant itself; or made in accordance with that *law of diversity* which is a leading principle in all the productions of nature, are questions involving much close and accurate observation for their solution.

The generic name *Dioncea*, is derived from *Dione*, one of the titles of *Venus*, on the account of the elegance and delicacy of its flowers, and its peculiar faculty of ensnaring—a trait of character chargeable upon the ancient goddess, and not unfrequently attended with a similar train of *fatal* and *heartbound* consequences.

ILEX VOMITORIA, OR SOUTH-SEA-TEA.

The popular designation of this species of *Holly* is *Yaupon* or *Yopon*, a name of Indian origin. It is also sometimes called *Cassena*. As not only our colonial, but even our *botanical* history is indebted for much of its *originality* and *peculiar interest*, to the aborigines of our country, we will briefly trace the Indian source of authority for the use of the favorite *Yopon*. "The savages of Carolina," says Lawson, an old author of much credit, "have this tea in veneration above all the plants they are acquainted withal, and tell you the discovery thereof was by an infirm Indian, that labored under the burden of many rugged distempers, and could not be cured by all their doctors; so, one day, he fell asleep, and dreamt that if he took a decoction of the tree that grew at his head, he would certainly be cured; upon which he awoke, and saw the *Yaupon* or *Cassena Tree*, which was not there when he fell asleep! He followed the direction of his dream, and became perfectly well in a short time." This traditional origin, the intelligent reader will recognise as an ingenious specimen of Indian sagacity, to secure venerated sanction for the use of a favorite article. In another amusing relic of the last century, (Brickell's "Natural History of North Carolina,") the author says, "it is the plant whereof the tea is made, so much in request among both the Indians and christians." It is still used by the "christians" or *whites* wherever it grows, and is said to make, if well cured, a very pleasant beverage—preferred by many even to the "beloved tea" of China, and you know—*de gustibus non disputandum*.

A BACKWOODSMAN BOTANIST.

BAPTIST VINCENT LAVALL—an Inquiry.

Mr. White,—In the year 1809, the schooner *Otter*, Capt. Niles, on a voyage for furs from England, to the western coast of America, was lost below the mouth of Columbia river, and all on board perished. Baptist Vincent Lavall and three others, who were on shore hunting, owed the preservation of their lives to this circumstance. Not being taken off, they were obliged to travel to the United States on foot, crossing the Rocky Mountains and descending the Red River. Lavall's MS. account of their journey and adventures is still in existence, and it is thought would prove interesting at this period, when attention is becoming directed to the possessions of the United States on the Pacific. It has however been thought right first to ascertain whether Mr. Lavall is still living, and as your *Messenger* circulates extensively through the south western states, in one of which it is believed that Mr. Lavall afterwards settled, it has been judged the fittest medium for inquiring if he is still alive, and if not, the time and place of his decease; which inquiry it is hoped that editors who may see this note will repeat.

Philadelphia, 1838.

Yours respectfully,

D.
